European Maritime Safety Agency

/ European Maritime Safety Agency

**European Maritime Safety Agency  
- EMSA -  
in a nutshell**

EMSA's mandate refers to "ensuring a high, uniform and effective level of maritime safety, maritime security [...], prevention of pollution and response to pollution by ships within the Community"

Set up of EMSA under Regulation (EC) N<sup>o</sup> 1406/2002 of 27.6.2002

2

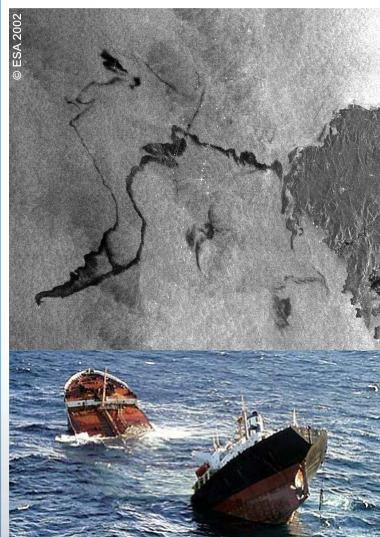

## Objectives of EMSA

Within the fields of maritime safety, pollution prevention from ships and ship security, EMSA has the following main objectives:

- To ensure the proper **implementation of EU maritime legislation** by Member States
- To foster **technical cooperation** and development and disseminate best practice
- To provide **technical advice** to the Commission and Member States
- To **provide assistance** to top-up Member States' capabilities for **oil pollution response**

