#### FISHERIES

# JURISDICTIONAL WATERS IN THE MEDITERRANEAN AND BLACK SEAS

## STUDY

#### Content:

Due to their geographical features, maritime jurisdictions in the Mediterranean and Black Seas are particularly complex. The number of states and their relative positions create new boundaries that impact on coastal states' and third countries' access to use of the living resources. This study describes and analyses the jurisdictional structure of these two basins and the possible impacts on fishing activity.

## SUMMARY

The way in which states' declare their maritime jurisdictions in the Mediterranean and Black Seas reveals not only the image and iconography of a new territorial and political reality but also the formal – geographical – factors on which it is constructed, and some of the reasons behind the territorial disputes and tensions.

The political shape of the Mediterranean region is characterised by a clear division between the north and south coasts, the first comprised, to a large extent, of EU Member States, thus implying greater cohesion and the existence of common policies, and the latter (the North African coast) with a weak political structure. Nonetheless, in terms of the maritime map, national interests predominate both north and south, with a resulting mosaic of jurisdictions that facilitates neither bilateral nor multilateral agreements.

In the Black Sea, despite the fact that the Russian Federation continues to maintain economic links with the region's states, a Western-looking geopolitical dynamic has emerged in recent years that has resulted in the more active involvement of the European Union.

The legal framework of the UN Convention on the Law of the Sea [UNCLOS] (1982) provides jurisdictional structure to the maritime space. UNCLOS defines a number of territorial spaces that may wholly or partly be proclaimed by coastal states. The main territorial forms that national jurisdiction of the maritime space may take are as follows: internal waters, territorial sea and contiguous zone, continental shelf and exclusive economic zone. Waters located beyond the jurisdiction of the states are defined as the 'high seas'; seabed and subsoil not subject to state jurisdiction is known as the 'area'. Alongside the jurisdictional spaces defined in UNCLOS, the coastal states of the Mediterranean Sea have also established fisheries protection zones and ecological protection zones.

The limited size of the Mediterranean Sea is such that if the states were to claim full jurisdiction of their waters, the whole sea would be under national jurisdiction. Some states have not proclaimed their sovereign rights, however, and this means that a considerable proportion of the waters do in fact remain high seas. In the Black Sea, in contrast, all the waters are under the jurisdiction of the different coastal states.

The delimitation between different jurisdictions in the Mediterranean gives rise to what could be termed a 'jurisdictional asymmetry', a consequence of the heterogeneous nature of the legal systems of adjacent jurisdictions: exclusive economic zone, fisheries areas, fisheries protection zones and ecological protection (González Giménez, J., 2007).

Seen from another perspective, when coastal states declare their jurisdictional rights by means of any of the above concepts, this implies a greater responsibility on their part for resource and environmental conservation. Hence the suggestion to extend states' jurisdictional rights beyond the territorial sea, as a management and conservation mechanism that would ensure effective governance of the Mediterranean basin.

Given its hydrological and climatic features, the biological productivity of the Mediterranean as a whole, measured in terms of its primary production, is less than that of most oceanic areas. There are some exceptions, such as the Adriatic, the Gulf of Lion and the southern Aegean which, due to the magnitude of average nutrient concentrations, are of greater primary productivity (AEM, 2000). Primary productivity in the Black Sea is greater than in

the Mediterranean, the most productive areas being the coastal waters around Ukraine, Romania and Bulgaria.

In addition, the Black Sea and the Mediterranean Sea are the source of a number of different disputes between coastal states. Some of these are historic in nature; in others the process of extending sovereignty over their maritime space has given rise to new disputes between states, caused by overlapping jurisdictions and the creation of new boundaries.

Governance in the Mediterranean and Black Seas takes place at different levels, depending on the jurisdictional structure of the maritime space – with responsibilities on the part of coastal and third countries – and the different levels of political-administrative (supra-national, regional, sub-regional) organisation.

## 1. INTRODUCTION

This study follows the technical specifications for production of the document 'Jurisdictional waters in the Mediterranean and Black Seas' (IP/B/PECH/IC/2009-087). Its focus and content is not strictly legal, instead offering a geographic vision and interpretation of the jurisdictional decisions made by coastal states. The way in which states are now projecting their national sovereignty over the maritime space is resulting in a new political geography: new territories and consequently new boundaries, meaning - in turn - a new framework of relationships between political players. All these circumstances are determining the use of the maritime space and, with regard to the object of this study, the fishery resources.

This document is structured into five sections (Introduction; Geographical, Political and Jurisdictional Framework; Jurisdictional Waters; Disputes; Governance) and draws on numerous graphics (maps, graphs and tables) accompanied by clear and concise text, along with an analysis that will contribute to supporting fishery management initiatives in the Mediterranean Basin and the Black Sea.

Part of the material on which this present study is based comes from two current research projects (SEJ2007-66487/Ministry of Science and Innovation, Spain; SEJ-02654/Autonomous Government of Andalucía, Spain). Both projects will contribute to a better understanding of the maritime geography of the Mediterranean and Black Seas.

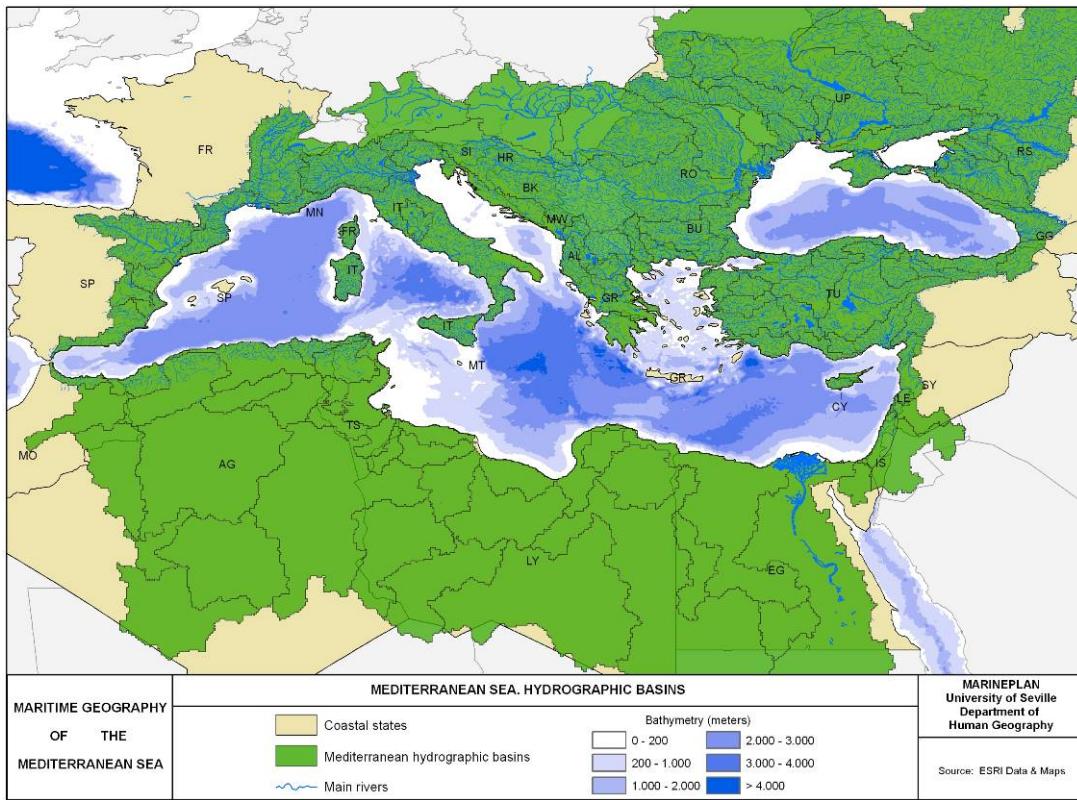

## 2. GEOGRAPHICAL, POLITICAL AND JURISDICTIONAL FRAMEWORK

The Mediterranean/Black Sea region is best described in terms of its position as a crossroads: both geographically, socio-culturally and politically. This section aims to provide an overview of the basic geographical and political structure of both basins, as it is within this structure that the maritime dimension and its jurisdictional formalisation are to be found.

### 2.1. PHYSICAL GEOGRAPHY

The Mediterranean and Black Seas from two interlinked basins, each nonetheless with their own specific features and identities. This is why some literature treats them as separate entities while some considers them together as a single unit.

**Map 1: River basins of the Mediterranean and Black Seas**

The morphology of the northern coast of the Mediterranean is made up of numerous bays, peninsulas and islands. In the basin as a whole there are more than 5 000 islands and islets; 4 000 of these islands are less than 10 km<sup>2</sup> in size and 162 of them are larger than this (IUCN, 2009). Corsica, Sardinia and the Balearics are the most well-known in the west, and Cyprus, Crete and Rhodes in the east. Sicily and Malta are located in the centre. The Aegean Sea contains more than 700 islands and islets, forming a large archipelago.

The Mediterranean Sea, which represents 1% of the world's oceans, is where the European, African and Asian continents meet. To the west it connects with the Atlantic Ocean via the Straits of Gibraltar (1 092 m deep) and, to the east, through the Dardanelles (91 m deep),

with the Sea of Marmara and, further still, through the Bosphorus (72.8 m deep), with the Black Sea. In addition, it is linked to the Red Sea via the Suez Canal (Map 1).

Covering an area of 2.5 million km<sup>2</sup>, the Mediterranean stretches 3 860 km from east to west and is 1 600 km across at its widest point, although opposite states (including their islands) are never actually more than 720 km (400 nautical miles) apart (Map 1). The Mediterranean is not generally very deep (1 500 m average), with a maximum depth of 5 150 m along the southern coast of Greece.

An underground barrier divides the Mediterranean between Tunisia and Sicily into two large basins: west and east. The western basin can be sub-divided into the Straits of Gibraltar, the Alboran Sea, the Balearics (Iberian Sea) and the Ligurian Sea. The eastern basin can be sub-divided into the Tyrrhenian Sea, the Straits of Sicily, the Adriatic Sea, the Ionian Sea and the Aegean Sea (Map 57) (IHO, 1953).

The Mediterranean coast, including the coasts of the only island state (Malta), along with the coasts of the islands that form part of continental states, measures approximately 45 000 km. This coast is, however, unevenly distributed between the coastal states, with four of them accounting for approximately 75% of the whole coast (Greece, Italy, Croatia and Turkey). Croatia is particularly notable due to the large number of islands that make up this country. In contrast, ten states, including Bosnia-Herzegovina, Monaco and Lebanon, have very small coastlines (González Giménez, J., 2007).

The Black Sea connects with the Sea of Marmara through the Bosphorus Strait (36 m deep on average), and into the Sea of Azov through the Strait of Kirch. The length of this sea from east to west is 1 150 km, with a maximum breadth of 600 km. With a total area of 463 000 km<sup>2</sup>, the Black Sea has maximum and average depths of 2 300 m and 1 240 m respectively.

There are no large islands in the Black Sea, the largest being Snake Island (Zmeiny), opposite the Danube Delta. The Black Sea coast measures some 4 340 km in length, being unequally distributed between the six coastal states that border it. Two states alone, Turkey and Ukraine, account for more than 60% of its length.

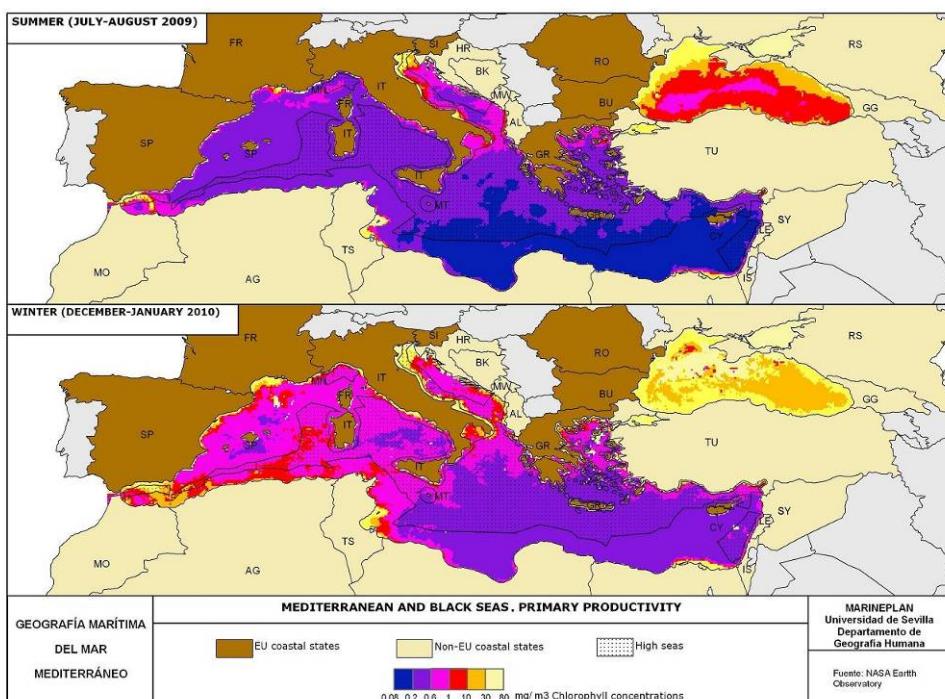

One of the differences between the Mediterranean and Black Seas lies in their river discharges. While few large rivers flow into the Mediterranean – the Ebro, Rodano and Po are notable on the north coast and the Nile on the south –, several large rivers flow into the Black Sea, including the Danube, Dniester, Dnieper and Don.

The Mediterranean forms a concentration basin in which the amount of water evaporating is greater than the rain and river water flowing into it. The consequent concentration of salts that occurs increases the density of the water, causing it to sink to the depths and flow into the Atlantic Ocean through the Straits of Gibraltar. This outflow of deep water from the Mediterranean is compensated by the entry of superficial water coming from the Atlantic. This continual interchange prevents a saturation of the ecosystem (MMRM, 2008). In addition, the Mediterranean water renews itself every eighty years. In contrast, rainfall and river discharge into the Black Sea exceed evaporation, hence forming a dilution basin.

Due to its hydrological and climatic features, the biological productivity of the Mediterranean as a whole, measured in terms of its primary production, is less than that of most oceanic areas. There are some exceptions, such as the Adriatic, the Gulf of Lion and the southern Aegean which, due to the magnitude of average concentrations of nutrients, are of greater primary productivity (AEM, 2000). Primary productivity in the Black Sea is greater than in the Mediterranean (Map 2), the most productive areas being the coastal

waters around Ukraine, Romania and Bulgaria. However, eutrophication<sup>1</sup> has caused increased hypoxia (lack of oxygen) in some areas, which is seriously threatening the coastal waters of the north-east. It was estimated that, over the period 1972 - 1990, approximately 5 million tonnes of fish were lost from that area (Zaitsev, 1992).

### Map 2: Primary productivity in the Mediterranean and Black Seas

In general, the breadth of the continental shelf in both the Mediterranean and Black Seas is not very great, although there are some exceptions, around the estuaries of the main rivers (the Rodano in the Gulf of Lion and the Nile in the Levant Sea) or on the coasts of the Adriatic and Tunisia, and to the west of the Black Sea. The greatest biomass density can be found between 200 and 300 m down, but only 20% of the Mediterranean is of such depth (González Giménez, J., 2007). This explains the limitations to the development of large fisheries in these basins. The biodiversity of the Mediterranean Sea is nonetheless considerable: it contains 10% of higher forms of plant life and 18% of macroscopic animal species (Livre Bleu, 2009).

Although the primary productivity of the Black Sea is greater than that of the Mediterranean (Map 2), the eutrophication mentioned above has had an important transborder impact on the sea's biological diversity, as in the case of fishery resources, which have declined considerably over the last 30 years (COM(2001)615 final).

<sup>1</sup> '(...) an over-enrichment of the water bodies with organic matter, especially algae .... due to excessive nutrient loads' (COM(2001)615 final).

## 2.2. POLITICAL GEOGRAPHY

This section gives an overview of the basic political structure in the Mediterranean and Black Sea basins. The territorial morphology of these regions is such that an intricate web of political bodies, from the local to the international, has grown up around these basins, each with a share of the responsibility for governing the maritime space.

There are a number of different levels of political organisation existing within the above geographical context. The political framework of the Mediterranean and Black Seas is the result of an interaction of different levels of political organisation: supranational, transnational, national and subnational (Table 1). This structure is important insofar as each of these levels has tasks and responsibilities related to managing and governing the maritime coastal space.

**Table 1: Hierarchical structure of the political framework in the Mediterranean and Black Seas**

The states play a central role in the political configuration of these basins. Of the 21 Mediterranean coastal states, 11 are in Europe, five are in Africa and five in Asia (Map 3). The Black Sea is surrounded by six countries, three in Europe and three in Asia (Map 3).

### Map 3: Political map of the Mediterranean and Black Seas

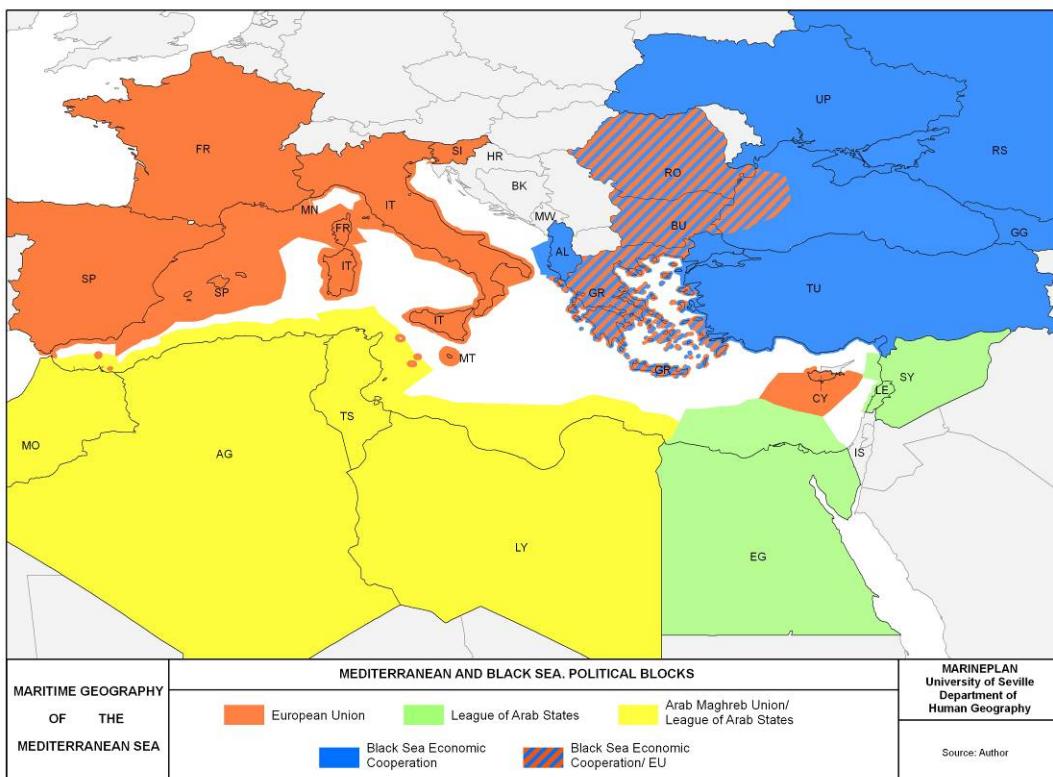

In addition to the states, various supranational entities have gained a growing importance as players with management roles over the maritime space, although there is a clear distinction between the Mediterranean and the Black Seas.

In the Mediterranean, there are obvious differences between the north and south coasts (Map 4); the former comprises mostly EU Member States while the latter has weak political cohesion due to the existence of entities such as the Arab League and the Arab Maghreb Union (Table 2).

In the Black Sea, while the countries of the east coast form part of the European Union, and the whole of the south coast comprises a candidate country (Turkey), the north-east and south-east coasts are made up of states that arose following the break-up of the Soviet Union, and these have fragile national institutions and virtually non-existent political cohesion (Table 2) (Map 4).

#### Map 4: Political blocks

Despite the Russian Federation maintaining economic links with the region's states, a Western-oriented geopolitical dynamic has taken hold in the Black Sea in recent years, resulting in the more active participation of the European Union. In addition, the creation in 1992 of the supranational Black Sea Economic Cooperation (BSEC), under the impetus of Turkey, has increased the common political and economic interest in the region (Marcu, S., 2006).

**Table 2: Supranational political organisations in the Mediterranean and Black Seas**

Supranational organisations	Purpose	No. of countries	Location
EU	Political-economic	11	Europe

Union for the Mediterranean **	Political-social-economic	43	Europe/Asia/Africa
Arab League	Political	7	Africa/Asia
Arab Maghreb Union	Economic	4	Africa
BSEC***	Political-economic	11	Eurasia

\*EEA: European Economic Area.

\*\* Union for the Mediterranean: former EUROMED (Euro-Mediterranean Partnership, was re-launched in 2008 as Union for the Mediterranean).

\*\*\* BSEC: Black Sea Economic Cooperation.

Source: Author.

On a supranational level, the recent (2008) creation, in Paris, of the Union for the Mediterranean (the official name of which is the Barcelona Process: Union for the Mediterranean - BP: UFM) must be noted. This is formed of 43 countries, 27 of them from the EU plus countries along the south coast of the Mediterranean (with the exception of Libya) and some of the Balkan states. This body has improved political, economic and social relations between the EU and the rest of the Mediterranean countries (Livre Bleu, 2009).

There is also a distinction between the Mediterranean and Black Seas in terms of their intermediary political institutions. On the one hand, the expansion and consolidation of the European Union has encouraged the creation of a web of intermediary-level political structures in the northern arc of the Mediterranean, for example the [Intermediterranean Commission](#), whose interaction and dialogue with other levels of government forms a more organised governance system. This contrasts with the south coast of the Mediterranean (North Africa), which is less structured at this intermediary political level (Table 3). This increases the gap between the two coasts in terms of their capacity to manage the marine environment.

**Table 3: Other supranational political entities in the Mediterranean and Black Seas**

Transnational organisations	Purpose	No of countries	Location
Intermediterranean Commission (CPMR)	Regional political	4	Europe
Balkan and Black Sea Commission (CPMR)	Regional political	11	Europe/Asia
Islands Commission (CPMR)	Regional political	6	

Source: Author.

In the Black Sea, Romania and Bulgaria's accession to the EU has encouraged the presence of intermediary-level political entities in the region. In addition, the European Union has promoted cooperation programmes and policies aimed at encouraging the region's development and cohesion. These initiatives are the [Neighbourhood Policy](#) (COM(2004)373 final), [EU-Russia Environmental Cooperation](#) (COM(2001)772 final), and the [Black Sea Synergy](#) (COM(2007)160 final). Apart from these activities, and with the exception of the Balkan and Black Sea Commission (Table 3), which the Russian Federation does not belong to, there is no other kind of intermediary-level political entity in the region, and this results in a lack of cohesion between the coastal states, diminishing their capacity to jointly manage the maritime spaces adjoining their waters.

The subnational and local political levels are represented in the Mediterranean and Black Seas by the coastal regions, provinces and local authorities. These bodies, by virtue of both their number (there are 45 coastal regions in Europe alone) (Table 4) and their tasks in relation to maritime coastal space management and administration, are ensuring a growing role for the sub-state level in the political structure of both basins and are consolidating the idea of multi-level governance in the region.

**Table 4: Territorial organisation of the Mediterranean and the Black Sea states**

Countries and territories	Regional level	Provincial level	Local level
Spain	17 Autonomous Communities	50 provinces	8 111 municipalities

The north-south asymmetry of the Mediterranean can also be seen in the existence of two distinct and greatly differing socio-economic and cultural models, the northern predominantly Christian arc and the southern almost exclusively Muslim one. The north comprises industrialised societies with democratic systems and the south, with the exception of Israel, is made up of developing countries. The north has a demographic structure marked by an ageing population while a demographic explosion in the south is encouraging migration. On top of this, the north has high or very high human development indicators and a per capita GDP which, in France, is more than USD 42 000 (Table 5); the

south, meanwhile, has average human development indicators, and the lowest per capita GDP in the basin (Egypt) is around USD 1 800 (UNEP/MAP, 2009 and World Bank, 2009) a year. All these factors are a source of instability and have a significant impact on the way in which political relationships interact in the Mediterranean.

**Table 5: Per capita Gross National Income 2008.**

There are also important differences between the coastal states of the Black Sea, primarily in socio-economic and cultural terms. First, this area is home to a convergence of Muslims and Christians of different denominations. Second, the geopolitics of the Black Sea is influenced by a superpower, the Russian Federation, and two regional powers, Ukraine and Turkey. To this must be added a number of territorial disputes, including between the Russian Federation and Georgia. Finally, there are economic disparities: four countries have high human development indicators (Romania, Russian Federation and Turkey), and two have average (Georgia and Ukraine). GDP in the basin varies from USD 9 620 in the Russian Federation to USD 2 470 in Georgia (World Bank, 2009) (Table 5).

### 2.3. JURISDICTIONAL FRAMEWORK

The legal framework of the UN Convention on the Law of the Sea [[UNCLOS](#)] (1982) provides jurisdictional structure to the maritime space. UNCLOS defines a number of territorial spaces that may wholly or partly be proclaimed by coastal states. The main **territorial forms** that national jurisdiction of the maritime space may take are: **internal waters (IW)**, **territorial sea (TS)** and **contiguous zone (CZ)**, **continental shelf (CS)** and **exclusive economic zone (EEZ)**. The waters located outside the jurisdiction of states are known as '**high seas**'; the seabed and subsoil not subject to state jurisdiction is known as the '**area**'. Alongside the jurisdictional spaces defined in UNCLOS, the coastal states of the Mediterranean have also established **fisheries protection zones (FPZ)** and **ecological protection zones (EPZ)**.

### **2.3.1. General comments**

The significant changes that the law of the sea has undergone in recent years have come about by means of a dual process: initiatives on the part of states or groups of states, alongside actions promoted by international institutions. The highest expression of the latter was the three UN conferences held in 1958, 1960 and 1973-1982. These international fora endeavoured to establish common rules, accepted by the majority, in which individual interests would be set within a regulatory framework. The current Convention was the result of the Third UN Conference on the Law of the Sea, held between 1973 and 1982 (text signed in Jamaica). It entered into force in 1994.

The historic development of principles governing the use and exploitation of the oceans has involved a constant tension between tendencies in favour of freedom and those in favour of exclusivity. The last phase of this process has once again been dominated by positions that favour exclusive rights, in a clear process of control of the oceans on the part of coastal states, which have gradually extended their sovereignty over ever larger areas.

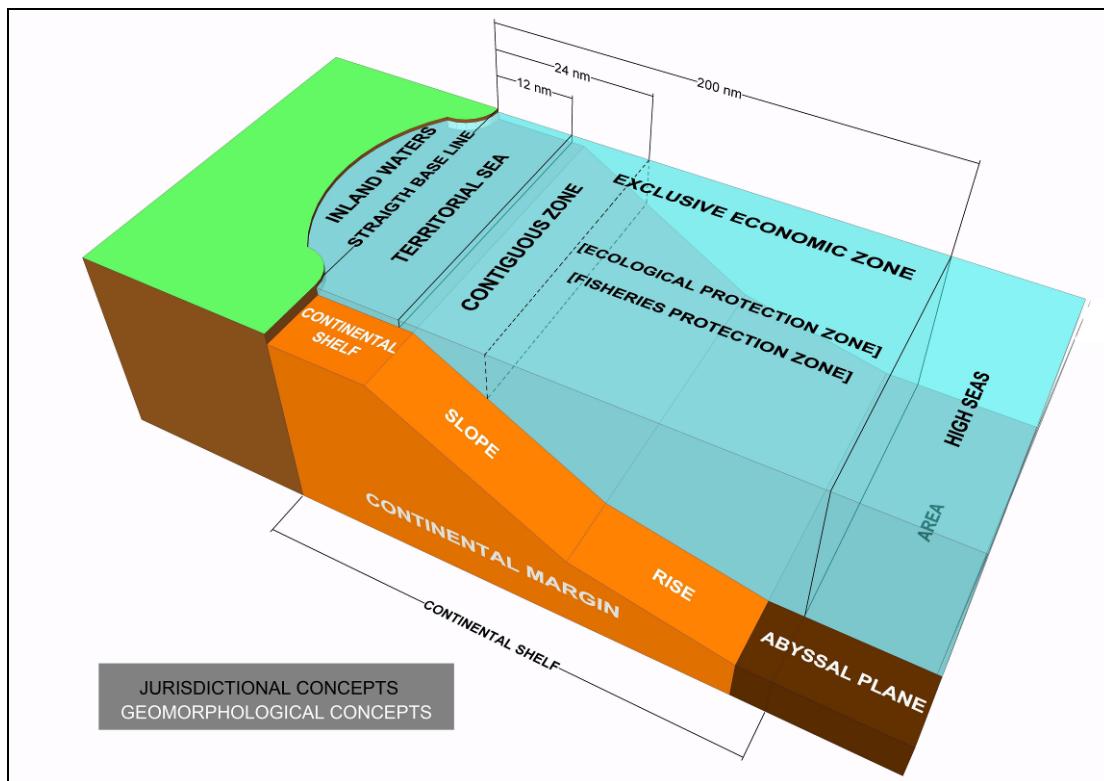

Given the changes taking place in resource exploitation (living and non-living), at the same time as UNCLOS entered into force (16 November 1994), two of its essential parts were amended: deep seabed mining (Part XI) and the preservation and management of straddling and highly migratory resources from the high seas, now subject to new regulations (4 August 1995).

Despite the fact that its small size means that any widespread extension of jurisdiction on the part of the coastal states of the Mediterranean would result in all of its waters falling under national jurisdiction, the (continuing) failure of some states to proclaim such sovereign rights has resulted in a large proportion of its waters remaining high seas. In the Black Sea, however, all of the waters are under the jurisdiction of the different coastal states.

#### **2.3.1.1. Types of maritime zone under national jurisdiction.**

The structure of the maritime territory according to UNCLOS has consolidated the nation state as the territorial basis on which the different jurisdictional spheres are defined and delimited, with the exception of the high seas and areas which are high seas through exclusion, i.e., those spaces located outside of the national jurisdiction (Figure 1).

When one of the state maritime jurisdictions given in UNCLOS is proclaimed, this is in the form of a unilateral declaration on the part of a state. An EEZ would thus be declared by means of a state law. However, each state's sovereign rights over the continental shelf are recognised without the need for a law enacting them. This is an important point as it is based on the assumption that all of the seabed belongs to one state or another while the legal regime governing the water column above it is dependent on a declaration being made by each state.

**Figure 1: Jurisdictional concepts**

Source: Author.

- **Normal baseline (NBL):** this is the line from which the breadth of the territorial sea is measured. Its course corresponds to the low-water line along the coast. (UNCLOS, Art. 5), (Figure 1).
- **Straight baseline (SBL):** this is obtained by linking points furthest from the coast and must not depart to any appreciable extent from the general direction of the coast (UNCLOS, Art. 7), (Figure 1).

**Internal waters:** 'waters on the landward side of the baseline of the territorial sea form part of the internal waters of the state' (UNCLOS, Art. 8). States exercise full territorial sovereignty over such waters, the seabed and subsoil and superjacent airspace (Figure 1).

- **Historic bay:** when a state claims the waters of a bay as internal waters on the basis of historic rights, and can demonstrate effective and continuing authority over those waters (UNCLOS, Art. 10), (Figure 1).
- **Territorial sea:** strip of sea adjacent to the territory and internal waters of the coastal state over which the state exercises full sovereignty both over the groundwater and over the superjacent airspace, seabed and subsoil of that sea. The maximum breadth of territorial sea is 12 nautical miles (UNCLOS, Arts. 2, 3 and 4), (Figure 1).
- **Contiguous zone:** waters located beyond the territorial sea and adjacent to it and in which the coastal state may take customs, fiscal, immigration or health measures. Its breadth may not exceed 24 nautical miles from the baseline from which the territorial sea is measured. (UNCLOS, Art.33), (Figure 1).

- **Exclusive economic zone:** maritime area beyond and adjacent to the territorial sea in which the coastal state exercises sovereign rights for the purposes of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, the seabed and its subsoil and the superjacent waters. Its breadth is 200 nautical miles from the straight baselines from which the territorial sea is measured. (UNCLOS, Arts. 55, 56 and 57), (Figure 1).
- **Continental shelf:** natural prolongation of a coastal state's submarine territory to the outer edge of the continental margin, or to a distance of 200 nautical miles if the continental margin does not extend this far. The continental margin comprises the submerged prolongation of the land mass of the coastal state and consists of the seabed and subsoil of the shelf, the slope and the rise (UNCLOS, Art. 76), (Figure 1).
- **High seas:** these are parts of the sea not included in the exclusive economic zone, in the territorial sea, in the internal waters or in the archipelagic waters of an archipelagic state. The high seas are free for all states and reserved for peaceful purposes (UNCLOS, Art. 88), (Figure 1).
- **Area:** this is the sea and ocean bed and its subsoil outside the limits of national jurisdiction. The Area and its resources are the common heritage of mankind; no state or natural or juridical person can acquire it. The natural resources of the Area are the minerals within it (UNCLOS, Art. 136, 137), (Figure 1).

#### 2.3.1.1.1. Other UNCLOS concepts

- **Islands and rocks:** natural area of land, surrounded by water, which is above water at high tide. The territorial sea, the contiguous zone, the exclusive economic zone and the continental shelf of an island are determined in accordance with the provisions of this Convention that are applicable to other land territory. Rocks which cannot sustain human habitation or economic life of their own shall have no exclusive economic zone or continental shelf (UNCLOS, Art. 121).
- **Archipelagic state:** a state constituted wholly by one or more archipelagos and which may include other islands (UNCLOS, Art. 46). In the Mediterranean, there is only one archipelagic state, Malta.
  - **Archipelago:** a group of islands, including parts of islands, interconnecting waters and other natural features which are so closely interrelated that such islands, waters and other natural features form an intrinsic geographical, economic and political entity, or which historically have been regarded as such (UNCLOS, Art. 46).
- **Enclosed or semi-enclosed sea:** 'means a gulf, basin or sea surrounded by two or more states and connected to another sea or the ocean by a narrow outlet or consisting entirely or primarily of the territorial seas and exclusive economic zones of two or more coastal states' (UNCLOS, Art. 122).

'The states bordering an enclosed or semi-enclosed sea should cooperate with each other in the exercise of their rights and in the performance of their duties under this Convention', (UNCLOS, Art. 123).

### 2.3.1.1.2. *Jurisdictional spaces not defined in UNCLOS*

The coastal states of the Mediterranean have not, for various reasons, generally claimed exclusive economic zones, which is why there is still an area of high seas. These reasons include a desire to preserve freedom of navigation and access to fishery resources and also to avoid delimitation disputes in a relatively small sea (González Giménez, J., 2007).

The lack of exclusive economic zones has not, however, prevented the coastal states of the Mediterranean (from the 1990s onwards) from declaring maritime zones that fall partly within the framework for exclusive economic zones as envisaged in UNCLOS. On a premise that some authors term '*a maiore ad minus*', a number of states have interpreted the legal system for an EEZ in such a way that it can be partitioned, picking and choosing the elements that are of interest to them<sup>2</sup> (González Giménez, J., 2007). In the absence of an EEZ, and with the aim of protecting resources (primarily fisheries<sup>3</sup>) and the environment, these countries have created fishery zones, ecological protection zones and archaeological contiguous zones.

**Archaeological contiguous zone:** 12 nautical miles adjacent to the territorial sea, proclaimed by some countries (Algeria, Cyprus, France, Italy and Tunisia) to protect submerged cultural heritage (European Commission, 2009).

- ***Ecological protection zone:*** there is no official definition of an ecological protection zone but it can be described as an area aimed at preserving the biodiversity and fishery resources and at protecting the environment. (Chevalier, C. 2005).
- ***Fishery zone/fishery protection zone:*** area of variable breadth (up to 200 nautical miles) declared by a coastal state around its coastline, and within which it exercises control over access to fishery resources. It has no jurisdictional effect over other resources. (Chevalier, C. 2005).

### 2.3.1.1.3. *Delimitation of maritime spaces between adjacent and opposite states*

The declaration and establishment of different maritime jurisdictions on the part of states can give rise to overlapping areas, either between opposite or adjacent states. The general principle for delimitation is that of equidistance, unless otherwise agreed. The existence of historic rights or other special circumstances may justify other solutions. The principle of fairness is used when the delimitation has to be undertaken between highly unequal territories; for example, between a small island and a long coastline, or due to the geomorphological features of a coastline and the underlying shelf. The casuistry is very broad and gives rise to a variety of cases.

<sup>2</sup> '(...) it may be the case that, in certain situations, as the states may see fit, and as occurs in the Mediterranean, a zone of more modest pretensions than an exclusive economic zone is established, but one that is capable of offering certain benefits without having to suffer the inconvenience that establishing an exclusive economic zone might, depending on the circumstances, cause' (González Giménez, J., 2007).

<sup>3</sup> 'The sovereignty of the coastal states has traditionally been limited to 12 nautical miles and, in some cases, to only 6 miles. Consequently, unlike in other semi-enclosed seas, such as the Baltic for example, most of the Mediterranean's waters are international waters. This has led to the area becoming a meeting point for ships flying flags of convenience or third country fleets fishing without any regulation. This activity (...) has led some countries to begin to establish unilateral fishery protection measures. Thus in 1997 Spain declared a fishery protection area stretching approx. 49 miles from the Spanish coast,' (Fraga Estévez, C., 2003).

In the Mediterranean and Black Seas – semi-enclosed seas of small dimensions – numerous territorial disputes arise which, to a certain extent, explain why there has been no widespread creation of exclusive economic zones, although there has been a process of reaching agreements relating to delimitation of the continental shelf (see 'continental shelf' and Section 3.4).

### **2.3.2. Jurisdictions and geographic location**

The relative positions of the states determines how their maritime jurisdictions develop. As has already been noted, opposite states are limited in terms of their possibilities of extending the different forms of jurisdiction, depending on the distance between them. In the Mediterranean basin, no state can declare the maximum 200 nautical mile breadth of exclusive economic zone or fishery zone because at no point is the Mediterranean more than 400 miles wide.

It is a similar situation for adjacent countries. The high number of states bordering the Mediterranean and Black Seas, along with the limited breadth of the seas, forms a limitation to a state's extension of its maritime jurisdiction. Of the 26 coastal states and four territories<sup>4</sup> of the Mediterranean and Black Seas, 11 are in Europe, 5 in Africa and 10 in Asia (Map 3).

There is moreover a north-south asymmetry in the Mediterranean in relation to the number of states located along its coastline. While there are 12 countries on the north coast (Spain, France, Monaco, Italy, Malta, Slovenia, Croatia, Bosnia-Herzegovina, Montenegro, Albania, Greece and Turkey), there are only five on the south (Morocco, Algeria, Tunisia, Libya and Egypt). In addition, the fact that Italy is a peninsula situated in the centre of the Mediterranean, with its coastline close to the coasts of opposite countries, increases the need for delimitation agreements in this part of the Mediterranean.

In the Black Sea, too, there is an asymmetry caused by the relative positions of the states. Turkey occupies the whole of the southern coast, while five more states make up the rest of the basin (Bulgaria, Romania, Ukraine, the Russian Republic and Georgia). Turkey also has a double coastline and thus greater possibilities for extending its jurisdictional waters.

In summary, the relative position of a state determines the number of its boundaries which, for the maritime space, include both those established between adjacent states and those created between opposite states. Interactions between adjacent and opposite states in the Mediterranean and Black Seas give rise to 36 boundary contacts (Table 6). In the Mediterranean, because of its relative position, Italy has the most maritime boundaries and, in the Black Sea, Turkey.

To this complexity must be added the issue of insularity. As an island state (Malta) or a mixed state (Greece and Croatia being among the most significant), a country is able to project its jurisdiction, although the existence of a country's islands close to the coast of another state, as in the case of Greece, limits the possibility of extending national jurisdictions and can be a source of conflict.

All these factors relating to a state's position, whether adjacent or opposite, or whether an island, determine the jurisdictional reality of these seas.

---

<sup>4</sup> The territories are: Gibraltar, Akrotiri and Dhekelia, which belong to the United Kingdom and, on the other side, the Gaza Strip.

### 2.3.3. Other relevant factors

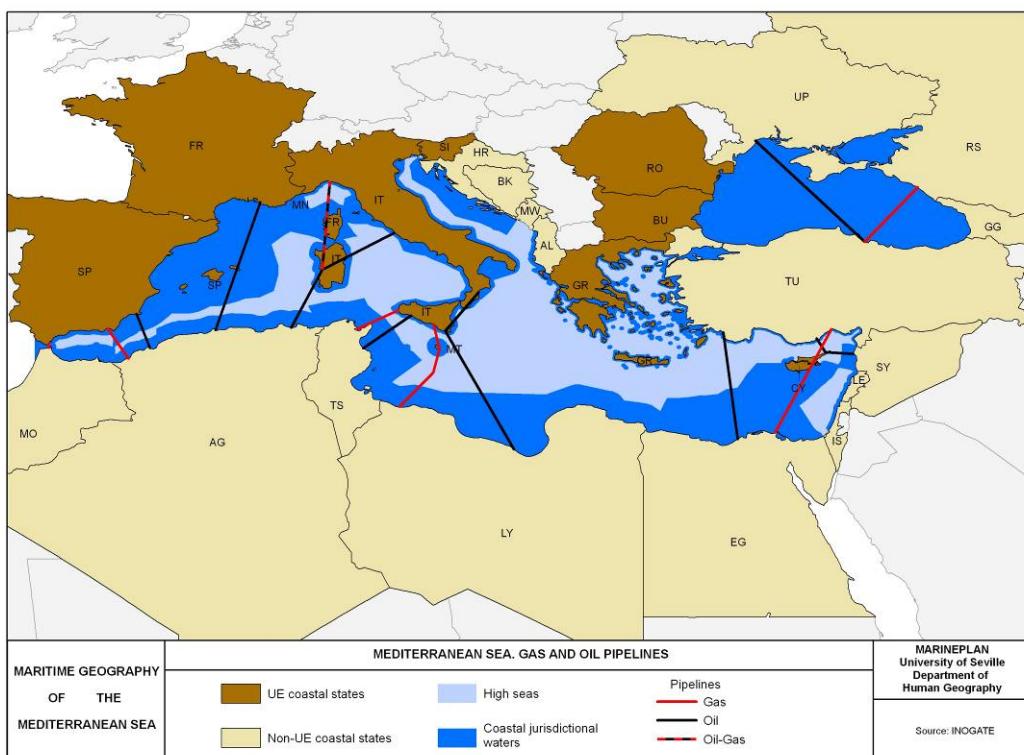

There are other factors that determine whether a state would enjoy a favourable outcome if it were to extend its national maritime jurisdiction. One clear indicator, from a physical point of view, is the coastal morphology, in which convexity encourages the extension of maritime jurisdictions and concavity discourages it. There are, however, other secondary factors that may have indirect consequences on the delimitation of maritime jurisdictions.

Some of these factors are political in nature, relating to territorial tensions, and sufficiently conflictual situations arise to require action to clarify and establish certain maritime jurisdictions. These factors include what some Anglo-Saxon authors have described as *flash points* (Anderson, 1993) or *choke points* (Alexander and Morgan, 1988), (Map 5). These categories include straits that are an international navigation route (as in the case of Gibraltar), territorial disputes (the Greek islands), issues of military strategy or energy (Black Sea oil pipelines), (Map 6).

**Map 5: Choke points. Mediterranean and Black Seas**

**Map 6: Marine gas and oil pipelines. Mediterranean and Black Seas**

## 2.4. THE EUROPEAN UNION AND ITS PRESENCE IN THE MEDITERRANEAN AND BLACK SEAS

Of the European coastal Mediterranean states, seven are EU Member States (Map 4), two are candidate countries (Croatia and Turkey) and the remaining three are potential candidate countries (Albania and Montenegro have formally requested membership, Bosnia-Herzegovina has not). The Mediterranean coast is home to more than 150 million people, a figure which doubles during the tourist season (COM(2009)466 final).

In the Black Sea region, two countries belong to the EU, Bulgaria and Romania, and there is one candidate country, Turkey. Approximately 16 million people live around the Black Sea coast, with most of the population concentrated in Ukraine and Turkey (candidate country). As of 2000, the coastal population of Bulgaria totalled 714 000 people, and that of Romania 746 000 (Duzgunes, E., Erdogan, N., 2008).

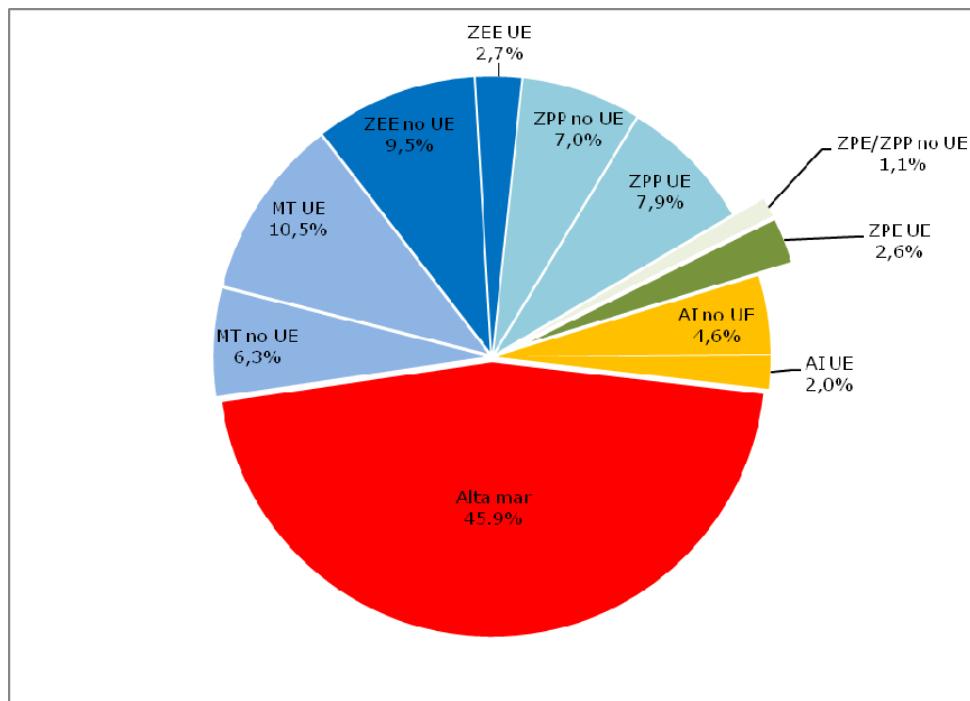

**Table 7: Characteristics of the EU countries of the Mediterranean and Black Seas (2006)**

Countries and Territories	Total surface area (sq.km.)	Maritime surface area of jurisdictional waters (sq.km.)	Population
Spain	505 370	246 067	44 121 300
France	551 500	87 212	61 256 600
Italy	301 340	120 868	58 842 800
Greece	131 960	107 891	11 147 100
Malta	320	8 231	406 000
Cyprus	9 250	81 862	771 200
Slovenia	20 270	376	2 006 800
Bulgaria	110 879	34 288	7 385 367
Romania	238 391	31 108	22 303 522

Source: UNEP/MAP, 2009 and CIA Factbook, 2007.

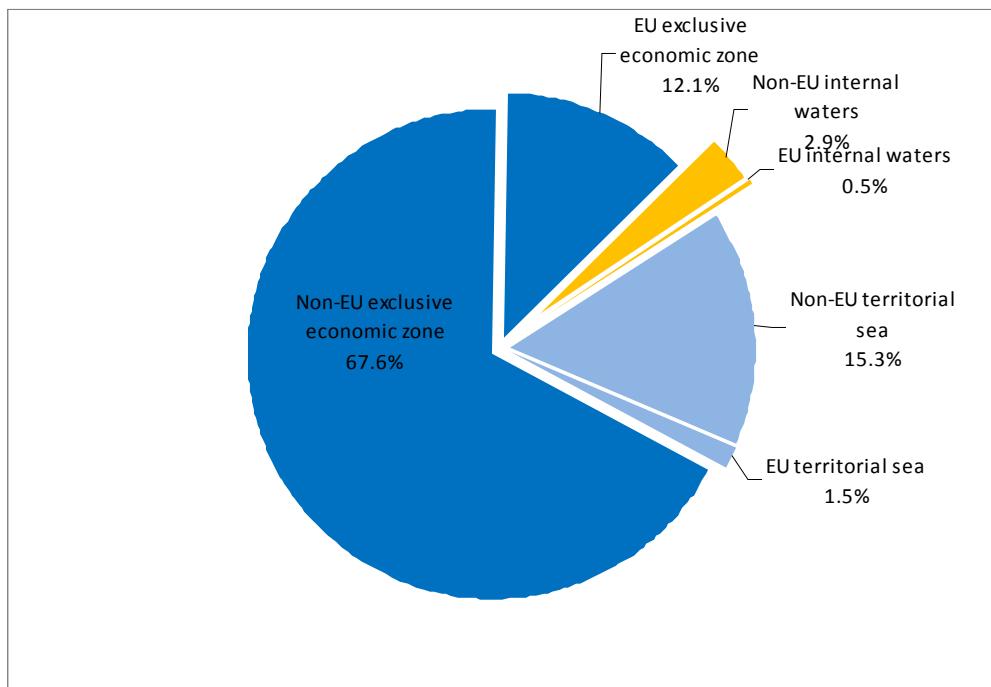

The weight of the European Union in Mediterranean and Black Sea waters can be seen in terms of the surface area of Member States' jurisdictional waters. In the Mediterranean, the area of EU Member States' jurisdictional waters totals 652 507 km<sup>2</sup> (Table 9) and represents approximately 25.2% of all national jurisdiction over these waters (Graph 1). In the Black Sea, Bulgaria and Romania together have jurisdiction over 65 396.5 km<sup>2</sup> of water (Table 9), representing 13.1% of all maritime jurisdiction in this sea (Graph 2).

**Graph 1: Maritime jurisdictions in the Mediterranean**

Source: Author.