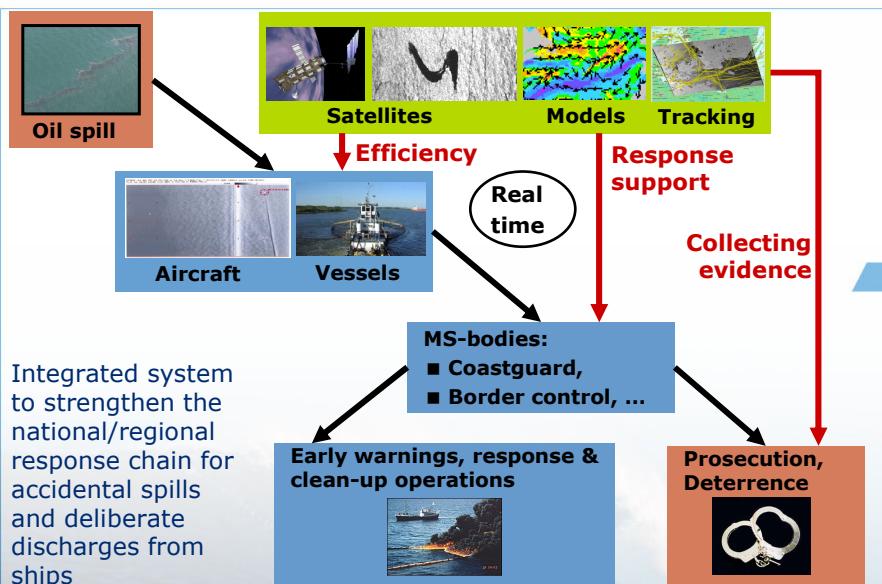

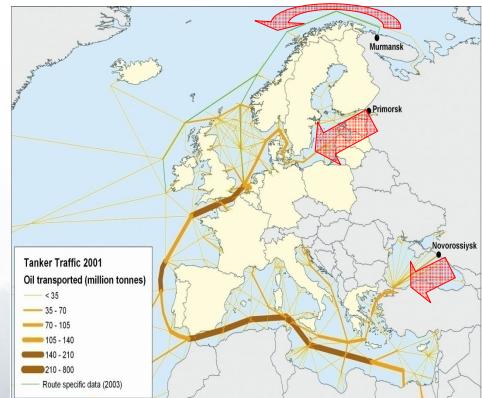

## Legal basis

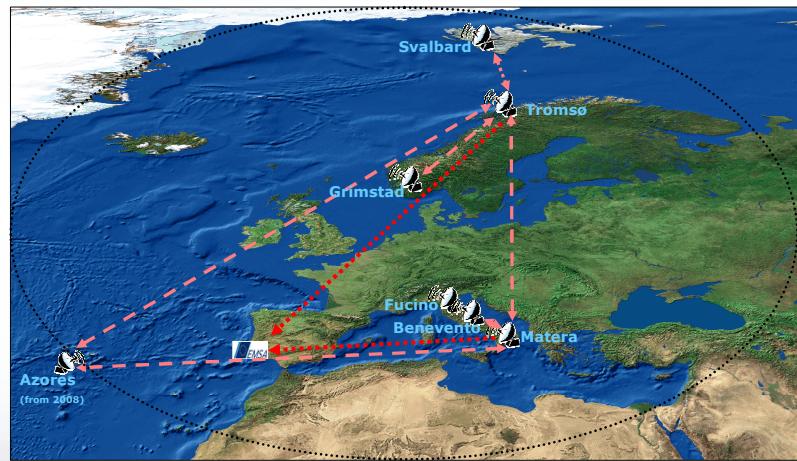

- Founding Regulation of EMSA:  
*...develop and operate any information system necessary for attaining the objectives of [the EU traffic monitoring] directive*
- EU Directive on ship-sourced pollution:  
*...providing technical assistance ... in actions such as tracing discharges by satellite monitoring and surveillance*
  - Regulation 1406/2002/EC, Article 2,d,ii
  - Directive 2005/35/EC, Article 10,2,a