**Graph 2: Maritime jurisdictions in the Black Sea**

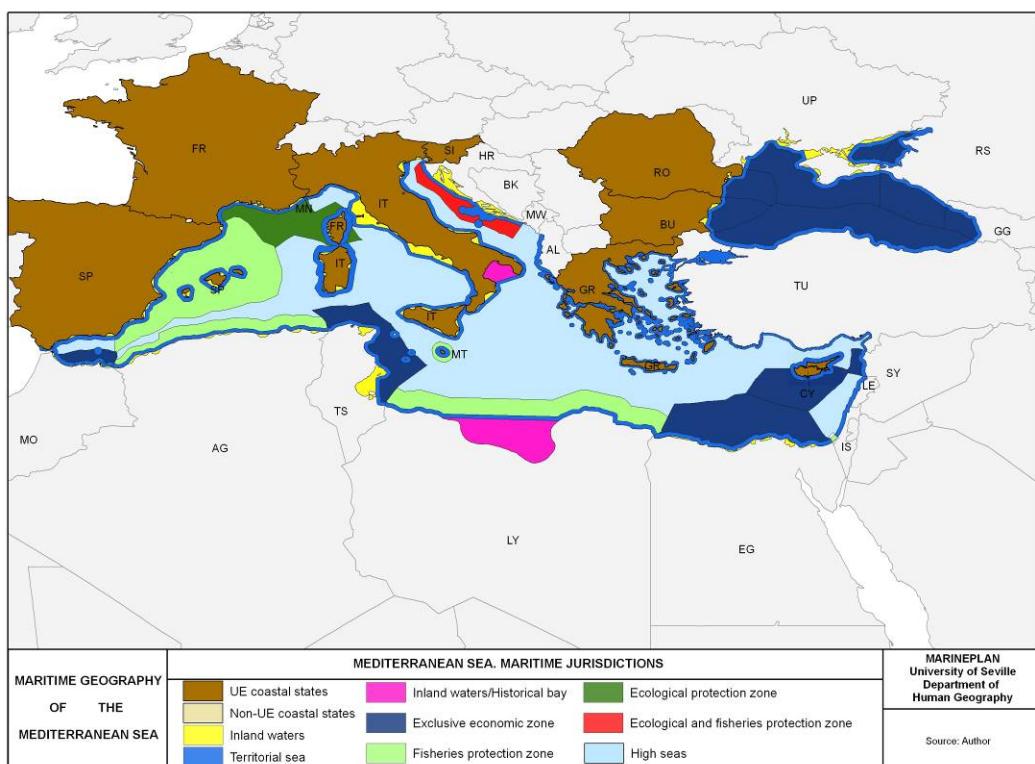

Source: Author.

### 3. JURISDICTIONAL WATERS: GENESIS AND EVOLUTION

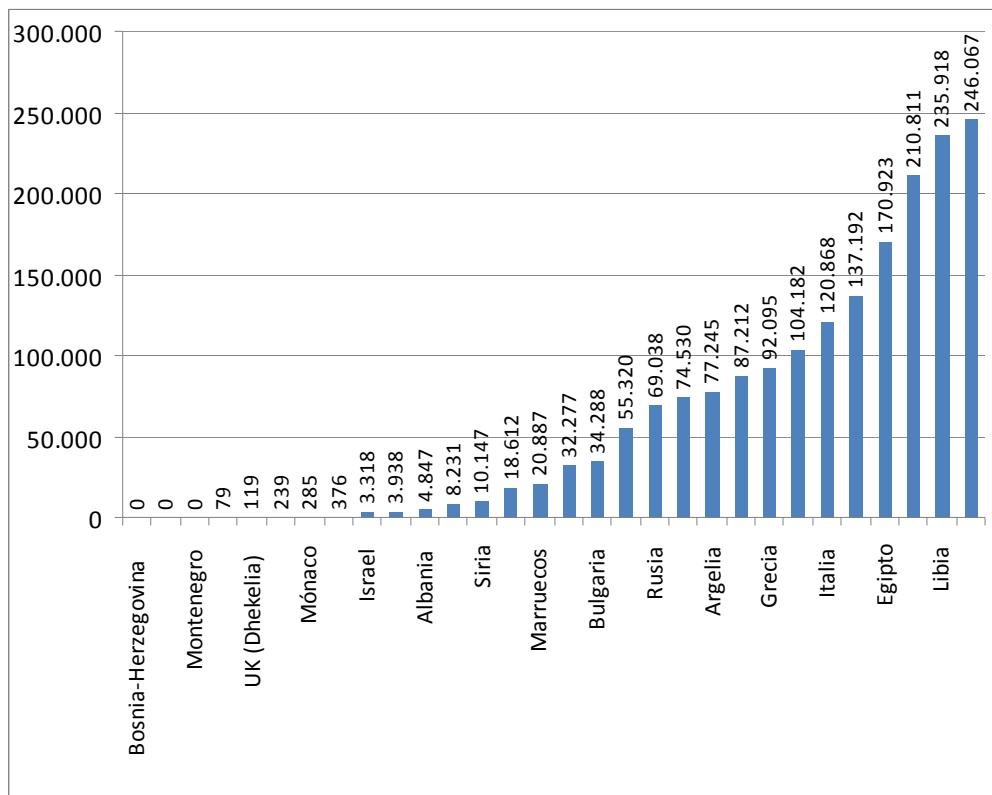

There is a wide range of jurisdictional forms in use in the Mediterranean and Black Seas (Map 7). Apart from those defined in UNCLOS, the states have adopted others that were not envisaged in this text. Alongside the basic concepts of internal waters (Map 8), territorial sea (Map 9), contiguous zone (Map 10), exclusive economic zone (Map 11) and continental shelf (Map 12), fishery protection zones (Map 13), ecological protection zones (Map 14) and a combination of these latter two (Map 14) have thus also been proclaimed.

In addition, two historic bays have been declared (Gulf of Taranto and Gulf of Sidra) (Map 15) which are, in turn, internal waters (Map 14). A majority of the states (twelve) have established straight baselines (Map 8), as opposed to nine that have not.

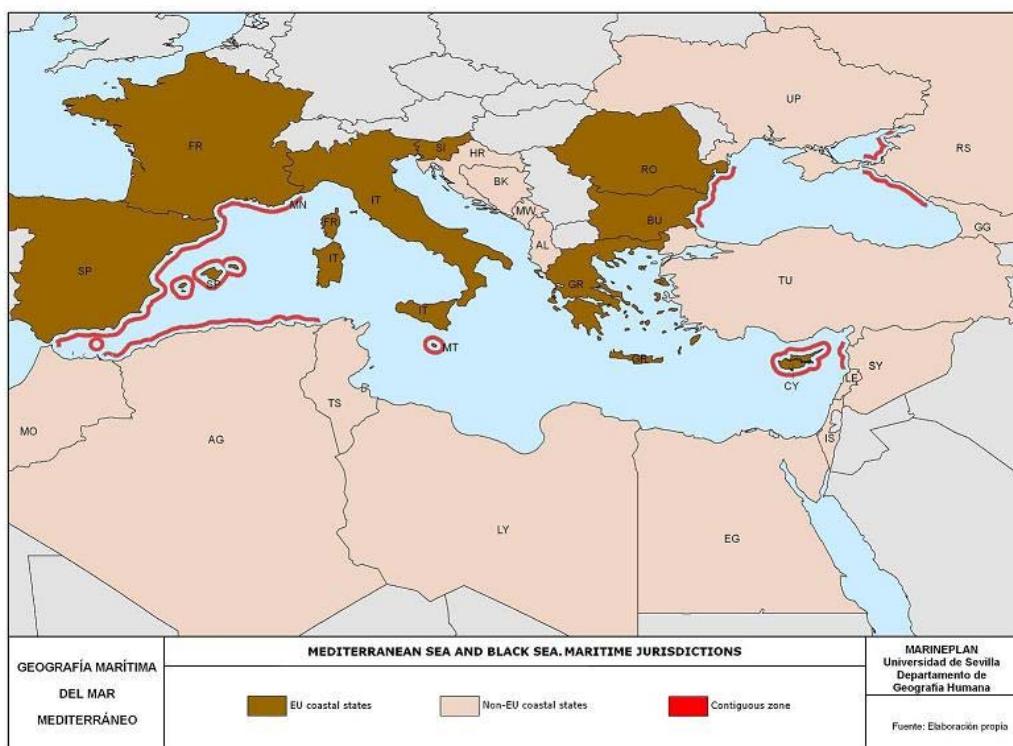

## Map 8: Baselines and internal waters. Mediterranean and Black Seas

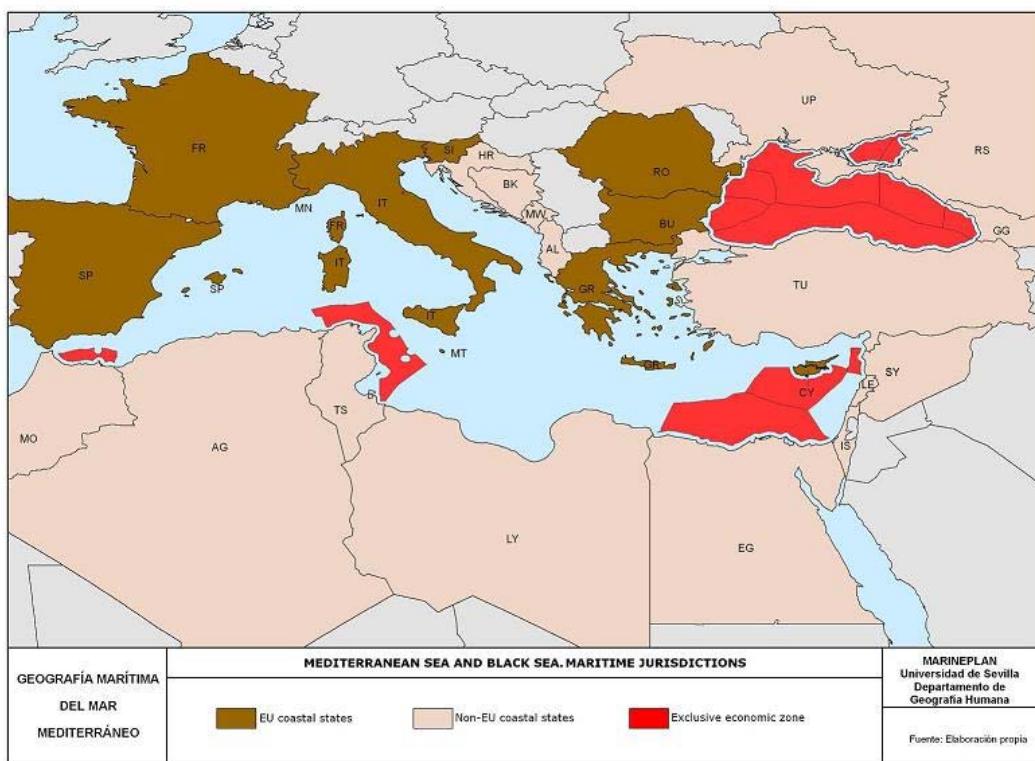

### Map 9: Territorial sea. Mediterranean and Black Seas

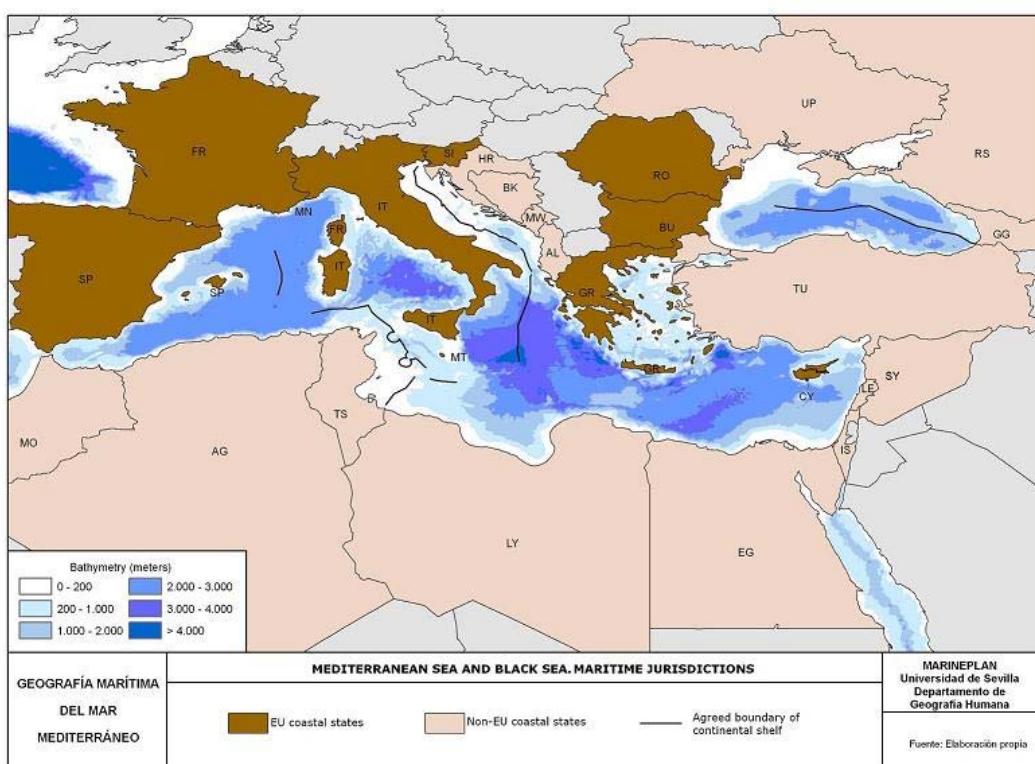

### Map 10: Contiguous zone. Mediterranean and Black Seas

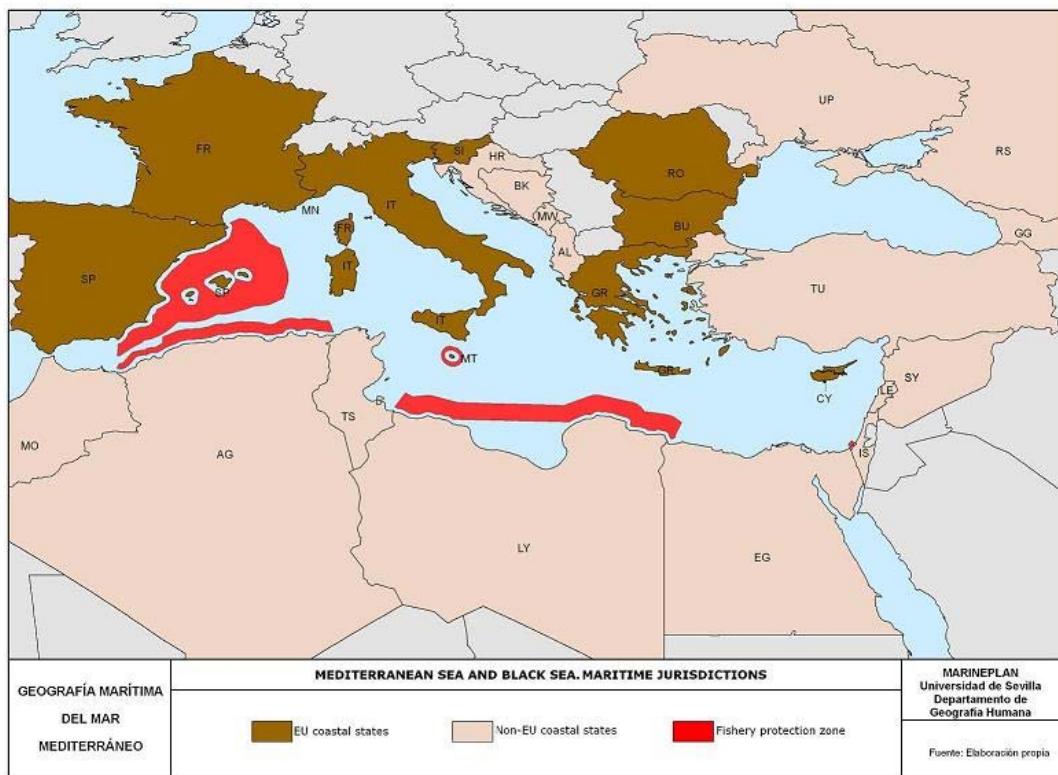

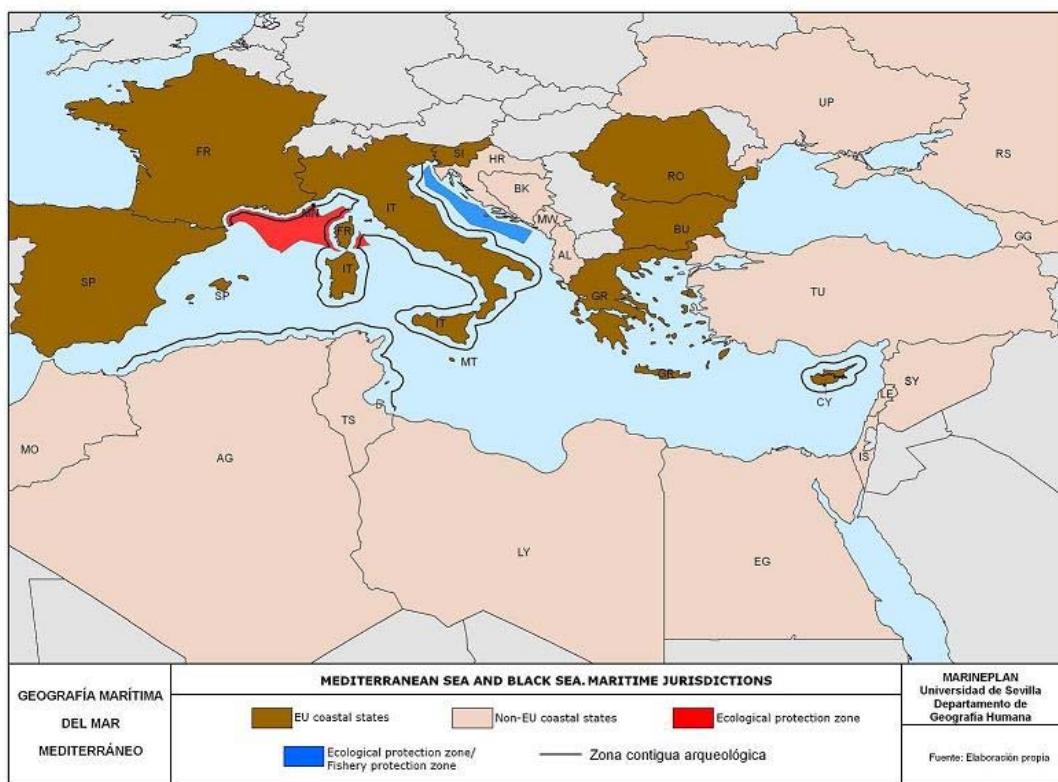

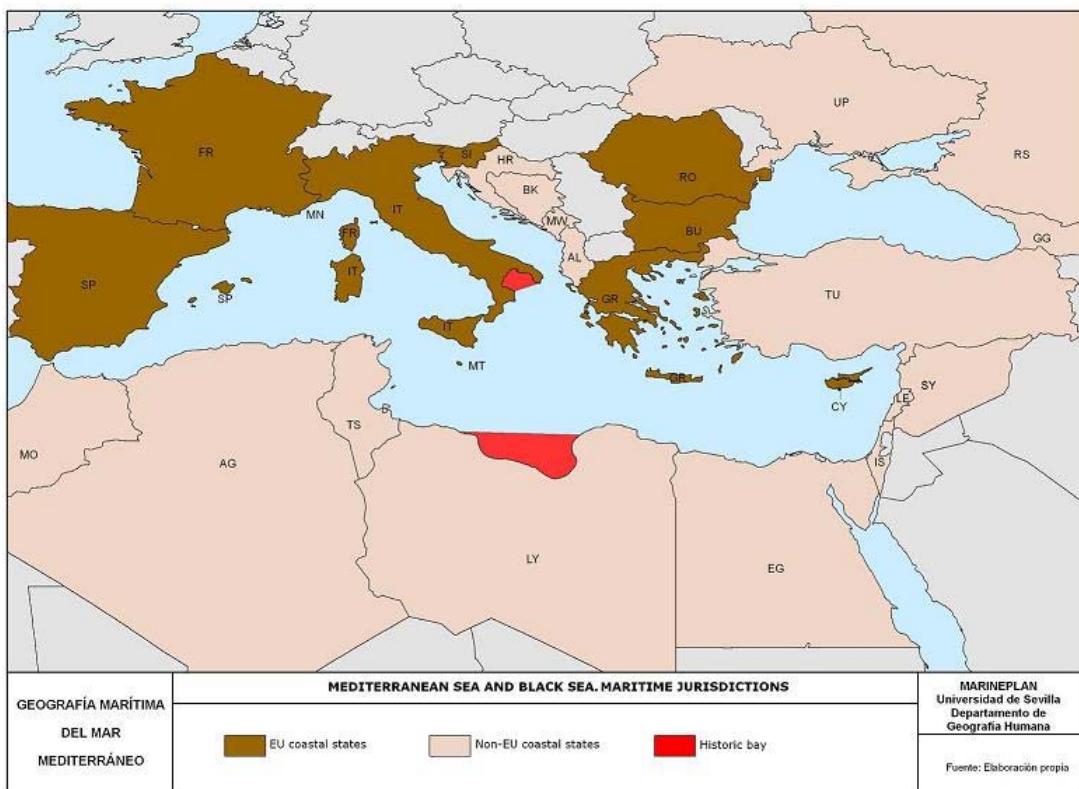

**Map 11: Exclusive economic zone. Mediterranean and Black Seas**

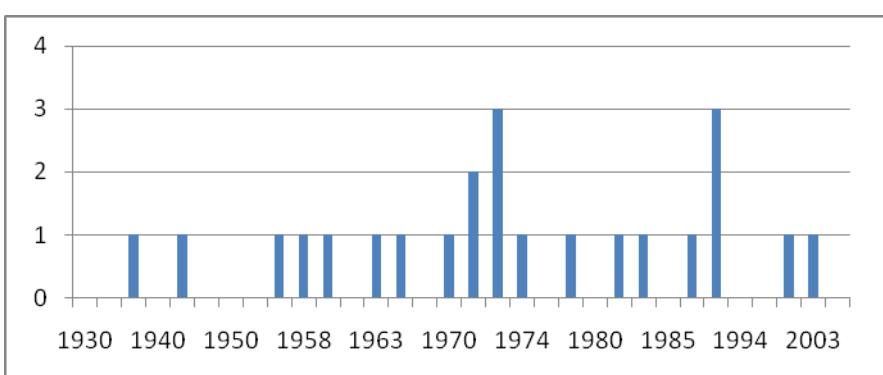

**Map 12: Continental shelf. Mediterranean and Black Seas**

**Map 13: Fishery protection zones. Mediterranean and Black Seas****Map 14: Other jurisdictions. Mediterranean**

**Map 15: Historic bays. Mediterranean and Black Seas****3.1. HISTORICAL PERSPECTIVE**

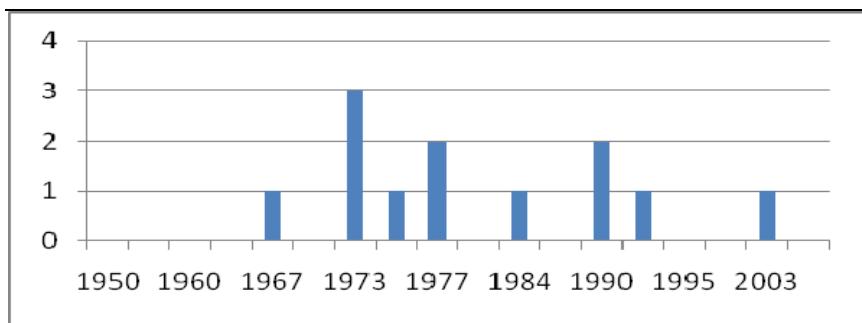

Until the 1970s, states around the Mediterranean and Black Seas were primarily interested in either extending their territorial sea to the maximum 12-mile limit<sup>5</sup> (Graph 4), or declaring fishery zones with a similar limit. Most of the bilateral delimitation agreements for the continental shelves were also reached over this period (i.e. following the 1958 Geneva Convention), and straight baselines established (Graph 5), (Suárez de Vivero, J., 2006).

**Graph 4: Number of agreements. Territorial sea**

Source: European Commission, 2009.

<sup>5</sup> 'Some countries still adopt smaller limits, concretely Greece and Turkey in the Aegean Sea. Given the complex political and geographic situation, the two countries still dispute the only possibility of extending their territorial seas to beyond 6 nautical miles.' (Chevalier, C., 2005).

### Graph 5: Number of agreements. Baselines

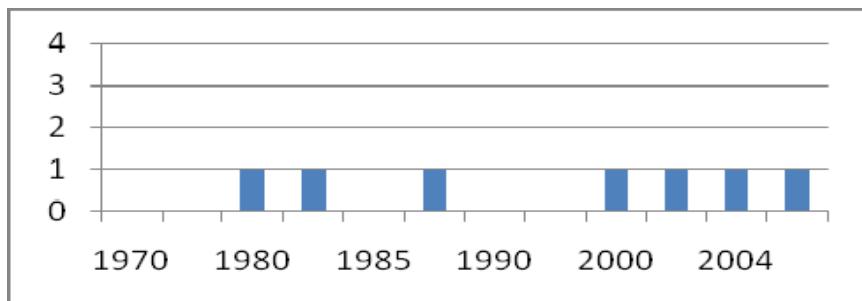

Source: Scovazzi, T, 1989; European Commission, 2009.

For reasons previously stated<sup>6</sup>, declarations of EEZs in the Mediterranean have been few and far between; up until the 1990s only two countries had decided to create them (Graph 6). This lack of EEZs has led to the existence of high seas (a jurisdiction that is defined by exclusion) and which forms what could be called the Mediterranean anomaly (Suárez de Vivero, J., 2006). In contrast, in the Black Sea, all countries have declared an EEZ, so there are no high seas in this basin.

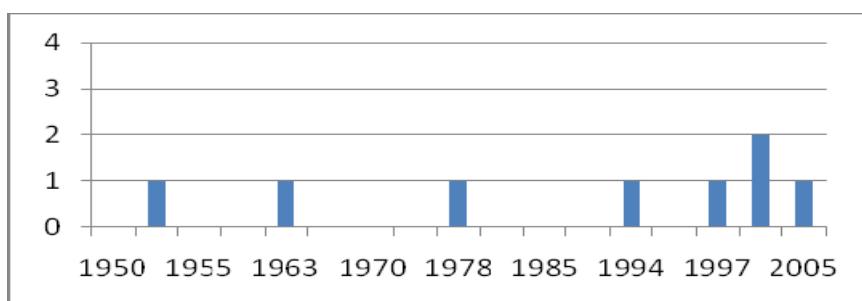

From the 1990s on, in addition to the creation of new exclusive economic zones, for ecological reasons and fishery interest, the Mediterranean states established exclusive fishery zones, fishery protection zones (Graph 7) and ecological zones, some of them overlapping and complementary (González Giménez, J., 2007).

### Graph 6: Number of agreements. EEZs

Source: European Commission, 2009.

### Graph 7: Number of agreements. Fishery protection zones

Source: European Commission, 2009.

<sup>6</sup> See Section 2.3.1.1.2.

Although a considerable proportion of the Mediterranean waters are, as already noted, high seas, the seabed and subsoil are assumed to be fully under the national jurisdiction of the different coastal states. In other words, there is no 'Area' (common heritage of humanity, according to UNCLOS) because the sea is no more than 400 nautical miles wide at any given point and so the states – even if they do not expressly claim it (Art. 77.3 UNCLOS) – exercise jurisdiction over the seabed and subsoil up to at least the 200 nautical mile limit or up to the median line, in the absence of agreed delimitations. In fact, most of the existing delimitation agreements refer to the continental shelf (Map 31).

### **3.2. ACCESSION OF THE MEDITERRANEAN AND BLACK SEA COASTAL STATES TO THE MAIN INTERNATIONAL CONVENTIONS AND AGREEMENTS ON THE LAW OF THE SEA AND FISHERIES**

Most of the Mediterranean states have signed and ratified UNCLOS<sup>7</sup>; those that have not include Morocco and Libya (which have signed but not ratified) and Israel, Syria and Turkey. In the Black Sea, with the exception of Turkey, all coastal states have signed and ratified UNCLOS<sup>8</sup> (Table 8).

Although Morocco and Syria have not ratified UNCLOS, both have the principles and norms of international law, as established in UNCLOS, enshrined in their national legislation. However, for Syria to be able to accede to UNCLOS, it would have to abandon its claim to a 35-mile territorial sea, as well as a 41-mile contiguous zone (Cacaud, P., 2005).

In addition, the following main international fisheries-related treaties cover the Mediterranean and Black Seas<sup>9</sup>:

- The United Nations Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks (SFS, adopted in 1995 and known as the New York Agreement (Table 8).

In the Mediterranean, only Cyprus, Malta and Monaco have acceded to this agreement. Egypt, France, Greece, Israel, Italy and Morocco have signed but not yet taken measures to ratify it. On the other hand, in the Black Sea, only Romania, Bulgaria and the Russian Federation have acceded to this agreement.

<sup>9</sup> For more information see:  
[http://ec.europa.eu/fisheries/cfp/external\\_relations/international\\_agreements\\_es.htm](http://ec.europa.eu/fisheries/cfp/external_relations/international_agreements_es.htm).

- [Agreement to promote compliance with international conservation and management measures by fishing vessels on the high seas](#) (adopted by the FAO in 1993), entry into force 24 April 2003.

In the Mediterranean, the following have signed this agreement: the European Union (6 August 2006), Cyprus (19 July 2000), Egypt (14 August 2001), Morocco (30 January 2001) and Syria (12 November 2002). In the Black Sea, only Georgia has signed (7 September 1994), (FAO, 2009).

Cyprus is the only Mediterranean state that is a party to both agreements, while Turkey has not signed or ratified either of them.

### **3.3. FORMS OF STATE JURISDICTIONS**

In addition to territorial sea, five states have thus far (as of 2010) declared an EEZ in the Mediterranean (Cyprus, Egypt, Morocco, Syria and Tunisia). The EEZs that have been declared are on the southern coast, with the exception of Cyprus in the far east (EU Member State) (Map 7), (Table 9). In contrast, in the Black Sea, all coastal states have declared EEZs (Table 9).

Of the remaining Mediterranean coastal states, nine have declared some form of jurisdiction (fishery zone, ecological protection zone or ecological and fisheries protection zone, territorial waters [Monaco]), (Table 9).

Eight Mediterranean states (Albania, Bosnia-Herzegovina, Greece, Israel, Italy, Lebanon, Montenegro and Turkey) have declared no jurisdictional rights apart from territorial seas (Table 9).

### 3.3.1. Spain

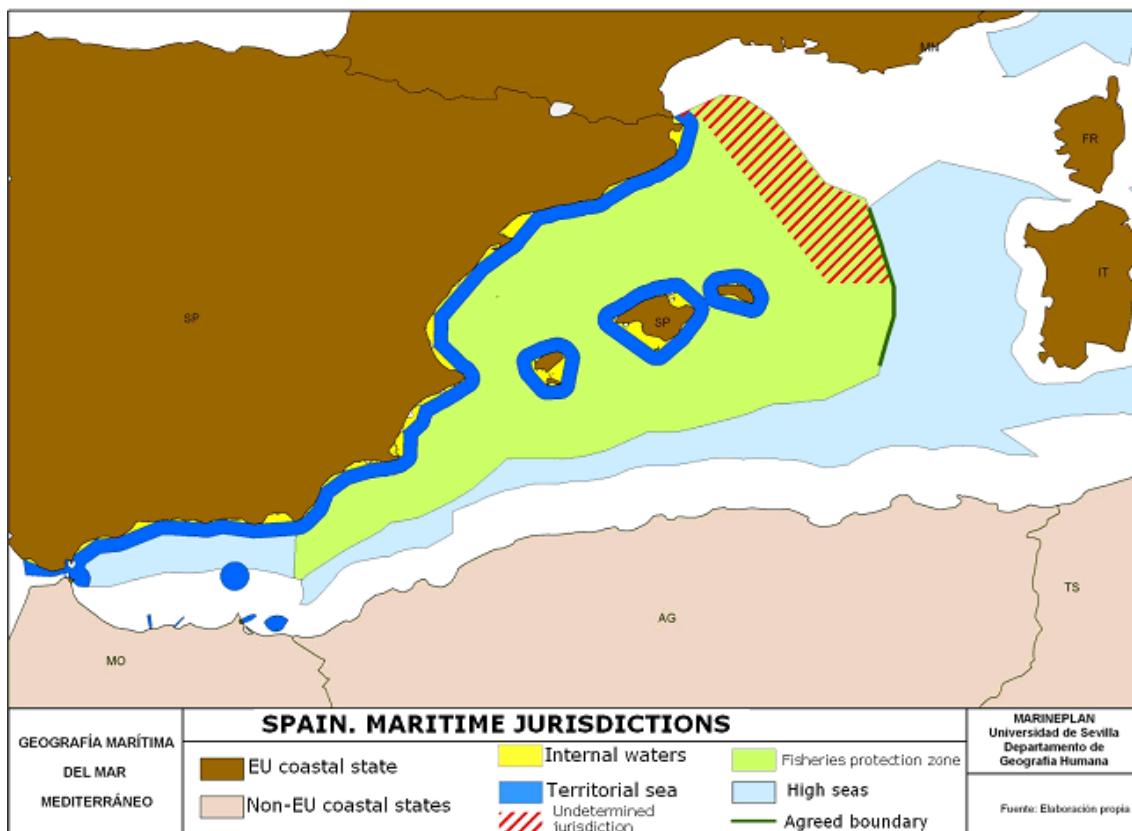

#### Jurisdictions

Spain has an agreement on the delimitation of the continental shelf with Italy. The delimitation principle used is that of equidistance.

Spain's fisheries protection zone borders and overlaps with France's ecological protection zone. France has stated its disagreement with the Spanish delimitation because it applies different principles (concavity of the French coast). The area affected by this disagreement covers some 47 476 km<sup>2</sup>.

Some of the Moroccan SBLs are either based on Spanish territory (Ceuta) or include islets or territories under Spanish jurisdiction (Peñones de Alhucemas and Vélez-La Gomera and Perejil and Chafarinas islands, Melilla) within their internal waters.

### 3.3.2. France and Monaco

#### Jurisdictions

France's ecological protection zone borders and overlaps with Spain's fisheries protection zone. France has stated its disagreement with the Spanish delimitation because it applies different principles (concavity of the French coast). The area affected by this disagreement covers some 47 476 km<sup>2</sup>.

France has signed an agreement for the delimitation of its jurisdictional waters with Italy but only in the area of the Boniface Straits between the islands of Corsica and Sardinia.

Monaco signed a convention with France for the territorial sea and for its territorial waters beyond 12 nautical miles in February 1984.

### 3.3.3. Italy

#### Jurisdictions

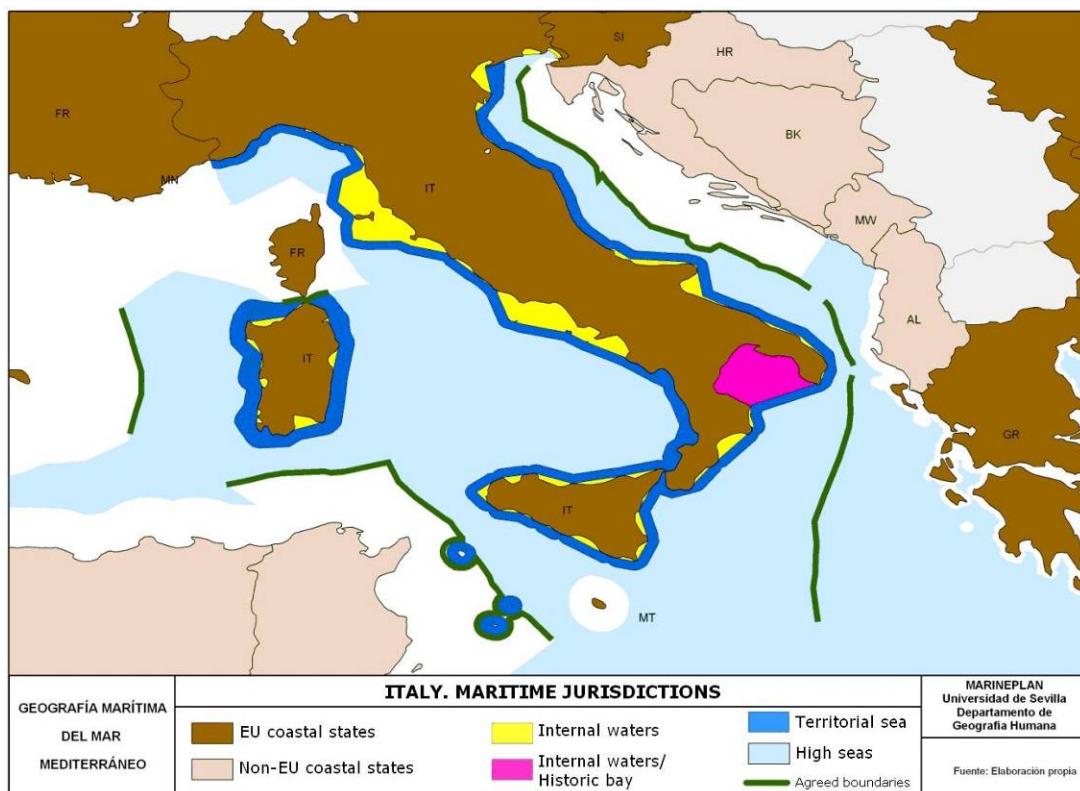

Italy is located in the centre of the Mediterranean and, because of its relative position, has the most maritime boundaries of all the Mediterranean coastal states (hypothetically 12). It is the state that has signed the most bilateral agreements (eight), all regarding delimitation of the continental shelf, except for the agreement with France regarding the territorial sea.

Italy's agreements with Slovenia, Croatia, Montenegro for the delimitation of the continental shelf were established in 1968 between Italy and the former Yugoslavia, and still remain in force.

France has signed a delimitation agreement for its jurisdictional waters with Italy but only in the area of the Boniface Straits, between the islands of Corsica and Sardinia.

**Italy has enacted a law declaring an ecological protection zone beyond 12 nautical miles but it has yet to enter into force; thus these waters remain high seas.**

### 3.3.4. Slovenia, Croatia, Bosnia-Herzegovina, Montenegro and Albania

#### Jurisdictions

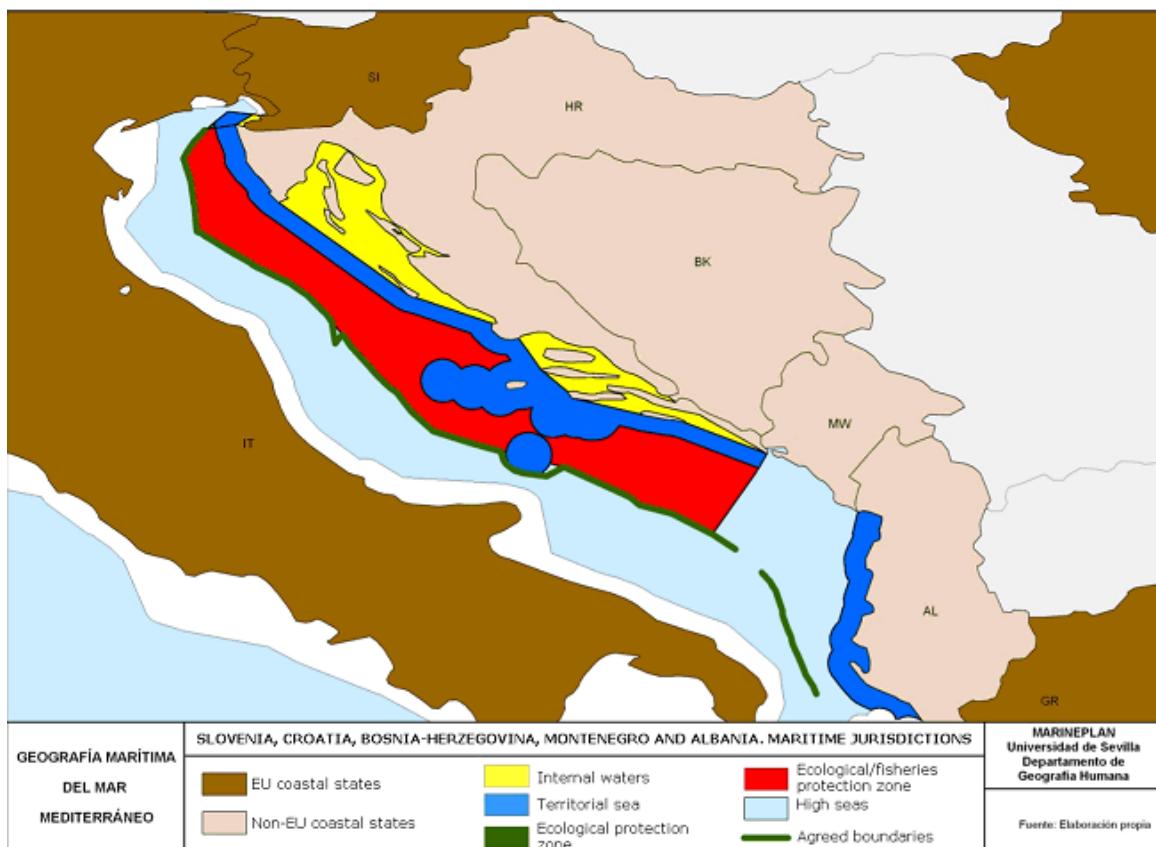

Slovenia, Croatia and Montenegro's agreements for the delimitation of the continental shelf with Italy were established in 1968 between the former Yugoslavia and Italy, and they still remain in force.

The UNCLOS website has no specific legislation referring to the proclamation of different maritime jurisdictions on the part of Montenegro or Bosnia-Herzegovina.

The delimitation agreement between Croatia and Bosnia-Herzegovina refers to the whole set of boundaries created between these two countries (land, sea and air). When setting the course of these boundaries, the agreement refers to the boundary limits at the time of the break-up of the Socialist Federal Republic of Yugoslavia in 1991 and the mutual recognition of boundaries between the two new political entities in 1992.

Albania and Italy signed a delimitation agreement for the continental shelf in 1982.

### 3.3.5. Greece

#### Jurisdictions

Greece's territorial sea extends six nautical miles in the Aegean Sea. This situation is because the proximity of the Greek islands to the Turkish coast creates great problems in establishing the delimitation of their respective territorial seas. For this reason, both countries have proclaimed a breadth of six nautical miles.

### 3.3.7. Ukraine, Russian Federation and Georgia

#### Jurisdictions

The boundary delimitation between Ukraine and Romania was referred to the International Court of Justice for arbitration in 2009.

The delimitation agreements established between Ukraine, the Russian Federation, Georgia and Turkey are based on agreements signed in 1973 and 1978 between the Soviet Union and Turkey for the delimitation of jurisdictional waters and the continental shelf in the Black Sea.

### 3.3.8. Turkey

#### Jurisdictions

Turkey's territorial sea extends to six nautical miles in the Aegean and 12 in the Black Sea. This is because the proximity of Greek islands to the Turkish coast creates great problems when establishing the delimitation of their respective territorial seas, for which reason both countries have declared a breadth of six nautical miles.

The delimitation agreements established by Turkey with Ukraine, the Russian Federation and Georgia are based on agreements signed in 1973 and 1978 with the Soviet Union for the delimitation of jurisdictional waters and the continental shelf in the Black Sea.

### 3.3.13 Tunisia and Malta

#### Jurisdictions

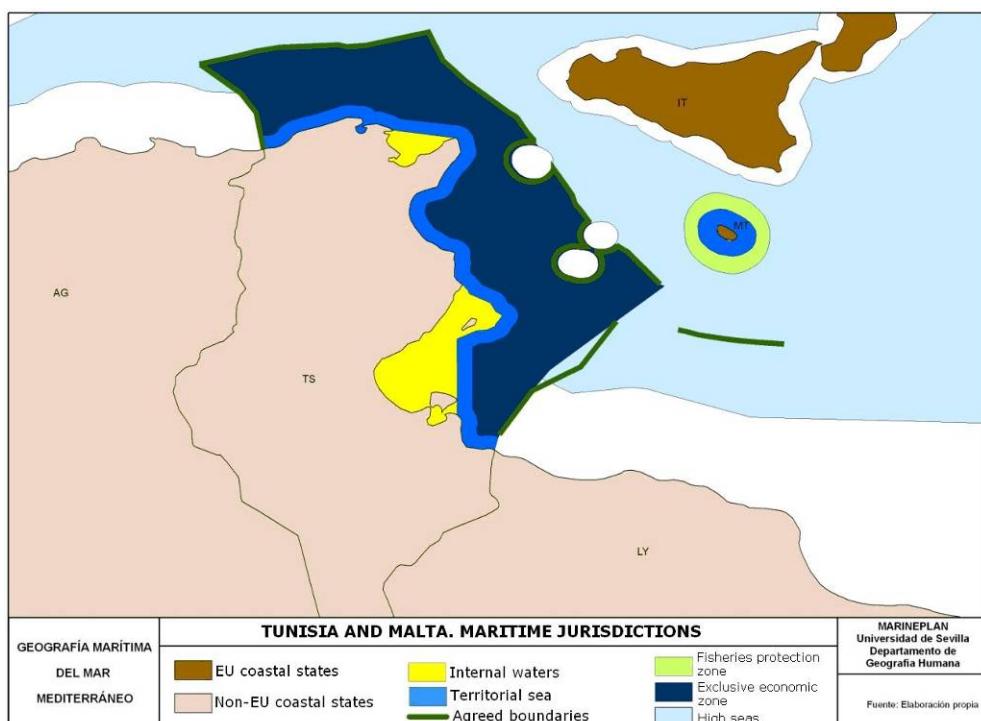

There is only one point of contact between the median lines of Malta and Tunisia. This point is, in turn, a quadruple point at which the boundaries (median lines) of Malta, Tunisia, Italy and Libya all converge.

The two agreements existing between Libya and Malta and Libya and Tunisia for the delimitation of the continental shelf are based on International Court of Justice arbitration.

Tunisia signed a provisional arrangement in 2002 for the delimitation of its maritime boundaries with Algeria, and this remains in force.

Malta's fisheries protection zone stretches 25 nautical miles from the straight baselines, according to the Law on Territorial Waters of December 1971.

### 3.3.14. Algeria

#### Jurisdictions

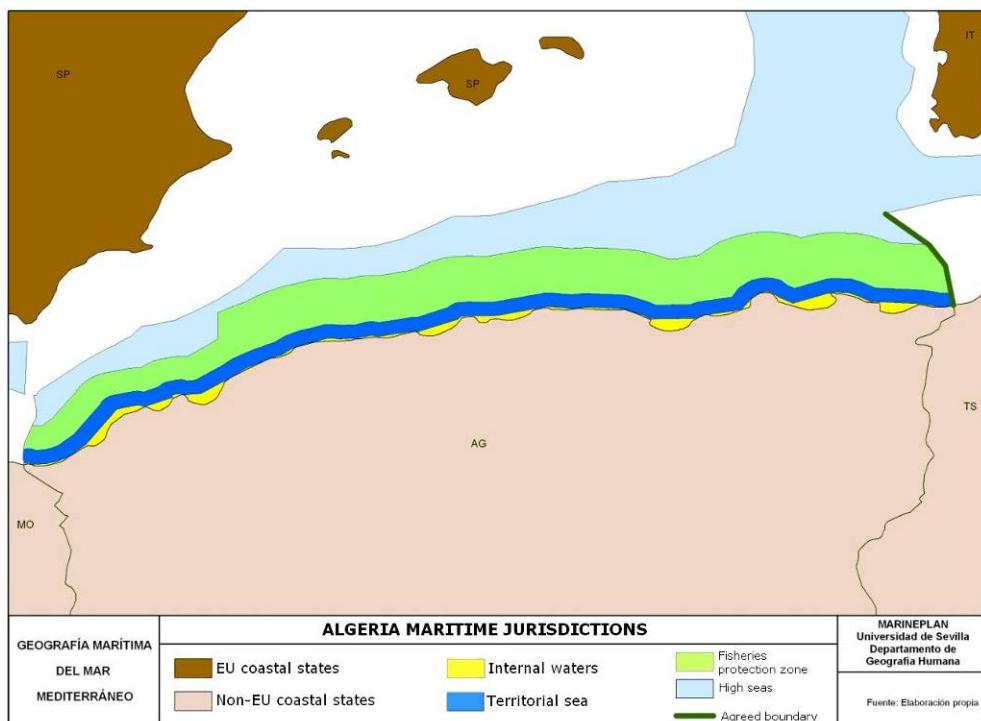

Algeria signed a provisional arrangement in 2002 for the delimitation of its maritime boundaries with Tunisia, and this remains in force.

Bilateral agreements are pending with the other countries with which it shares maritime boundaries (Spain, Morocco and Italy).

### 3.3.15. Morocco

#### Jurisdictions

Some of the Moroccan SBLs are either based on Spanish territory (Ceuta) or include the islets or territories under Spanish jurisdiction (Peñones de Alhucemas and Vélez-La Gomera and Perejil and Chafarinas islands, Melilla) within their internal waters.

There is also no delimitation agreement with Algeria, either for jurisdictional waters or the continental shelf.

### 3.4. MARITIME BOUNDARIES

The coastal states of the Mediterranean basin generate 29 boundary contacts between them which, in turn, give rise to different kinds of delimitations between the maritime jurisdictions (basically territorial sea and contiguous zone, exclusive economic zone and continental shelf), (Figure 2).

To date, 13 delimitation agreements have resulted (Map 31) from these interactions between adjacent and opposite states (including borders that emerged following the break-up of the former Yugoslavia), nine of which are between opposite states and four between adjacent ones. The most longstanding agreement dates back to 1968 (Italy-Yugoslavia) and the most recent was signed in 2003 (Cyprus-Egypt), thus forming the first EEZ delimitation agreement. Over the 40-year period between the two, 60% of the 13 boundary agreements were signed in the 1970s and 80s, nine in relation to the continental shelf.