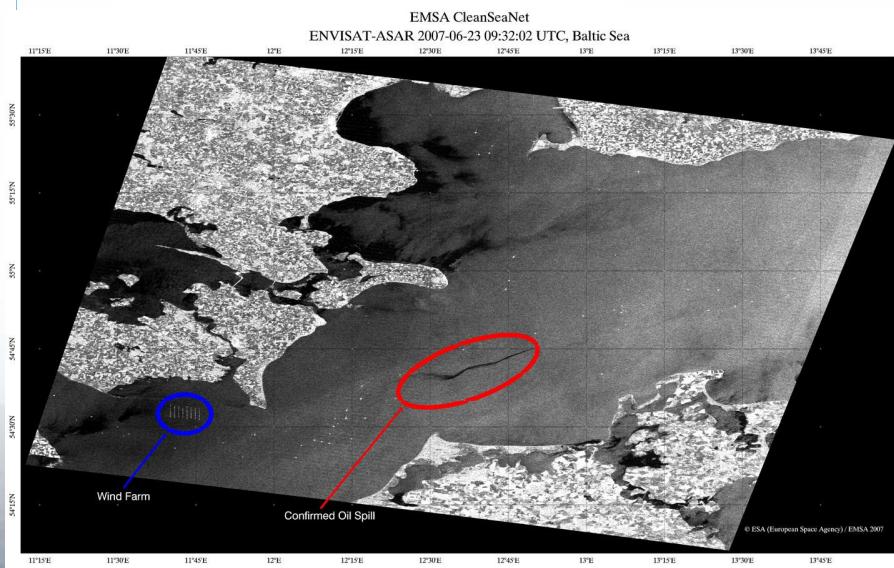

The "PRESTIGE"-case

Increase in maritime transport along European shipping routes

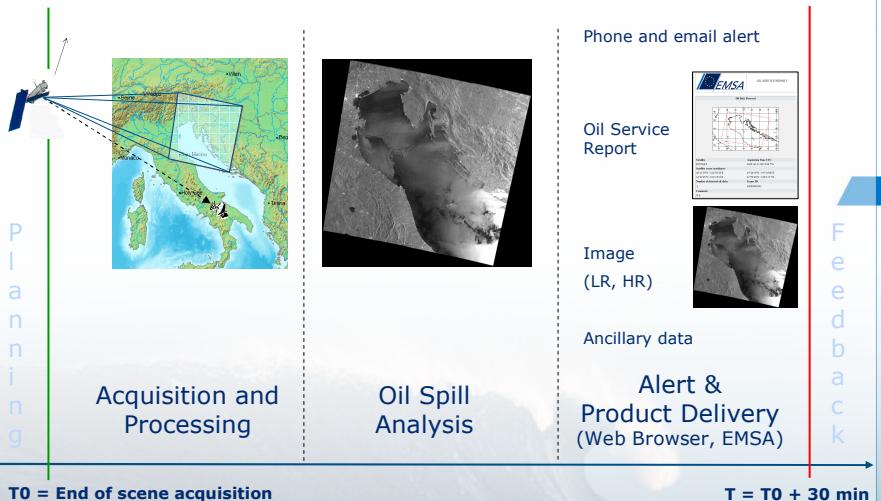

- In co-operation with the European Space Agency, Canadian Space Agency and European Industry
- **30 min. data delivery time**

## CleanSeaNet : Near Real Time service – 30 min.

## From R&D to operational services

### Institutional demands

- Int. agreements (e.g. MARPOL)
- European Directives and Regulations

### R&D

- National/Int. research EU Framework Program
- Shows feasibility
- Provide extended parameterisation capabilities
- Scientific
- Experimental/Pre-cursor systems

### PROJECTs

- To provide flexibility

demands

solutions

### Operational services

- Focus on system stability
- NRT services
- „One-stop-shop“
- Constant quality
- Sustainability

### PROCUREMENTs

- To ensure quality

9

10

## Service evolution life cycle

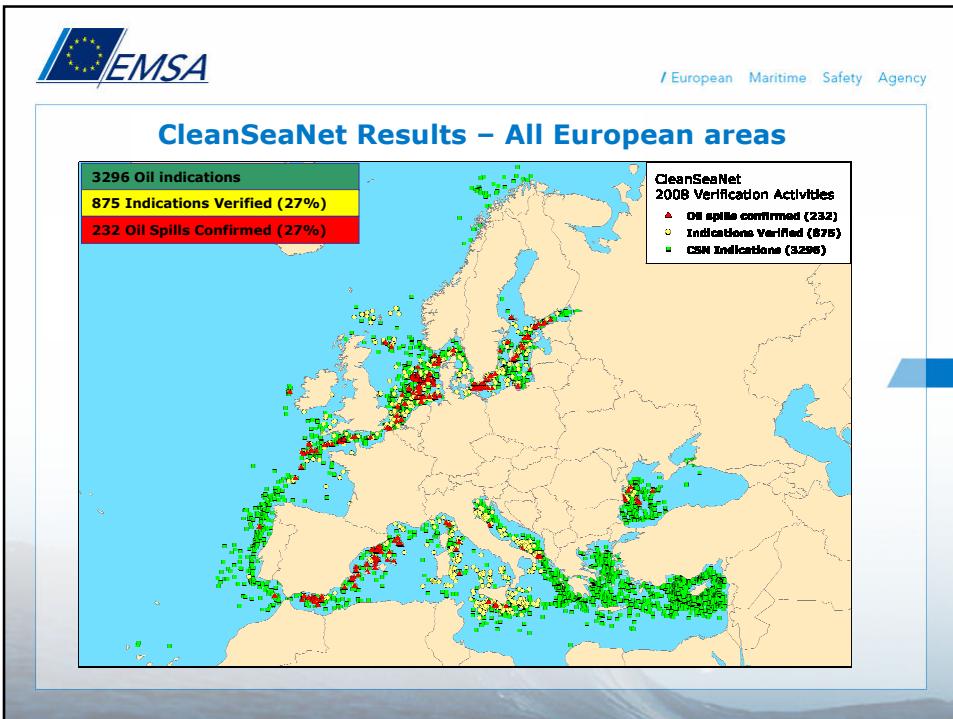

11

## What we have achieved

- European standardised service
  - Covering all European waters
  - Comprehensive information easy to access
- Sustainability
- Cost Sharing
  - Sharing of images between EU Member States
  - Economy of scale
- Co-Operation
  - "Oil spill surveillance is a cross border activity"
  - Mutual benefits for coastal states

12

## 2. LRIT (Long Range Identification and Tracking)

International, world-wide system of **Communication Satellite networks** receiving positioning information from ships.