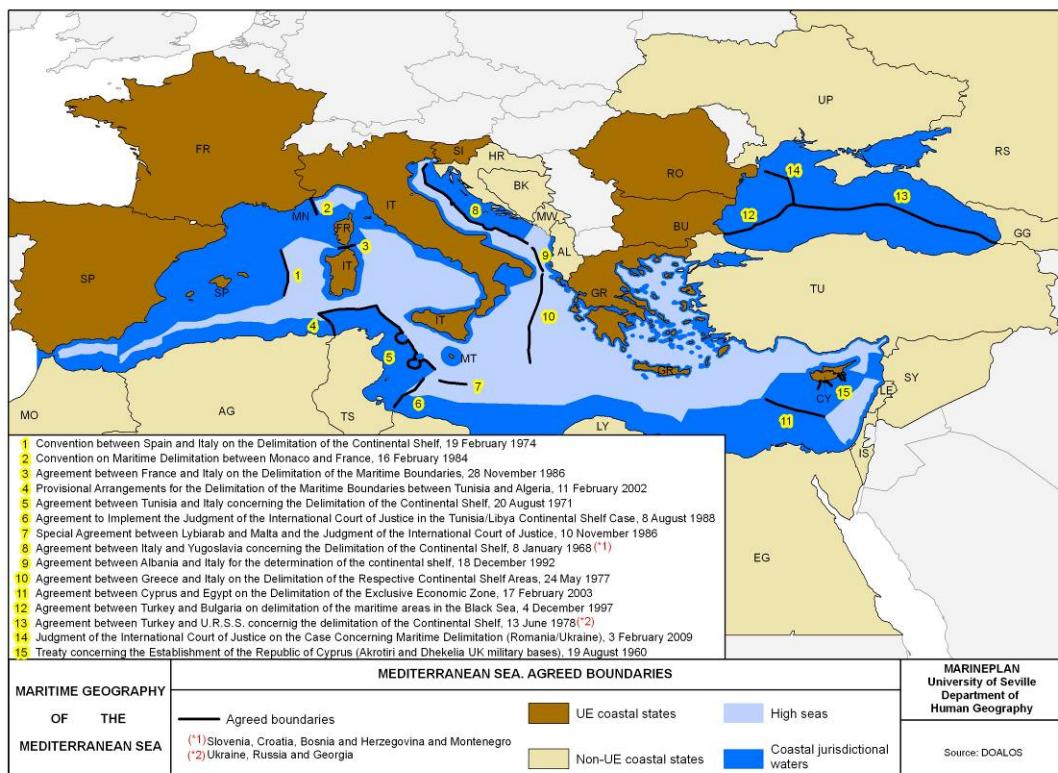

**Figure 2: Theoretical and agreed boundaries in the Mediterranean**

Bilateral agreements relating to the continental shelf have been signed between the following states: Italy and Yugoslavia (Rome, 8 January 1968); Italy and Tunisia (Tunisia, 20 August 1971); Italy and Spain (Madrid, 19 February 1974); Greece and Italy (Athens, 24 May 1977); France and Monaco (Paris, 16 February 1984); Libya and Malta (Valletta, 10 November 1986); and Libya and Tunisia (Benghazi, 8 August 1988). These two last agreements were in application of rulings of the International Court of Justice dated 3 June

1985 and 24 February 1982 respectively. Another agreement was signed on 18 December 1982 between Albania and Italy, but this has still not entered into force. In the Black Sea, Turkey and Bulgaria reached an agreement on the delimitation of the continental shelf between the two states on 4 December 1997 (Chevalier, C., 2005).

**Map 31: Agreed boundaries in the Mediterranean and Black Seas**

Geographically, 12 agreements are situated in the Mediterranean and three in the Black Sea (Map 31). Of those in the Mediterranean, five are in the western Mediterranean and seven in the east, corresponding to nine states from the northern coast (Europe) and four from the southern (African) coast.

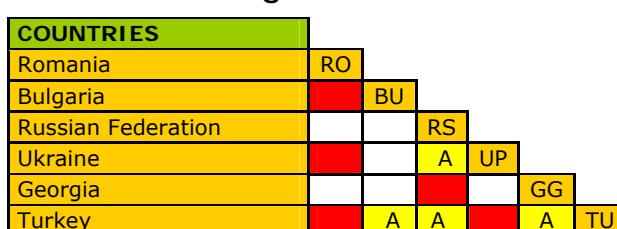

Of the agreements existing in the Mediterranean, 10 involve EU Member States (France, Italy, Spain, Greece, Malta, Slovenia and Cyprus), Italy being the state that has signed the most agreements (eight). This can be explained by its relative position, occupying a peninsula in the centre of the basin, and by the number of new states that were formed following the break-up of the former Yugoslavia, a state which signed the first maritime boundary agreement with Italy. There are six states (Bosnia-Herzegovina, Israel, Lebanon, Morocco, Syria and Turkey) that have no boundary agreements (Table 81).

Source: European Commission (2009).

In the Black Sea, the coastal states generate nine boundary contacts between them (Map 31), and these give rise in turn to different kinds of delimitation between the maritime jurisdictions (territorial sea and contiguous zone, exclusive economic zone and continental shelf). Turkey has signed the most agreements: with the USSR (1978, 1986 and 1987), with Georgia (1997) and with Bulgaria (1997). There is also an agreement between Russia and Ukraine (2003), (Figure 3).

**Figure 3: Theoretical and agreed boundaries in the Black Sea**

### 3.5. CONSEQUENCE OF DELIMITATIONS BETWEEN DIFFERENT JURISDICTIONS

The delimitation of different jurisdictions in the Mediterranean gives rise to what could be called a 'jurisdictional asymmetry', a consequence of the heterogeneity of the legal systems of adjacent jurisdictions: exclusive economic zone, fisheries zones, fisheries protection zones and ecological protection zones (González Giménez, J, 2007). An EEZ may thus border with another EEZ, with a FZ or a FPZ, and similarly a FZ can overlap with an EPZ. This can be seen in Table 82, which shows the maritime boundaries between the EU Member States present in the Mediterranean.

Jurisdictions similar to an EEZ involve exercising sovereign rights over specific issues that may not be the same amongst neighbouring states. Thus:

- Cyprus, Egypt, Morocco, Syria and Tunisia have all declared EEZs<sup>10</sup> in which they have sovereign rights over the marine resources, living and non-living, along with other kinds of jurisdictions (for marine environment protection and research).
- Algeria, Malta and Spain have created fisheries zones (also known as fisheries protected zones) in which they have exclusive and jurisdictional rights over fisheries.
- France and Slovenia have created ecological protection zones in which they have jurisdiction over protection of the marine environment. Italy adopted an ecological protection zone using a different legislative framework. Croatia has created a mixed zone, known as an ecological and fisheries protected zone.
- Algeria, Cyprus, France, Italy and Tunisia have created 12-mile archaeological contiguous zones adjacent to their territorial seas for the protection of submerged cultural heritage.

---

<sup>10</sup> It seems that France now also intends to declare an EEZ (Livre Bleu, 2009).

**Table 82: EU countries' maritime boundaries**

### 3.6. TERRITORIAL IMPACT OF THE EXTENSION OF STATE SOVEREIGNTY OVER MARITIME AREAS

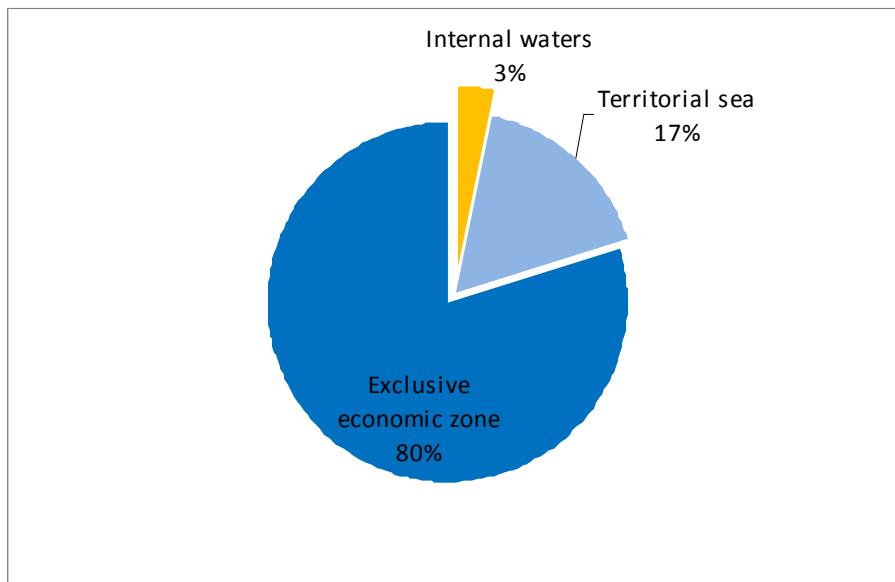

The establishment of maritime jurisdictions in the Mediterranean is an open and continuously changing process given that not all states have declared maritime spaces as recognised by UNCLOS and, also, because of the gradual creation of new jurisdictional concepts not envisaged in this treaty. Consequently, the current geography of maritime jurisdictions is not a static picture and, as the states take further decisions in this regard, the jurisdictional panorama will change (for example, the forthcoming declaration of an EEZ by France).

In addition, this jurisdictional heterogeneity creates a complex territorial reality: while a considerable part of the waters lie outside of state jurisdiction (high seas) (Map 32), all the seabed and its subsoil falls under the sovereignty of the different coastal states (Graph 8). Within a relatively small basin, freely accessible areas are therefore superimposed on others that fall under national sovereignty or jurisdiction.

**Graph 8: Maritime jurisdictions in the Mediterranean**

Source: Author.

**Graph 9: Maritime jurisdictions in the Black Sea**

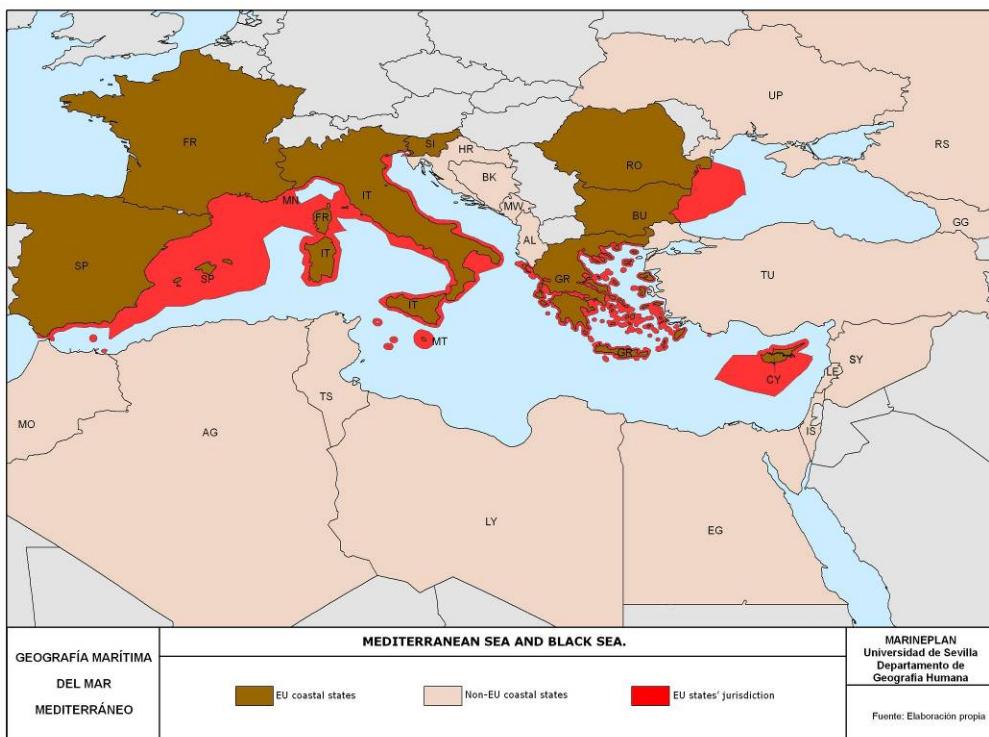

Source: Author.

### **3.7. JURISDICTIONS OF EU MEMBER STATES IN THE MEDITERRANEAN AND BLACK SEAS**

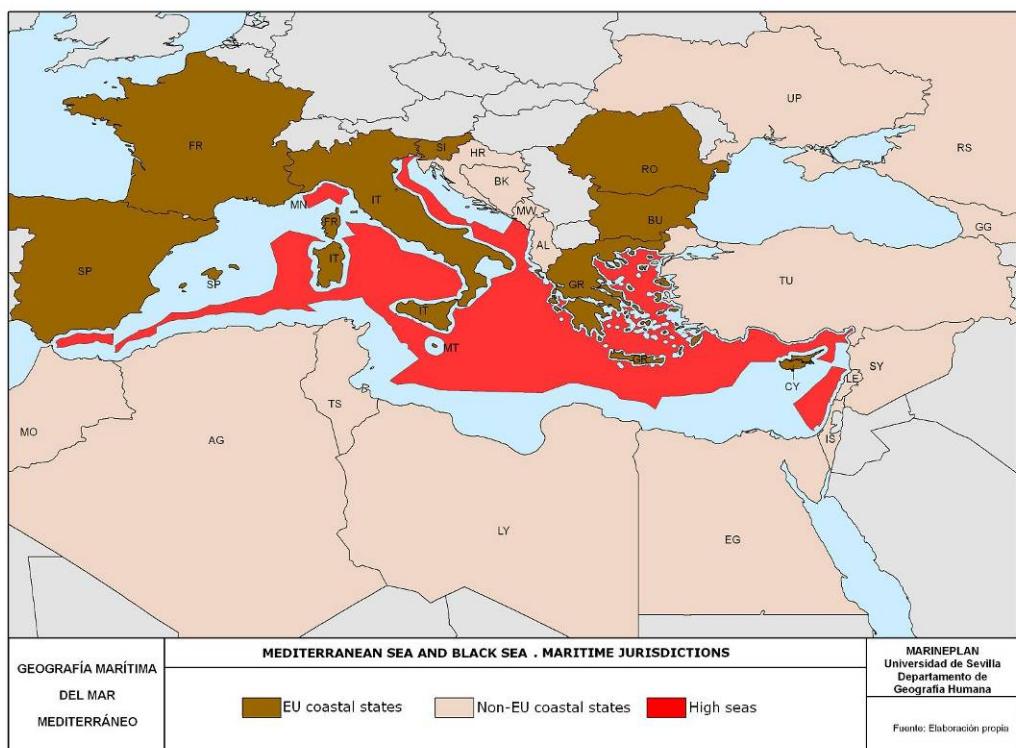

To date (early 2010), no Mediterranean EU Member State has declared an EEZ, with the exception of Cyprus (Maps 7 and 24). Of the EU Member States, Spain, France, Monaco and Slovenia have, however, declared some form of jurisdiction outside of their territorial seas (territorial waters, fisheries zone, ecological protection zone or ecological and fisheries protection zone) (Map 7). Albania, Greece and Italy have not proclaimed any jurisdictional rights beyond their territorial seas. In contrast, in the Black Sea, the two EU Member States, Romania and Bulgaria, have both declared EEZs.

The current area of high seas in the Mediterranean ( $1\ 167\ 229\ km^2$ ) is primarily due to restraint on the part of three states: Italy, Greece and Turkey. Should the Law on Ecological Protection (Law No 61, 2006) come into force, Italy alone would reduce the current area of high seas by 35% ( $415\ 000\ km^2$ ).

**Map 32: Jurisdictions of the EU in the Mediterranean and Black Seas**

**Map 33: High seas. Mediterranean.**

### 3.8. EFFECTS ON FISHERIES

While jurisdiction over the continental shelf has a limited effect on fisheries – it only affects sedentary species that are in contact with the seabed – a jurisdictional declaration beyond the territorial sea significantly affects a broad spectrum of fishing methods (Fraga Estévez, C., 2003).

The declaration of fisheries protection zones has legal implications for jurisdiction over fisheries resources. The creation of such fisheries zones, albeit under different names, reduces the high seas fisheries and can also result in the need to sign agreements regarding access to these waters on the part of fleets that previously had no jurisdictional limitations. (Chevalier, C., 2005).

Seen from another perspective, when coastal states declare their jurisdictional rights by means of any of the above concepts, this implies a greater responsibility on their part for resource and environmental conservation. Hence the suggestion to extend all states' jurisdictional rights beyond their territorial sea, as a management and conservation mechanism that would ensure effective governance of the Mediterranean basin.

Meanwhile, in the high seas, each state must apply international law to its nationals which, with regard to fisheries, means that the state is required to supervise and check that the vessels under its flag are complying with the regulations established in the different treaties (Chevalier, C., 2005).

## 4. TERRITORIAL DISPUTES AND FISHERIES ACTIVITY

There are a number of different disputes between coastal states of the Mediterranean and Black Seas. Some of them are longstanding; in others, the gradual extension of sovereignty over the maritime space has given rise to new disputes, as a consequence of an overlapping of jurisdictions and the creation of new boundaries. This section will focus on some of the more important of these.

### 4.1. WESTERN MEDITERRANEAN

**TABLE 1. STRAITS OF GIBRALTAR DISPUTE: SPAIN-MOROCCO-GIBRALTAR (UNITED KINGDOM)**

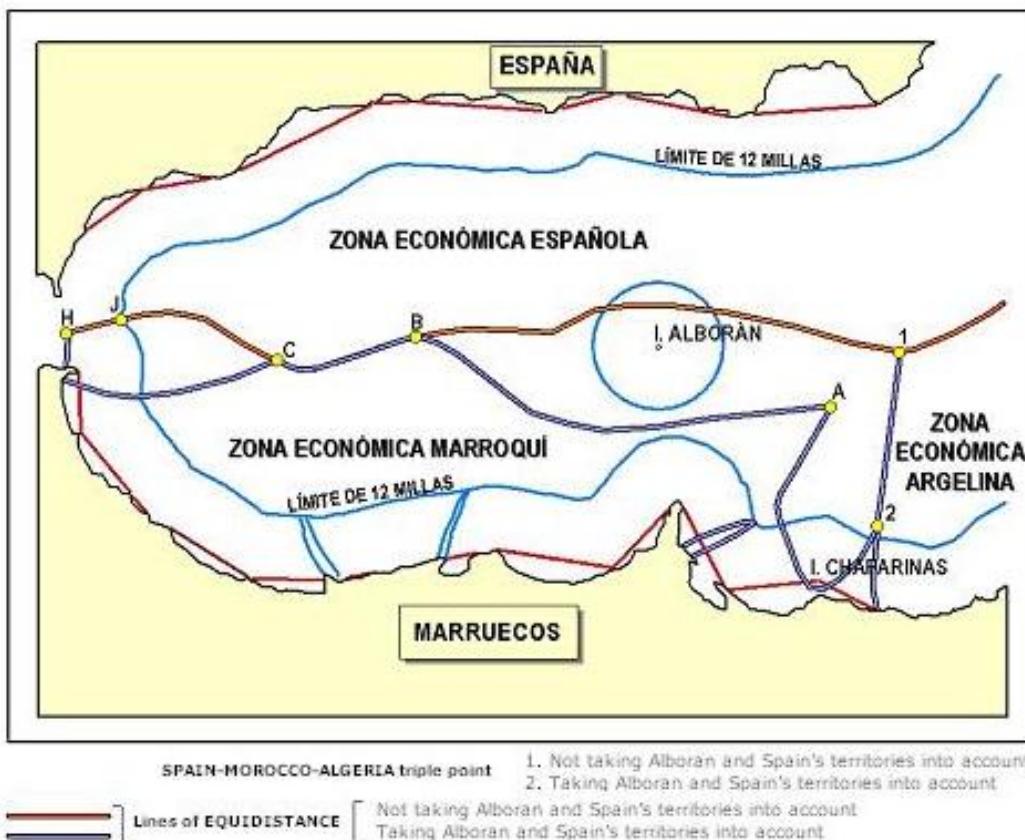

Boundaries	<p>Territorial sea between Spain and Morocco (Maps 16, 30 and 34)</p> <p>Territorial sea between Spain and Gibraltar (Map 16).</p>
Background	<p>According to Morocco, the boundary is determined by the equidistant line between its coast and the Iberian Peninsula, as if each side of the straits belonged to a single state.</p> <p>According to Spain, the waters of the straits are separated by a number of equidistant lines between the Spanish and Moroccan coasts, giving rise to strips subject to Spanish sovereignty. Thus, in the Straits of Gibraltar, two corridors are formed opposite Perejil Island and the town of Ceuta which link to the territorial sea<sup>11</sup> that projects out from the Spanish coasts in application of the median line criteria.</p> <p>Interpretation of Article X of the Treaty of Utrecht<sup>12</sup>:</p> <ul style="list-style-type: none"> <li>- The United Kingdom interprets it broadly and has been gradually occupying spaces which, according to Spain, were not ceded, such as the waters of Algeciras Bay and the waters around the Calpense isthmus. They have thus extended the waters to 3 nautical miles from the Rock, limited to two miles in Algeciras Bay, adjacent to Gibraltar.</li> <li>- Spain only recognises rights over the Rock and the waters of Gibraltar port.</li> </ul>
Resolution	No delimitation agreement has been formalised.
Importance for fisheries	<p>Need to establish bilateral fishing agreements between the EU and Morocco.</p> <p>Fishing disputes: problems of access to some fishing grounds on the part of Spanish fleets. Seizure of Spanish fishing vessels by Morocco and of Moroccan vessels by Spain in the Alboran Sea.</p>

Source: Gutiérrez Castillo, V.L., 2009, adapted by the author.

<sup>11</sup> According to UNCLOS, Spain's territories in Africa (which are an integral part of Spain) could give rise to a TS, CZ, EEZ or CS.

<sup>12</sup> Article X of the Treaty of Utrecht by which Spain ceded 'the full and entire ownership of the town and castle of Gibraltar, along with its port, defences and fortress, to the British Crown'. (Gutierrez Castillo, V.L., 2009).

**Map 34: Maritime jurisdictions in the Straits of Gibraltar**

**TABLE 2. ALBORAN SEA DISPUTE: SPAIN-MOROCCO**

Boundaries	Territorial sea, Spain and Morocco (Maps 16, 30 and 34).
Background	<p>According to Morocco, the boundary is determined by an equidistant line between its coast and the Iberian Peninsula, as if each side of the straits belonged to a single state (thus ignoring Spain's so-called '<i>plazas de soberanía</i>' ('places of sovereignty' or territories) in North Africa).</p> <p>According to Spain – and in line with UNCLOS – the Spanish territories in Africa (an integral part of the Spanish state) have their own jurisdictional waters. These territories are: Perejil island, Ceuta, Melilla, Vélez de la Gomera rock, San Antonio islet, Alhucemas rock and the islets of Mar and Tierra, the Chafarinas Archipelago, Alboran island and Las Nubes islet.</p>
Resolution	No delimitation agreement has been formalised.
Importance for fisheries	<p>Resource protection: Spain has created a marine reserve in the waters adjacent to Alboran island (in which fishing and diving are banned) and a fishery reserve (where fishing is restricted, along with the exploitation of all other existing resources)<sup>13</sup>.</p> <p>Obstacles to the formalisation of fishing agreements.</p> <p>Fishing disputes: seizure of fishing vessels.</p>

Source: Gutiérrez Castillo, V.L., 2009, adapted by the author.

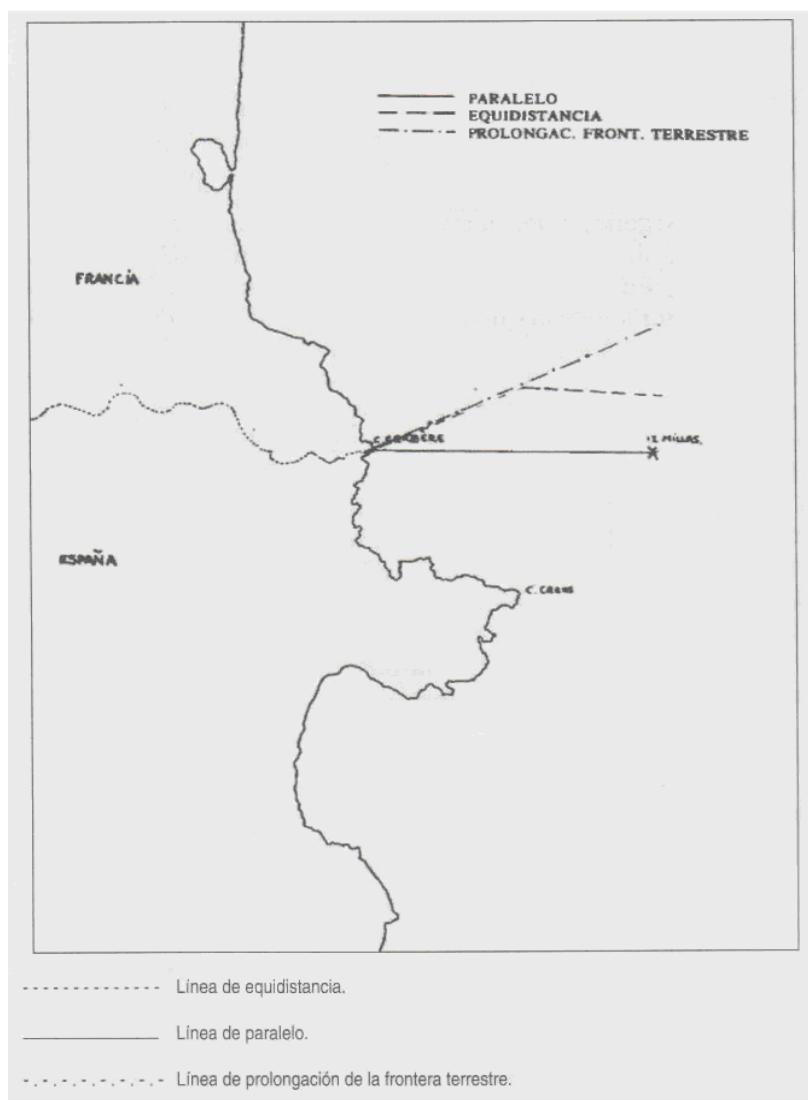

<sup>13</sup> Ministerial Order of 31 July 1997 (Spanish OJ No 204 of 26 August 1997 and Spanish OJ No 233 of 24 September 1998).

**TABLE 3. GULF OF LION DISPUTE SPAIN-FRANCE**

Boundaries	Spain - France continental shelf (Maps 16, 17 and 35). French ecological protection zone (Maps 16, 17).
Background	France rejects the principle of equidistance in the Gulf of Lion because the coastal configuration – concave on the French side and convex on the Spanish - benefits Spain. In addition, it considers that the proximity of the Balearic Islands should be taken into account for a fair outcome.  France is also opposed to the principle of equidistance in relation to the declaration of a Spanish fisheries protection zone (Royal Decree 1315/1997 <sup>14</sup> ), the French boundary of which was defined by applying the principle of equidistance. France lodged a protest in 1997.
Resolution	No delimitation agreement has been formalised.
Importance for fisheries	Bluefin tuna fisheries of high economic value. Restricted access to non-EU country fleets, beyond 12 nautical miles.

Source: Gutiérrez Castillo, V.L., 2007, adapted by the author.

### Map 35: Gulf of Lion

Source: Faramiñan, J.M., 2007, p. 317.

<sup>14</sup> Spanish OJ of 26 August 1997

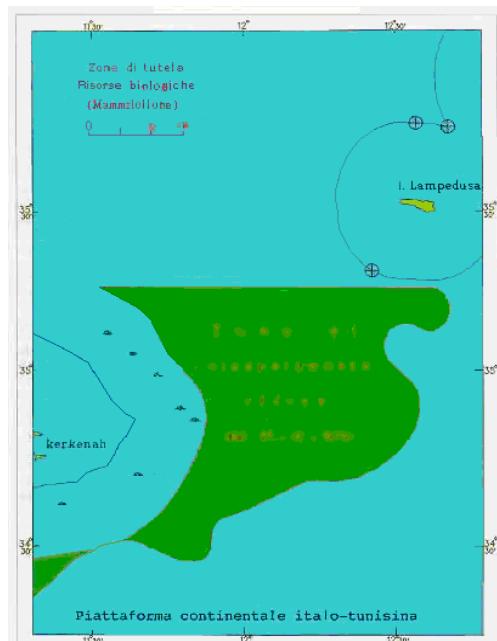

## 4.2. CENTRAL MEDITERRANEAN

TABLE 4. MAMMELLONE DISPUTE: ITALY - TUNISIA

Dispute	Historic fishing rights.
Background	<p>In 1951, Tunisia created a reserved fishing zone for national boats, 3 nautical miles wide as from the baselines, except in the part of the coast that runs between Ras Popoudia and the Libyan border, where a bathymetric criteria was applied (50 metres deep) to determine the breadth of the zone. According to this delimitation, the fishing reserve extends to 20 nautical miles from the Italian islands of Lampedusa and Lampione. This fishing zone is known as Mammellone (Map 36) and is rich in fish, particularly the waters close to Italy (Lampedusa island).</p> <p>In 1963, 1971 and 1976, fishing agreements were signed between Italy and Tunisia.</p> <p>In 1973, Tunisia extended its territorial sea to 12 nautical miles and, in order not to prejudice Italy, signed a fishing agreement (1976) allowing Italian fishermen to fish in the Tunisian territorial sea, except in the area of Mammellone. This agreement only remained in force for three years and another has not been signed to replace it.</p> <p>In 1979, Italy declared Mammellone a repopulation area and prohibited fishing.</p> <p>In 1988, the Italian and Tunisian navies signed a cooperation agreement to patrol these waters and thus avoid disputes.</p>
Resolution	There has been no delimitation agreement.
Importance for fisheries	<p>Resource protection.</p> <p>A Specially Protected Area of Mediterranean Importance could be created, as anticipated in the 1955 Protocol.</p>

Source: Gutiérrez Castillo, V.L., 2009; Scovazzi, T., 1995, adapted by the author.

Map 36: Mammellone

Source: Ministry of Defence.  
Italian-Tunisian continental shelf

**TABLE 5. STRAIT OF SICILY DISPUTE: MALTA-LIBYA**

Boundaries	Continental shelf (Map 37).
Background	On 23 May 1976, both countries agreed to the arbitration of the International Court of Justice regarding delimitation of the boundary corresponding to the continental shelf. Malta asked the Court to define the boundary, and Libya was in favour of defining a boundary on the basis of an agreement between the two parties.
Resolution	On the basis of the North Sea precedent, the Court established that principles of fairness had to be applied. The procedure followed was to first establish an equidistant line and then qualify it, with a 67 n.m. extension. This <a href="#">ruling</a> was the first passed after the approval of UNCLOS.

Source: Gutiérrez Castillo, V.L., 2007 and 2009, and Mazen, A., 2009 adapted by the author.

**Map 37: Malta-Libya**

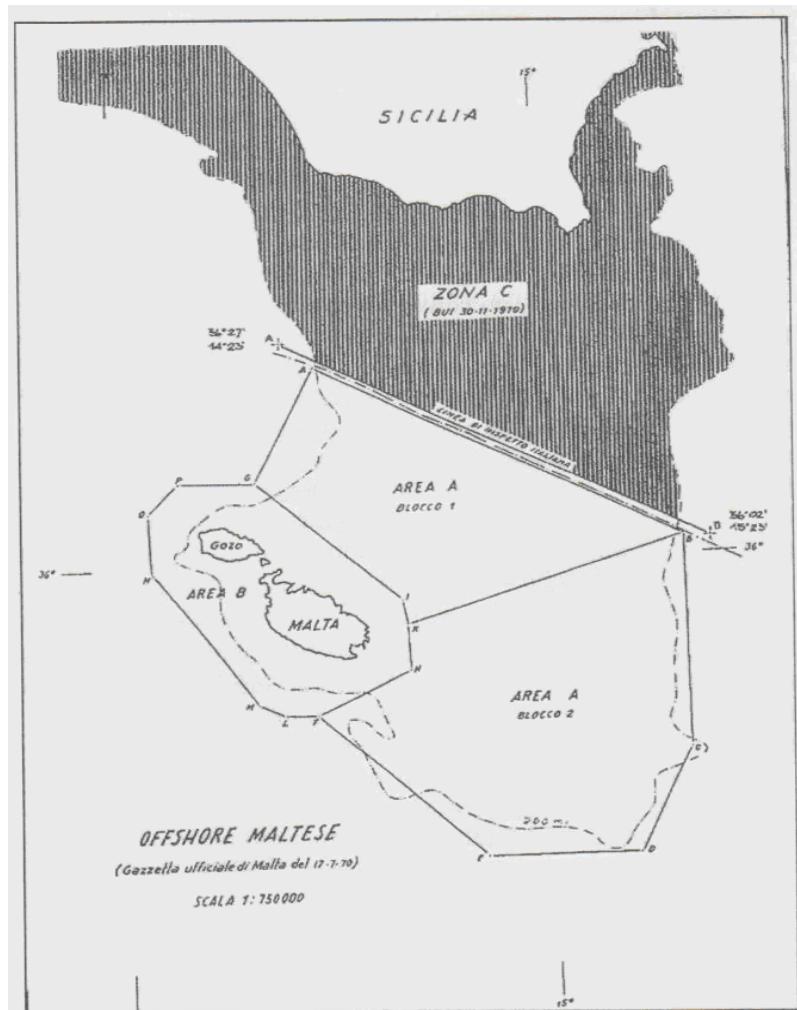

Source: Scovazzi, T., 1995, p. 155.

**TABLE 6. SICILIAN CHANNEL DISPUTE: ITALY-MALTA**

Boundaries	Continental shelf (Map 38).
Background	Malta made an initial proposal to delimit the continental shelf with Italy in 1965, with the aim of undertaking oil prospecting. In 1970, Italy stated its interest in reaching an agreement, accepting the principle of equidistance proposed by Malta. This agreement is considered a provisional agreement, awaiting the final version. Malta proceeded to define two areas, A and B, for prospecting (Map 38). This partial and provisional agreement is presented by jurists as an unusual case that establishes a <i>modus vivendi</i> in which both states have come to an agreement without the need for a formal document.
Resolution	The delimitation affects the seabed to a depth of 200 m, using a median line between Malta and the southern coast of Sicily. This delimitation only affects a small part of the median line.

Source: Faramiñán, J.M., 2007, adapted by the author.

### Map 38: Delimitations: Italy-Malta

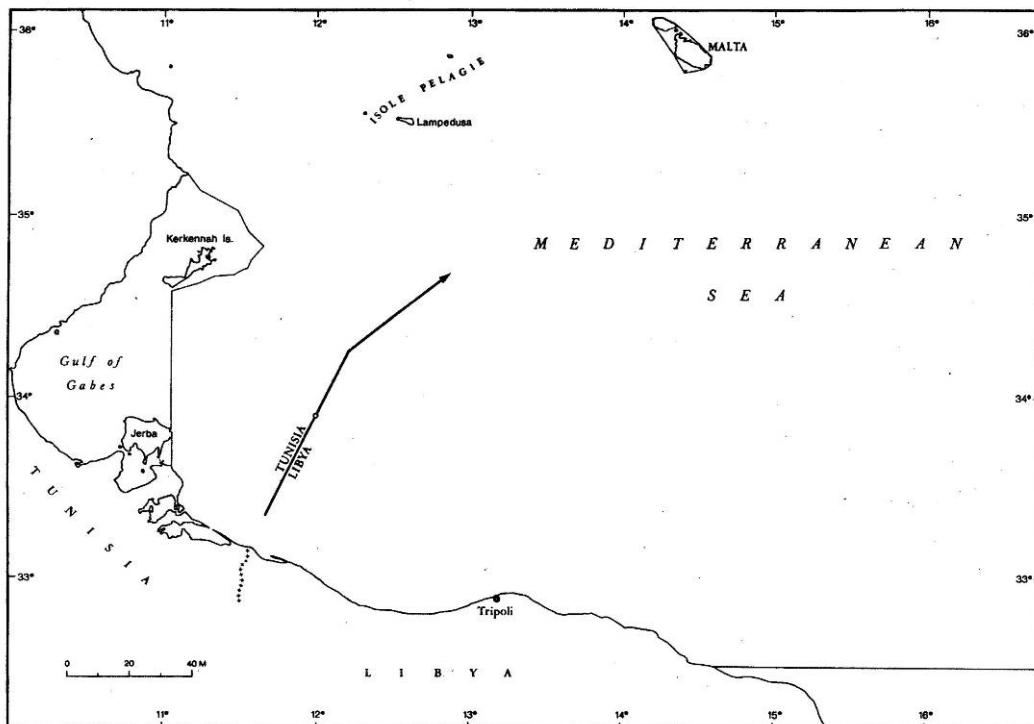

Source: Faramiñán, J.M., 2007, p. 279.

**TABLE 7. GULF OF GABES DISPUTE: TUNISIA-LIBYA**

Boundaries	Continental shelf (Map 39).
Background	<p>The delimitation of the continental shelf was raised due to economic interest in the mineral resources of this shelf.</p> <p>On 24 February 1977, both countries agreed to submit the issue to the arbitration of the International Court of Justice and asked the Court to indicate the procedure to be followed in its delimitation:</p> <ul style="list-style-type: none"> <li>- Tunisia proposed four lines, two based on geomorphological and geological factors and two on coastal geography.</li> <li>- Libya proposed a course made up of two segments, drawing on different criteria, in particular its own legislation on oil extraction. It also noted the rights a state has to the continental shelf and also referred to geomorphological factors (both geological materials and the direction of the shelf).</li> </ul>
Resolution	<p>'The <a href="#">International Court of Justice in 1982</a> rejected the arguments of both parties and constructed a boundary line between the two made up of two segments: a) one comprising a line that starts from the final point of the land (at Ras Ajdir), passing through 33° 55' North and 12° 00' East, in a north-easterly direction, with an angle of close to 26° to the east of the Ras Ajdir meridian - 34° 10' 39" North parallel; b) a second segment, starting from the last coordinate indicated and continuing north-east with an angle of close to 52° (Gutiérrez Castillo, V.L., 2009, p. 149).</p>

Source: Gutiérrez Castillo, V.L., 2009, adapted by the author.

### Map 39: Gulf of Gabes

Source: Francalanci G., Scovazzi T., 1992.

**TABLE 8. GULF OF SIDRA DISPUTE: LIBYA - ITALY**

Boundaries	Continental shelf (Map 27).
Background	<p>The delimitation of the continental shelf between Libya and Italy is dependent, on the one hand, on the outcome of the delimitation of the CS between Italy and Malta and, on the other, on the fact that Libya has chosen to declare the Gulf of Sidra an historic bay. This means that Libya considers that the delimitation of the continental shelf should be conducted on the basis of the straight baseline that closes off this gulf, meaning that the rest of its maritime spaces are moved northwards.</p> <p>In 2005, Libya sent People's Committee Decision No 104 concerning straight baselines for measuring the breadth of its territorial sea and maritime zones (Law of the Sea Bulletin No 59<sup>15</sup>) to the UN Secretary General.</p> <p>Libya has declared a fisheries protection zone (Decision No 105, 2005) that is measured from the straight baseline that closes off the Gulf of Sidra, enabling Libya to prohibit all fishing activity on the part of anyone without authorisation.</p>
Resolution	There has been no delimitation agreement.
Importance for fisheries	The waters claimed by Libya are of high fishing value, particularly tuna, and this has already led to conflict between the two states.

Source: Faramiñán, J.M., 2007; Gutiérrez Castillo, V.L., 2009, adapted by the author.

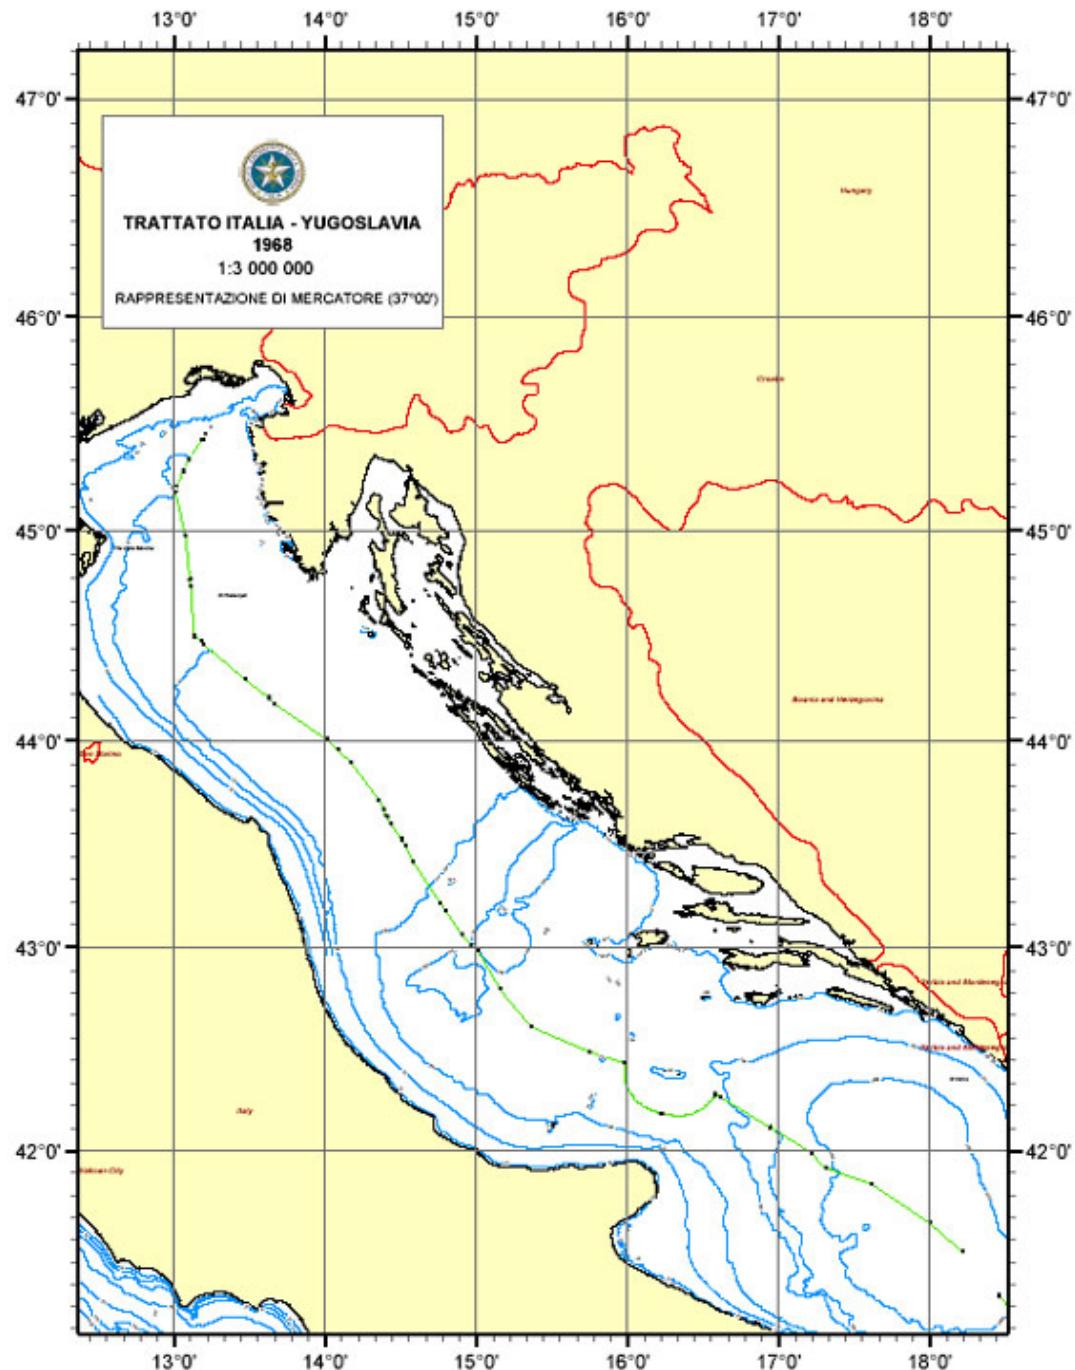

**TABLE 9. ITALY-YUGOSLAVIA**

<b>CONTINENTAL SHELF</b> (Maps 40 and 41)	
Background	<p>There are two different possibilities:</p> <ul style="list-style-type: none"> <li>- To establish an equidistant boundary between the coasts of the states, both opposite and adjacent.</li> <li>- To establish an equidistant boundary that takes into account not only the continental masses of both states but also the islands existing in the zone and the course of the straight baselines that were being prepared by Italy.</li> </ul>
Resolution	<ul style="list-style-type: none"> <li>- Italia and Yugoslavia signed an agreement on 8 January 1968 regarding the delimitation of their respective continental shelves, and this came into force in January 1971. It was the first of its kind in the Mediterranean.</li> <li>- It was agreed to establish an equidistant line corrected by the existence of islands, which would be considered part of the coast for the purposes of delimitation.</li> </ul> <p>With the break-up of Yugoslavia, Croatia inherited virtually the whole boundary of the continental shelf delimited with Italy in 1968. Due to Slovenia's geographic location and the short distance between its coast and that of Italy, the need to delimit beyond the territorial sea was not raised with Slovenia.</p>
<b>FISHING AGREEMENTS</b>	
Area affected	Yugoslav exclusive fisheries area.
Background	<ul style="list-style-type: none"> <li>- In 1948, Yugoslavia established a 4 n.m. fisheries exclusion zone in the strip adjacent to its territorial sea.</li> <li>- Italy negotiated bilateral fishing agreements with Yugoslavia (between 1949 and 1973, six agreements were signed).</li> <li>- In 1983 an agreement was concluded regarding fishing in the Gulf of Trieste, and this envisaged the creation of a common fisheries zone.</li> </ul>
Resolution	There has been no official confirmation from Italy nor from the successor countries to Yugoslavia in the zone in question, Croatia and Slovenia, as to whether the 1983 agreement remains in force or not.

**TABLE 10. PIRAN BAY DISPUTE: CROATIA-SLOVENIA**

Dispute	Slovenian access to the high seas.
Background	<ul style="list-style-type: none"> <li>- Slovenia's location as a semi-enclosed state means that it has no access to the high seas.</li> <li>- There is a delimitation dispute over the land border between Croatia and Slovenia near to Piran Bay in the valley of the Dragonja River. Slovenia considers that, where it meets the sea, both banks are under its sovereignty.</li> <li>- For the delimitation of the maritime boundary in Piran Bay, Croatia defends the principle of equidistance (Art. 15 of UNCLOS). Slovenia agrees that Article 15 should be applied but that paragraph 2, where it indicates that historic title may overrule the principle of equidistance, should be enforced. Slovenia claims sovereign rights over all the waters of the bay.</li> <li>- In 2001, both countries signed the Drvons Drvonšek-Račan Agreement (Map 42) which established that the boundary in Piran Bay would begin at the mouth of the Dragonja River and follow a straight line to a point located 1 200 metres from the Croatian coast and 3 600 metres from the Slovenian coast. From this point, the delimitation line would run as far as the border with Italy, creating a corridor within Croatia's territorial sea in order to connect with the high seas (Map 43 and 44). This agreement was later rejected by Croatia.</li> <li>- In 2003, Croatia created an ecological and fisheries protection zone. Slovenia thereupon began to consider the possibility of exercising jurisdictional rights beyond the boundaries of its territorial sea. In 2004, Croatia decided not to apply the ecological and fisheries protection zone to EU Member States. Slovenia thus decided not to move forward with its intended extension of its jurisdiction.</li> <li>- In October 2005, Slovenia created an ecological protection zone and the Slovenian continental shelf was proclaimed. In December 2005, it extended its fishing zone to the middle of Piran Bay. In January 2006 it created a fishing exclusion zone.</li> <li>- Croatia does not recognise Slovenia's sovereignty over all the waters of Piran Bay. Croatia only accepts the boundary of the Slovenian territorial sea in the bay.</li> </ul>
Resolution	On 4 November 2009, under the auspices of the EU, a political agreement was reached between the two parties, establishing that the dispute would be resolved by a Court of Arbitration made up of five experts in international law. The Court will determine the boundary between the two countries, Slovenia's access to the high seas and the system of navigation in the border zone. On 20 November of that same year, the Croatian Parliament ratified the arbitration agreement. The process is taking its time in Slovenia, however, as the government has announced that a referendum must be held before Parliament can decide on this ratification <sup>16</sup> .
Importance for fisheries	The geographical area of Piran Bay is very small (19 km <sup>2</sup> ) and its maritime potential insignificant. This area is of no importance to fishing.

Source: Faramiñán J. M., 2007; Avbelj M., and Letnar J., 2007; Blake C.H., Topalovic, D., 1996; Vidas, D., 2008, adapted by the author.

<sup>16</sup> The two Prime Ministers, Jadranka Kosor for Croatia and Borut Pahor for Slovenia, had agreed in Stockholm to present the agreement to their respective parliaments for ratification by December.

TABLE 11. KLEK-NEUM BAY DISPUTE: BOSNIA HERZEGOVINA-CROATIA

Dispute	Historic rights in the Klek-Neum Bay and Bosnia-Herzegovina's maritime access to the Adriatic (Map 45).
Background	<p>The maritime boundary between Bosnia-Herzegovina and Croatia was established as part of a border treaty between the two countries in 1999, in accordance with UNCLOS. Following the treaty, two protests were raised:</p> <ul style="list-style-type: none"> <li>- Dubrovnik County claimed that the end of the Klek peninsula had historically belonged to it and therefore did not belong to Bosnia-Herzegovina, as established in the treaty, but to Croatia.</li> <li>- Croatia claimed the islets allocated to Bosnia-Herzegovina around the Klek peninsula, for historic reasons.</li> </ul> <p>The question has been reopened since 2002, with Croatia's intention to build a bridge across the Mali Ston Canal (between the town of Klek and the Pelješac peninsula), which is located outside of the territory in dispute but which Bosnia-Herzegovina interprets as a possible obstacle to navigation in the Neum Bay.</p>
Resolution	No delimitation agreement has been formalised.
Importance for fisheries	The geographical area of the Klek-Neum Bay is very small and its maritime potential insignificant. This area is of no importance to fishing.