Ships link to a LRIT Data Centre, where every 6 hours messages are collected.

15

### Legal basis

- IMO SOLAS Chapter V Reg 19-1
- Council Resolution of 2 Oct 07 and 9 Dec 08
- Directive 2009/17/EC

EU LRIT DC

## LRIT: for safety, security, SAR and environmental protection

- Flag state
  - Receives 4 messages per day on the position of its vessels worldwide, higher frequency possible
- Coastal state
  - Receives the position of all vessels within 1.000 nautical miles of its coast (through its LRIT Data Centre)
- Port state
  - request the position of a vessel (or vessels) coming to its port(s) based on Notice of Arrival
- SAR
  - request LRIT information in relation to the SAR

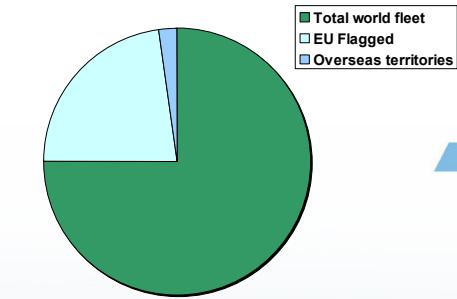

16

## Significance of EU LRIT Data Centre Operational since June 2009

- **EU Flagged ships**
  - ✓ Approximately 10 000 vessels
- **Overseas territories**
  - ✓ Approximately 1000 vessels

Status Sept. 2009:  
7025 ships in EU DB

Status Sept. 2009:  
7025 ships in EU DB

EU LRIT DC to cover about  
25% of world's fleet

**35 EU/EFTA states, Overseas Territories and third  
countries participating**

EU LRIT DC  
position  
information

Malta flagged ships around the world: positions at 20091013 – 1140 UTC

### 3. SafeSeaNet

- A data exchange network and a standardisation of the main information available on ships (all flags) and their cargo
- Providing a clear picture of traffic in EU coastal waters, with an improved monitoring of ships in transit (position update at 6 min. interval)
- EU shore-based network of AIS stations receiving automatic identification radio messages from ships (on board AIS) and Mandatory Reporting Systems (MRS)
- Reporting of incidents and accidents at sea
- Development started in 2004, latest version operational since June 2009

19

#### Legal basis

EU Vessel Traffic Monitoring Directive 2009/17/EC

CleanSeaNet - 4th User Group Meeting - 2 December 2008

### SafeSeaNet information sources/users

#### Data providers

- AIS: on board AIS and shore based networks
- Ships' movements and cargoes: ships' masters, owners, agents
- Incidents and accidents reporting: VTS's, MRCC's, Port Authorities, Coast Guards, Pollution survey centres

#### Data users

- 2326 authorities participating in SafeSeaNet from all Member States
- 556 authorized users having direct access to information

The map illustrates the distribution of European AIS Coastal Stations in March 2008, categorized into three main regions:

- North Sea Region:** Located in the northern part of the continent, including the North Sea and parts of the Baltic Sea.
- Baltic Region:** Located in the eastern part of the continent, including the Baltic Sea and surrounding landmasses.
- Mediterranean Sea Region:** Located in the southern part of the continent, including the Mediterranean Sea and surrounding landmasses.

Approximate number of stations in March 2008:

- North Sea Region: 200 stations
- Baltic Region: 150 stations
- Mediterranean Sea Region: 377 stations
- Total: 727 stations

Key countries labeled on the map include:

- North Sea Region: Iceland, Norway, Sweden, Finland, Estonia, Latvia, Lithuania, Poland, Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Greece, Malta.
- Baltic Region: Sweden, Norway, Finland, Estonia, Latvia, Lithuania, Poland, Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Greece, Malta.
- Mediterranean Sea Region: Portugal, Spain, France, Italy, Malta, Greece, Turkey.