Source: Blake C.H., 1996; Klemenčič, M., Topalović, D., 2009, adapted by the author.

### 4.3. EASTERN MEDITERRANEAN

**TABLE 12. AEGEAN SEA DISPUTE: TURKEY-GREECE**

Boundaries	Delimitation of the continental shelf and territorial sea between Greece and Turkey in the Aegean Sea (Map 46).
Background	<ul style="list-style-type: none"> <li>The maritime spaces of Greece and Turkey are peppered with islands, islets and rocks that appear at low tide, located at disparate distances and which make any proposed delimitation difficult. There are also disagreements over the sovereignty of some islands.</li> <li>For delimitation of the continental shelf, Greece defends the principle of equidistance and grants full effect to the islands, while Turkey is in favour of taking the special geographical situation into account, applying the principle of fairness. In this respect, an imbalance can be seen between the total area of the Greek islands and their small population as opposed to a much larger Turkish population and their also much larger territory. The location of the Kastelorizo group of Greek islands (Megisti in Turkish), far from Greek territory (60 n.m. from Rhodes, but very close to Turkey (1 n.m.), forms another factor of imbalance.</li> <li>The marked differences between both positions has given rise to various international disputes in recent decades (1976, 1984, 1987, 1996).</li> </ul>
Resolution	<ul style="list-style-type: none"> <li>There has been no agreement for the delimitation of the continental shelf or territorial sea.</li> </ul>
Importance for fisheries	The waters between Greece and Turkey are of high fishing value.

Source: Faramiñán, J. M., 2007; Inan, Y. and Acer, Y., 2002; Blake, G.H., 1992, adapted by the author.

**TABLE 14. LONGITUDE  $32^{\circ} 16' 18''$  DISPUTE: CYPRUS-EGYPT-TURKEY**

Boundaries	Exclusive economic zone between Cyprus and Egypt (Maps 24 and 26).
Background	<ul style="list-style-type: none"> <li>In 2002, Cyprus and Egypt signed an agreement for the delimitation of an EEZ between both states<sup>17</sup>, by means of an eight-point median line, points 1 and 8 of which could be revised for future EEZ delimitations with other neighbouring states (Turkey, Greece, Lebanon and Israel).</li> <li>Turkey protested the agreement line of 2003, opposing all the points with geographic coordinates west of longitude <math>32^{\circ} 16' 18''</math> E. This means that it does not accept points 1 to 6 of the 2003 agreement and only accepts points 7 and 8. According to Turkey, delimitation of the EEZ west of longitude <math>32^{\circ} 16' 18''</math> should be achieved by means of agreements between the states affected.</li> </ul>
Resolution	EEZ delimitation agreement between Cyprus and Egypt (2003) opposed by Turkey.

Source: Faramiñán, J.M., 2007; Gutiérrez Castillo, V.L. 2009; Inan, Y. and Acer, Y., 2002, adapted by the author.

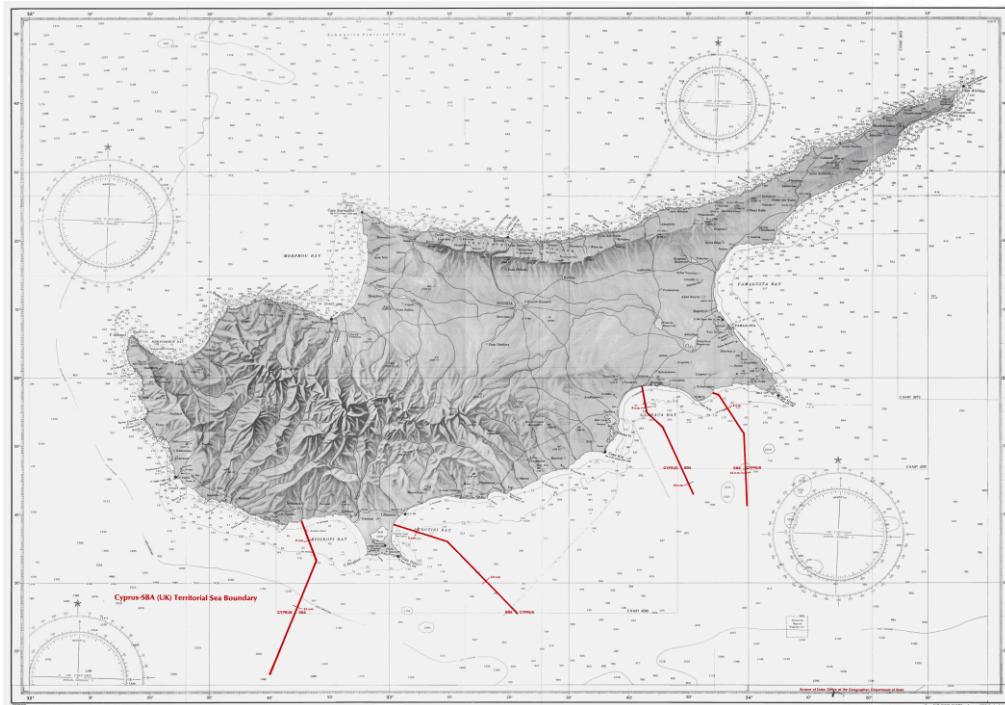

<sup>17</sup> The agreement of 17 February 2003 is the first of its kind to be signed in the Mediterranean (Gutiérrez Castillo, V.L., 2009).

**TABLE 15. AKROTIRI AND DHEKELIA DISPUTE: CYPRUS-UNITED KINGDOM**

Boundaries	Cypriot EEZ with hypothetical Akrotiri and Dhekelia EEZ (not declared), (Maps 24 and 48).
Background	<p>Two military bases with British sovereignty are located on the island of Cyprus: Akrotiri and Dhekelia.</p> <p>By virtue of the 1960 Treaty establishing the Republic of Cyprus, this island cannot claim the waters situated between the lines described for the delimitation of Akrotiri and Dhekelia (Part A of the Treaty), which are situated at the far ends of each of the two British bases, as part of its territorial sea. In the case of Akrotiri, these lines project out in a divergent manner (tending to separate) and in the case of Dhekelia in a convergent manner (tending to meet at a distant point).</p> <p>In 2002, Cyprus and Egypt signed an EEZ delimitation agreement. In this agreement, Cyprus draws the delimitation line in such a way that it does not affect the line of projection of the western line set for the Akrotiri base, because for the Dhekelia base it is sufficient to locate the EEZ beyond the point where it is calculated that the two lines for its delimitation converge.</p> <p>In 2004, Cyprus proclaimed an EEZ Law<sup>18</sup> establishing its external boundaries but, in this, it specified that when its EEZ 'was superimposed on that of another state with <i>coasts opposite</i> those of the Republic of Cyprus, the delimitation between them would be undertaken in the form of an agreement'<sup>19</sup>. With Akrotiri, a delimitation agreement should be reached but this is not reflected in the 2004 law, indicating that only frontal delimitation will be agreed and not lateral, as would be the situation in this case.</p>
Resolution	There has been no delimitation agreement.

## 4.4. DISPUTES IN THE BLACK SEA

TABLE 16. SERPENTS' ISLAND DISPUTE: ROMANIA-UKRAINE

Boundaries	Delimitation of the continental shelf between Romania and Ukraine (Maps 21 and 22).
Background	<p>Serpents' Island previously belonged to Turkey, Russia and finally Romania until, at the end of the Second World War, it passed to the USSR, which built a military base there. When the USSR disappeared, it passed to Ukraine.</p> <p>Romania maintains that Serpents' Island should be considered under the provisions of Article 121 of UNCLOS: 'Rocks which cannot sustain human habitation or economic life of their own shall have no exclusive economic zone or continental shelf'; they can only create territorial sea.</p> <p>According to Ukraine, it is an island and is inhabited (in 2006 the settlement reached the legal category of small town), and so it can create jurisdictional waters, in addition to territorial sea.</p> <p>In 2004 Romania referred to the International Court of Justice for a decision.</p>
Resolution	<p><a href="#">In 2009 the International Court of Justice</a> ruled that Serpents' Island should be considered under Article 121 of UNCLOS and, as such, could not be taken into account in the delimitation of the continental shelf and EEZ.</p>

Source: International Court of Justice, 2009, adapted by the author.

## 4.5. OTHER JURISDICTIONAL SITUATIONS

**TABLE 17. SPAIN-ALGERIA**

'Neither Spain nor Algeria have begun negotiations to delimit their maritime spaces. The establishment of the boundary between both countries may be of special interest (...) given that near the imaginary median (Map 50) that separates the Algerian coast from the Spanish islands (Balearics) there may be resources open to future exploitation' (Faramiñán, J.M. 2007).

**Map 50: Hypothetical Spain-Algeria delimitation**

Source: VLIZ, 2009, adapted by the author.

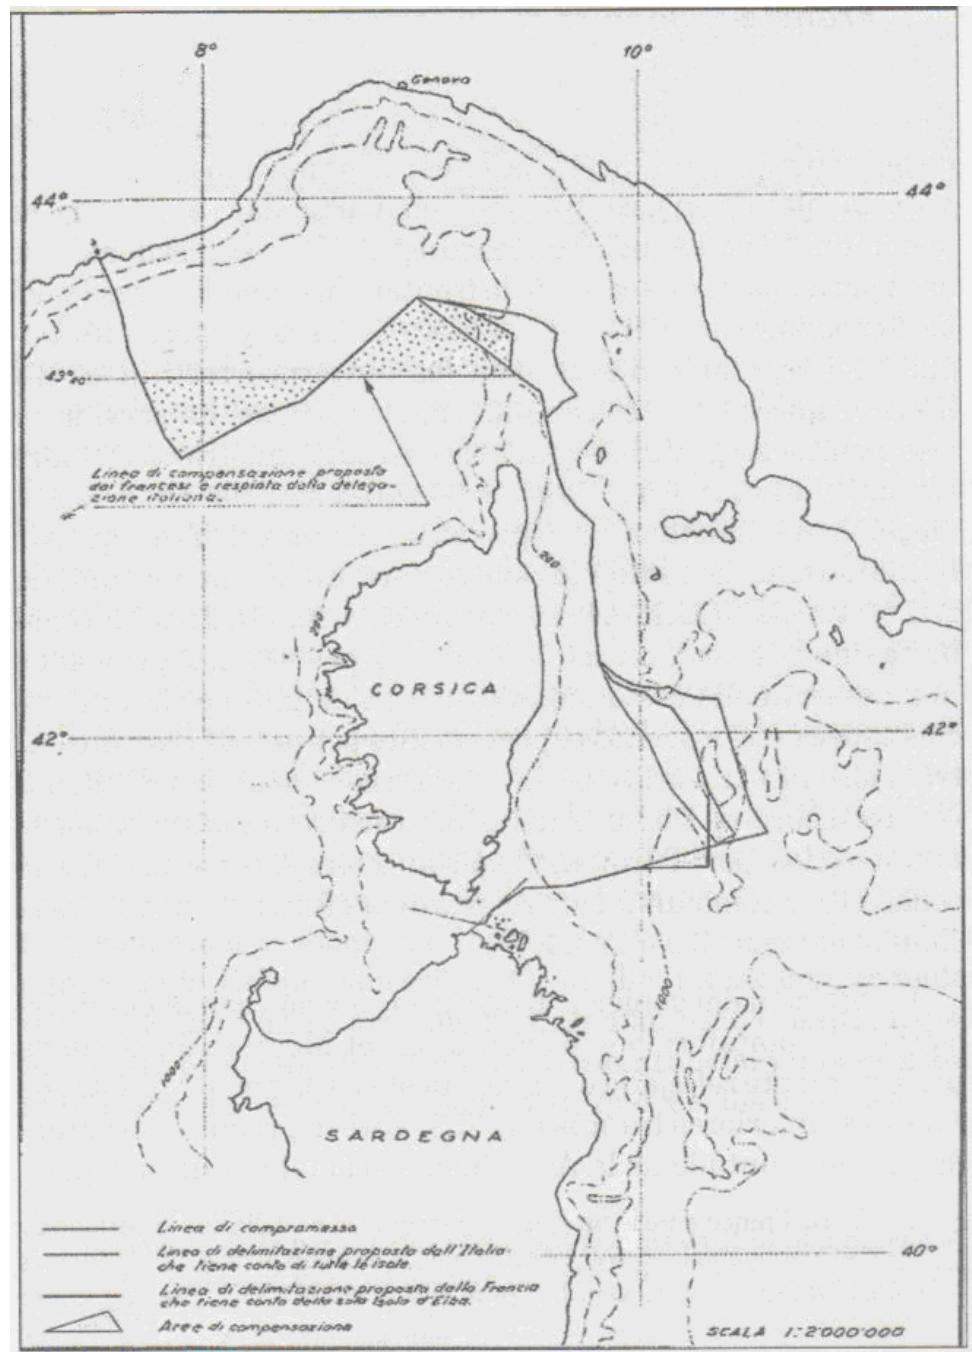

**TABLE 18. MONACO-FRANCE**

'The Principality of Monaco (...) concluded an agreement for the delimitation of its maritime spaces with France on 16 February 1984 (...) by which a maritime area of 280 km<sup>2</sup> was allocated to it, some 186 times the size of its land mass. (...) The boundary lines established consist of two parallel lines forming a corridor (...). The establishment of a maritime corridor is the only way of ensuring Monaco's free access to the high seas, (...) the Monegasque coast being enclosed by the French coast, which is of concave configuration. Application of the principle of equidistance would thus have the outcome of an inevitable sealing off of the principality's maritime space within French jurisdictional waters.' (Faramiñán, J.M. 2007, pp. 257-261), (Map 17).

**TABLE 19. GULF OF GENOA: FRANCE-ITALY**

'French-Italian negotiations for the delimitation of their continental shelf failed for a number of reasons, including the following, in particular (...): the two parties did not agree on an assessment of the coastal physiognomy, specifically the effect that the profile of the north-eastern coast of the French island of Corsica (pointed and projecting) would have on the boundary. This pointed nature of the coast of the French island would have a decisive impact on the delimitation of the boundary, a position which although logical is not very well-received by Italian doctrine.' (Faramiñán, J.M. 2007, pp. 311, 312), (Map 51).

**Map 51: Proposed delimitation in the Gulf of Genoa**

Source: Faramiñán, J.M., p. 313, 2007.

## 5. JURISDICTIONAL WATERS AND GOVERNANCE IN THE MEDITERRANEAN AND BLACK SEAS

Governance in the Mediterranean and Black Seas occurs on different levels, depending on the jurisdictional structure of the maritime space – with responsibilities on the part of coastal and third countries – and the different levels of political-administrative (supra-national, regional, sub-regional) organisation.

On a national level, each sectoral policy of Mediterranean and Black Sea states is pursued by that country's own administration, just as each international agreement is performed within its own set of rules (COM(2009)466 final).

The UNCLOS provisions governing the conservation and use of living marine resources in the EEZ are applicable in both the Mediterranean and the Black Seas but it being understood that, in this space, the coastal state has sovereign rights in this respect, which means that its decisions are absolute in this regard (Casado Raigón, R., 2008). The freedom of the high seas and fundamental obligations to ensure the preservation of the biological resources of the high seas and to cooperate on both their conservation and management also apply.

According to UNCLOS, the duty to cooperate particularly affects the coastal states of enclosed and semi-enclosed seas, as is the case of the Mediterranean and the Black Seas. Article 123 of UNCLOS notes that these states, directly or through an appropriate regional organisation, shall endeavour to coordinate the management, conservation, exploration and exploitation of the living resources of the sea.

In addition, there is one feature of the Mediterranean that has an impact on the need to cooperate with regard to its resource management. This is the fact that, unlike other continental seas such as the Black Sea, a large part of the Mediterranean comprises high seas<sup>20</sup>, which raises specific management problems. 'This means that large sectors of Mediterranean waters remain outside the jurisdiction or sovereignty of the coastal states, which lack the prescriptive or executive power that would enable them to regulate in detail the human activities conducted beyond these areas, including those aimed at protecting the marine environment and those aimed at establishing the conditions for the exercise of fishing'. (Paris Declaration of 13 July 2008 and corresponding reference to the Horizon 2020 initiative).

In addition to the duty of states bordering on enclosed and semi-enclosed seas to cooperate, UNCLOS allocated them an important role of institutionalised cooperation, i.e., cooperation channelled through supranational, regional and sub-regional organisations. In this respect, cooperation forms one of the pillars of biological resource conservation and management of the high seas. Cooperation on maritime spaces is thus established through:

Regional sea agreements, devoted to environmental protection but the scope of which is gradually extending to include integrated sea management.

Regional fisheries organisations, the scope of which is specific from a geographic or species point of view.

<sup>20</sup> Approximately 16% of the maritime space is made up of territorial seas and 31% of different maritime zones. (Declaration of Paris of 13.7.2008 and corresponding reference to the Horizon 2020 initiative).

Bilateral or multilateral associations (joint monitoring zones for fisheries management, sanctuaries and other protected maritime areas), (Livre Bleu, 2009).

## 5.1. INTERNATIONAL FRAMEWORK

On an international level, there are a large number of bodies (FAO, IMO, etc.) and agreements or treaties for the Mediterranean and Black Seas dealing with governance of the oceans and related to protection of the marine environment, biodiversity, fisheries and fishing activities.

The main international treaty on the use of the sea is UNCLOS (1982), which has been ratified by a majority of the states in the Mediterranean, the EU and the Black Sea (Table 8), and which establishes a general framework for most activities (navigation, resource exploitation and other economic uses of the sea, protection of the marine environment and research). One of the main international agreements affecting the Mediterranean and the Black Sea in relation to the management of its fishery resources is the **United Nations Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks** (SFS), which was adopted in 1995 and is known as the New York Agreement (see Section 3.2.), (Table 8).

In addition to this important international agreement, the FAO has established a framework of global governance for fisheries through the **Code of Conduct for Responsible Fisheries** (FAO, 1995), which establishes international principles and standards of conduct aimed at ensuring the conservation, management and development of living aquatic resources (European Environment Agency, 2005). To this must be added the Agreement To Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas (adopted by the FAO in 1993), which came into force on 24 April 2003 (see Section 3.2.).

There follows a list of other international treaties and agreements of particular relevance to the marine environment and which are applicable to the Mediterranean and Black Seas. Their ratification by the coastal states of both seas is given in Table 83.

On heritage: the **Convention for the Protection of the Underwater Cultural Heritage** (aim of the 2001 Convention on the Protection of the Underwater Cultural Heritage), which has currently only been ratified by six Mediterranean countries (European Commission, 2008).

On biological diversity: the 1992 **Convention on Biological Diversity** (CBD).

For the protection of endangered species: the **Convention on Migratory Species** (1979), and the **Convention on the Conservation of European Wildlife and Natural Habitats** (1979), this latter only applicable to EU Member States.

Navigation agreements: **SOLAS** (1974), **MARPOL conventions** (1973/1978), **International Convention on Maritime Search and Rescue** (1989) and others adopted by IMO.

Treaties on the prevention of criminal conduct: Convention for the Suppression of Unlawful Acts Against the Safety of Maritime Navigation (1988) and the Protocol against the Smuggling of Migrants by Land, Sea and Air (2000).

## 5.2. REGIONAL FRAMEWORK

The Mediterranean and Black Sea states have adopted a series of regional treaties and initiatives aimed at protecting the marine environment, biodiversity, navigation and fisheries, and these form the main framework for cooperation on governance of the maritime space.

The first of these regional initiatives was the UNEP Regional Seas Programme, the first action of which was to define a **Mediterranean Action Plan**, adopted in its final form in Barcelona in 1975. The aim of this plan is to counter the degradation of the marine environment and promote the sustainable development of its resources. There are six Regional Activity Centres (RACs) in place to manage the Plan.

<sup>21</sup> For a list of the main agreements affecting the Mediterranean, see Annex II.

Within the context of the Mediterranean Action Plan there is the **Barcelona Convention for the Protection of the Mediterranean Sea from Pollution** (Barcelona Convention), adopted in 1976 and amended in 1995, which sets out the general principles and institutional framework for protecting the marine environment. To date, the Barcelona Convention has led to the application of seven protocols related to: dumping, prevention and emergency response to pollution by hydrocarbons or other harmful substances, land-based sources of pollution, specially protected areas and biodiversity, protection of pollution from offshore activities, cross-border movements of hazardous waste and integrated coastal zone management (European Commission, 2009). All Mediterranean states have ratified this convention (Table 83).

**Table 84: The Barcelona Convention (BARCOM) and its protocols**

ACRONYM	RATIFIED BY	OTHERS
BARCOM	Cyprus, France, Greece, Italy, Malta, Slovenia, Spain	+ 14 Mediterranean states
BARCOM (dumping protocol)	Cyprus, France, Greece, Italy, Malta, Slovenia, Spain	+ 14 Mediterranean states
BARCOM (revised dumping protocol)	Cyprus, France, Italy, Malta, Slovenia, Spain	+ 8 Mediterranean states
BARCOM (prevention and emergencies protocol)	France, Malta, Slovenia	Another 3 Mediterranean states
BARCOM (land spillages protocol)	Cyprus, France, Greece, Italy, Malta, Slovenia, Spain	+ 14 Mediterranean states
BARCOM (land spillages protocol amended in 1996)	Cyprus, France, Greece, Italy, Malta, Slovenia, Spain	+ 5 Mediterranean states
BARCOM (protected areas and biodiversity protocol)	Cyprus, France, Italy, Malta, Slovenia, Spain	+ 7 Mediterranean states
BARCOM (offshore protocol)	Cyprus	+ 3 Mediterranean states
BARCOM (hazardous waste protocol)	Malta	+ 3 Mediterranean states

Source: Annex 9. Multilateral and EU instruments related to the seas and oceans. Green Paper.

Drawing on the first regional sea conventions, in 1992, the six Black Sea countries signed the **Convention on the Protection of the Black Sea against Pollution**, which was ratified shortly after. The 'Bucharest Convention' includes protocols on land-based sources of pollution, dumping of waste and urgent intervention in case of accidents. In order to ensure implementation of the Convention, a Commission was created made up of representatives from all the Black Sea countries. In 1993, the Black Sea Environmental Programme was set up with responsibility for preparing a plan of practical measures. The Programme helped participating countries to prepare the **Action Plan for the Black Sea**, which was completed and approved in 1996.

**Table 85: Conventions and protocols on regional waters**

MEDITERRANEAN
Convention for the Protection of the Mediterranean Sea against Pollution Approval: (Barcelona, 16.2.1976) Entry into force: 12.2.1978
BLACK SEA
Convention for the Protection of the Black Sea against Pollution Approval: (Bucharest, 21.4.1992) Entry into force: pending

Source: UNEP, 2001.

In terms of maritime transport, all Mediterranean and Black Sea states are members of the International Maritime Organisation (IMO). A large number of international agreements have been adopted through the IMO. Monitoring of compliance of IMO regulations on the part of vessels sailing in the Mediterranean is undertaken by means of two instruments:

- The Mediterranean Memorandum of Understanding (1997), (Table 83).
- The Paris Memorandum of Understanding (1982), (Table 83).

From a scientific point of view, the Mediterranean Science Commission (CIESM) is the international scientific organisation to which most Mediterranean states belong.

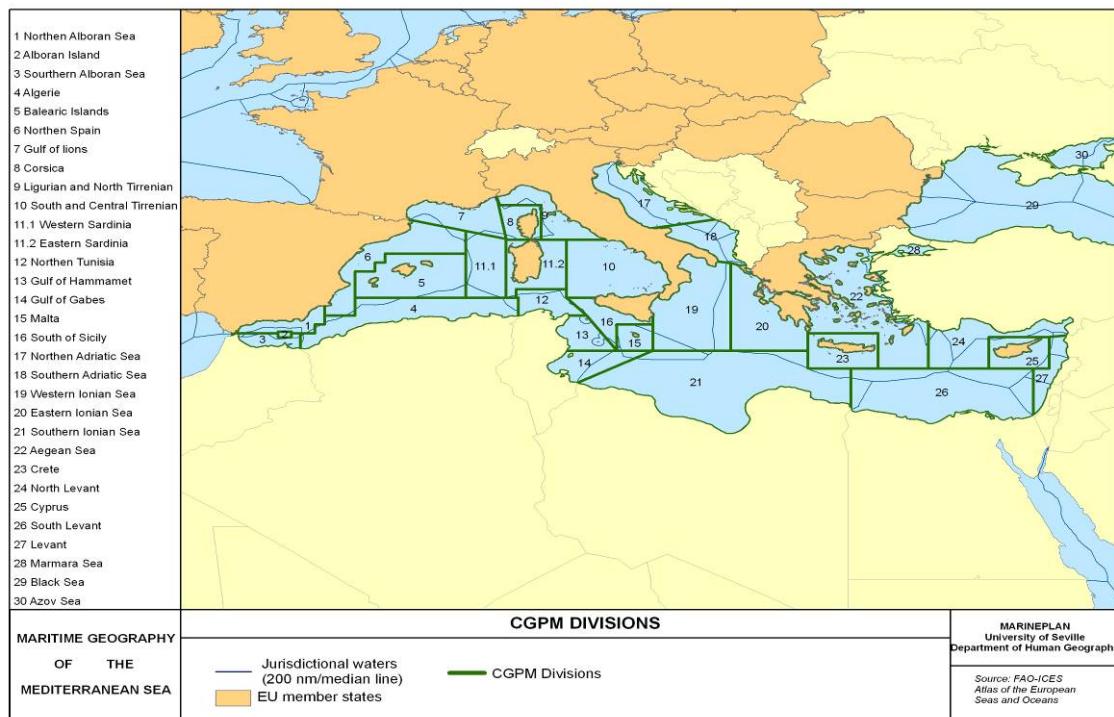

### 5.2.1. Regional organisations with authority over fisheries

The two regional organisations responsible for fisheries in the Mediterranean and the Black Sea are the following:

A) The [General Fisheries Commission for the Mediterranean](#) (GFCM), created in the context of Article XIV of the FAO Constitution by the 1949 Agreement for the Establishment of a General Fisheries Council (now Commission) for the Mediterranean, with its offices in Rome. Its aim is to promote the development, conservation, rational management and appropriate use of marine resources, and the sustainable development of fish farming in the Mediterranean and Black Seas. All Mediterranean countries are members (with the exception of Bosnia-Herzegovina), along with Japan, Bulgaria, Romania and the Republic of Serbia<sup>22</sup> (Map 52). (Casado Raigón, R., 2008).

<sup>22</sup> 'Although Egypt and Syria have not for the moment accepted the agreement in its most recently amended form (1997)' (Casado Raigón, R., 2008).

### Map 52: General Fisheries Commission for the Mediterranean

Source: FAO, ICES.

B) The [International Commission for the Conservation of Atlantic Tunas](#) (ICCAT), with its head office in Madrid, established in 1966 by the International Convention for the Conservation of Atlantic Tunas, which was amended by the Paris (1984) and Madrid (1992) Protocols. The first of these protocols, which came into force in 1994, was aimed at facilitating the European Community's access to this organisation. This Commission has jurisdiction over the conservation and management of tuna and related species in the Mediterranean Sea. Forty-four states are currently party to this convention (14 Mediterranean and non-Mediterranean states) and the European Community. (Casado Raigón, R., 2008).

### 5.3. SUB-REGIONAL FRAMEWORK

The main sub-regional cooperation treaties governing the marine environment of the Mediterranean and Black Seas are the following:

- The Agreement to Create the Pelagos Sanctuary for Mediterranean Marine Mammals (1999), signed between France, Italy and Monaco (Table 83). This created a marine mammal sanctuary in a part of the territorial waters of the signatory countries, part of France's ecological protection zone and part of the high seas.
- The RAMOGE Agreement, adopted by France, Italy and Monaco in 1978 and amended in 2003, which applies to the area between Marseille (France) and La Spezia (Italy) and sets out provisions for scientific, technical, legal and administrative cooperation in order to take joint decisions regarding integrated coastal management actions.

- The 1996 Agreement on the Conservation of the Black Sea, Mediterranean Sea and Contiguous Atlantic Area (ACCOBAMS), which has been ratified by a majority of the Mediterranean and Black Sea states.

Bilateral agreements have also been reached on a sub-regional level in the Mediterranean:

- Bilateral agreement between Italy and Greece for the protection of the marine environment of the Ionian Sea and its coastal region.

## 5.4. THE EUROPEAN UNION

Within the European Union, there are a number of different ways of participating in the governance of the maritime spaces of the Mediterranean and Black Seas (Table 85). The institutions responsible for managing some maritime activities or for formulating integrated policies have also generally established a geographical structure through which to implement their measures or policies. These institutions include the [Regional Fisheries Advisory Councils](#) (Map 53), in which the Mediterranean is considered as an integral unit; the [Marine Strategy Framework Directive](#) (2008) is another important regulatory element from an environmental point of view, although it is only binding upon EU Member States (Map 54).

In addition, the EU has exclusive competence in the sphere of international relations in the fisheries sector. It is authorised to obtain international commitments with third countries or international fisheries organisations on behalf of Member States. The European Commission negotiates fishing agreements with third countries on behalf of the EU.

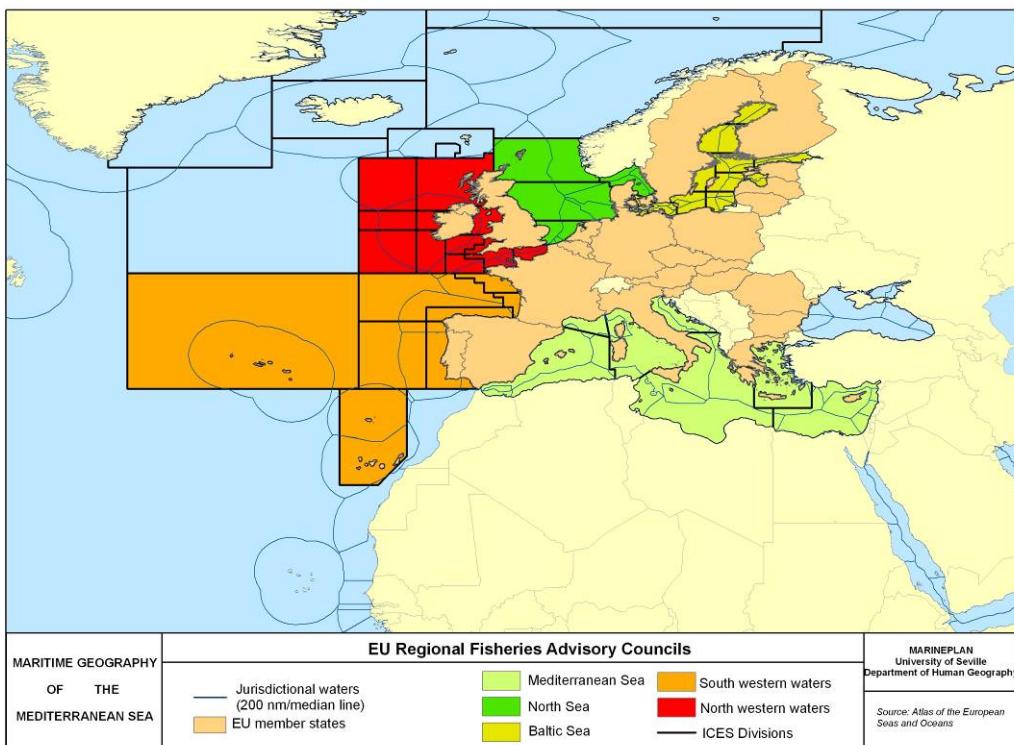

**Table 86: EU methods of participation in the Mediterranean**

<b>Marine management policies</b>	Management policies relating to the European marine-coastal space	<ul style="list-style-type: none"> <li>• Common environmental policy</li> <li>• Common spatial development policy</li> <li>• Common European coastal strategy</li> <li>• EU integrated maritime policy</li> <li>• European strategy to protect and conserve the marine environment</li> <li>• European Marine Strategy Directive</li> </ul>

Map 53: EU Regional Fisheries Advisory Councils

Map 54: Marine regions of the Marine Strategy Directive

In the EU context, there are also a number of cooperation initiatives between Member States and the coastal states of the Mediterranean and Black Seas, some of them directly related to marine environment governance (Table 87).

The main initiative is the Euro-Mediterranean Partnership (Barcelona Process), which was formalised in 1995 at the Barcelona Conference. The 27 participating countries (the then 15 EU Member States plus 12 non-EU Mediterranean states: Algeria, the Palestinian Authority, Cyprus, Egypt, Israel, Jordan, Lebanon, Malta, Morocco, Syria, Tunisia and Turkey) approved a Declaration and a programme of work. The Partnership thus establishes a multilateral framework that closely links economic and security aspects but also includes a social, human and cultural dimension.

At the Barcelona Conference in November 2005, at which the tenth anniversary of the Euro-Mediterranean Partnership was celebrated, the partners undertook to 'develop a realistic roadmap to depollute the Mediterranean by 2020'. The '[Horizon 2020](#)' initiative was thus established to reduce pollution in the region. This initiative concerns Member States, current candidate countries and partners in the European Neighbourhood Policy.

In 2008, this partnership was relaunched as the [Union for the Mediterranean](#), which includes the 27 EU Member States plus countries from the southern Mediterranean coast (with the exception of Libya) and some of the Balkan states, along with another 16 countries from the eastern Mediterranean (Livre Bleu, 2009). The Union for the Mediterranean has six priority projects, some of which are directly related to the marine environment: depollution, establishment of maritime and land highways and civil protection initiatives to combat disasters.

**Table 87: Euro-Mediterranean cooperation policies**

General Euro-Mediterranean cooperation policies	Promoted by the EU	<ul style="list-style-type: none"> <li>• Euro-Arab Dialogue</li> <li>• EC Mediterranean Policy (provisional agreement)</li> <li>• '5+5' Group</li> <li>• Euro-Mediterranean Association</li> </ul>
	Private initiatives	<ul style="list-style-type: none"> <li>• Mediterranean Forum</li> <li>• Inter-parliamentary Conference on Security and Cooperation</li> </ul>
	Other political dialogues	<ul style="list-style-type: none"> <li>• Security dialogue between Western organisations (NATO, WEU) and the MPCs</li> <li>• CSCM</li> </ul>

Source: Suárez de Vivero, J.L. 2005.

Another important cooperation initiative between the EU and the countries of the Mediterranean and Black Seas is the European Neighbourhood Policy (ENP), which was introduced in the context of the 2004 EU enlargement in order to consolidate the stability, security and well-being of all. The ENP is aimed at neighbouring countries with land or maritime boundaries and, in the Mediterranean, this relates to: Algeria, Egypt, Israel, Jordan, Lebanon, Libya, Morocco, the Palestinian Territories, Syria, Tunisia and Ukraine and, in the Black Sea, Georgia and Turkey. The central element of the European Neighbourhood Policy is made up of [Bilateral Action Plans](#) mutually agreed between the EU and each of the partner countries.

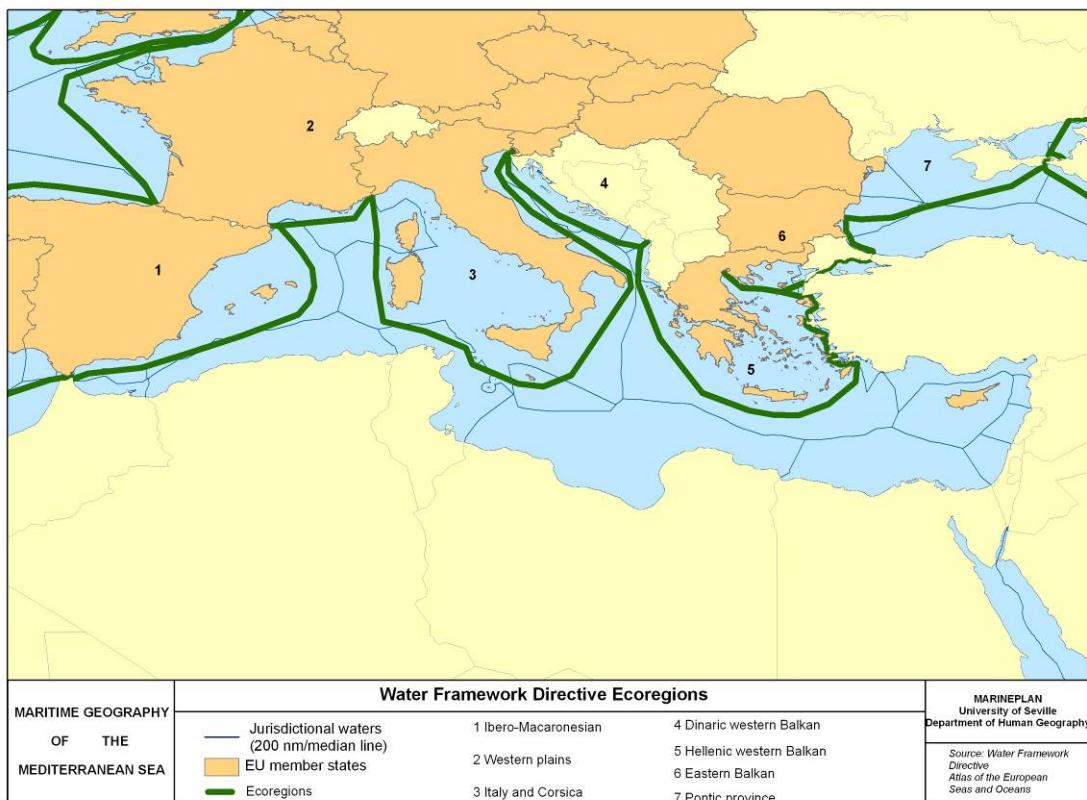

In the Black Sea, Romania and Bulgaria's accession to the EU has led to the promotion of cooperation programmes and policies aimed at encouraging the region's development and cohesion. These initiatives are the Neighbourhood Policy (COM(2004)373 final), EU-Russia Environmental Cooperation (COM(2001)772 final) and the Black Sea Synergy (COM(2007)160 final).

With regard to Russia, there is an independent relationship implemented by means of a [Strategic Partnership](#) that covers 'four common spaces' (the economy; freedom, security and justice; external security; research and education). This agreement came to an end in 2008, however, and the negotiation process to establish new relations is currently at a standstill.

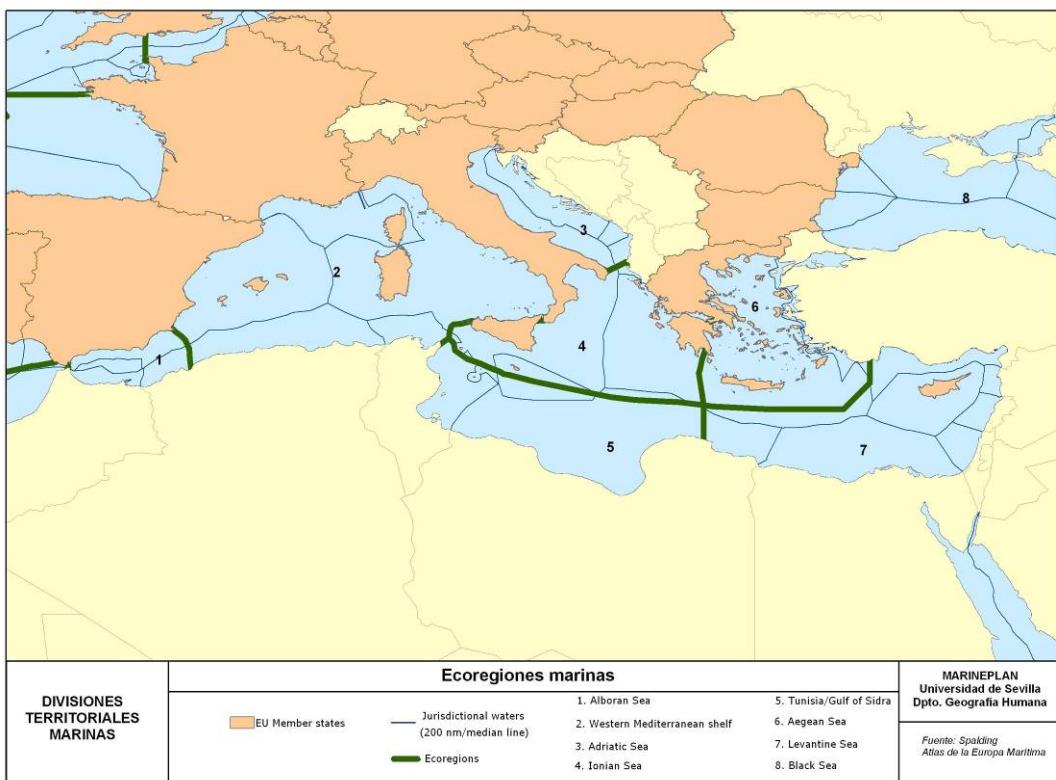

## 5.5. OTHER SPHERES OF GOVERNANCE

For operational purposes, the Mediterranean and Black Seas are usually divided into areas, sub-regions or sub-divisions based on either their geological, geomorphological, hydrological or biological formation or their legal-administrative structure. Areas defined by physical criteria (as opposed to political-administrative ones) rely on the logic of natural events and enable spaces for intervention, action and management measures to be defined and delimited. Examples of such areas can be found on the maps of the ecoregions (Maps 55, 56, 57, 58).

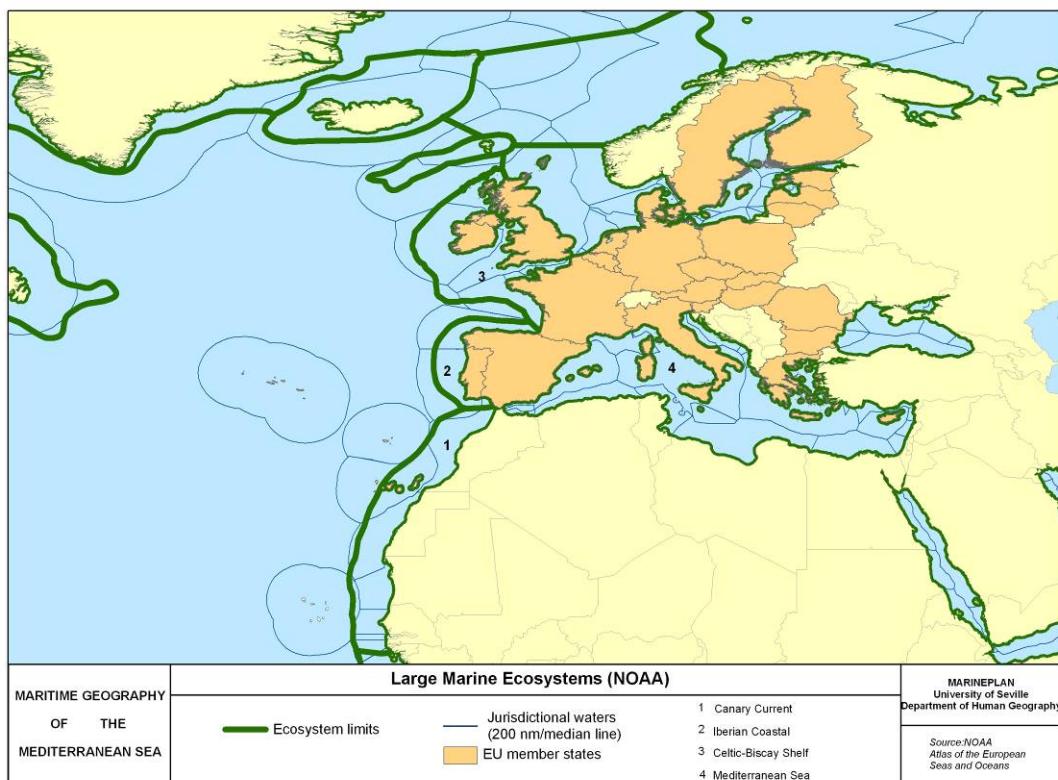

**Map 55: Water Framework Directive. Ecoregions**

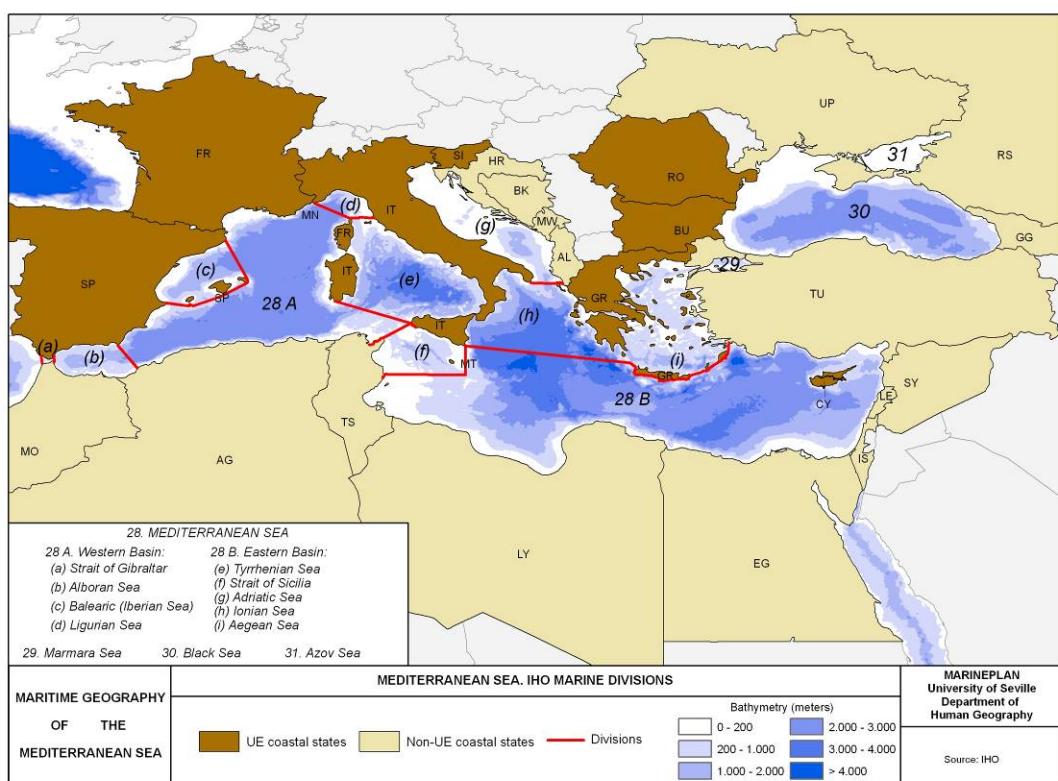

## Map 56: Marine ecoregions (MEOW)

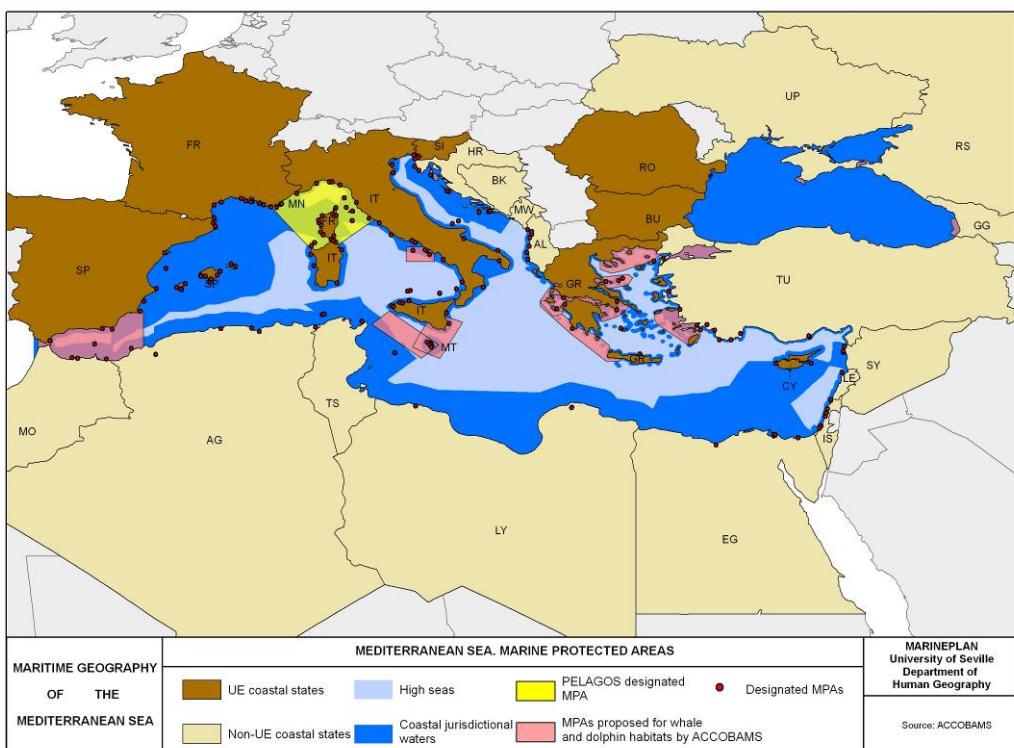

Map 57: Large Marine Ecosystems (NOAA)

Map 58: IHO Divisions in the Mediterranean and Black Seas

### Map 59: Marine protected areas

The scales of these areas and their average size vary greatly (Table 88). In some cases, such as the hydrographic basins, management institutions have been created and, in the case of the EU, the [Water Framework Directive](#) has included the related coastal waters within these physical units.

**Table 88: Management areas**

ECOSYSTEMS			
Waterfront Directive Ecoregions (WFDE)		Marine Ecoregions of the World (MEOW)

Source: Author.

Given that they are defined along lines of strictly functional geographic criteria, these areas generally tend to be of a supranational (straddling various national maritime jurisdictions) or international (including high seas waters) nature. This makes it difficult for such divisions, with boundaries based on hydrographic, geological or biological events, to become operational as they lack a legal-administrative framework. This is the difficulty that the establishment of protected marine areas comes up against when they cover waters that lie outside the national jurisdiction (Map 59).

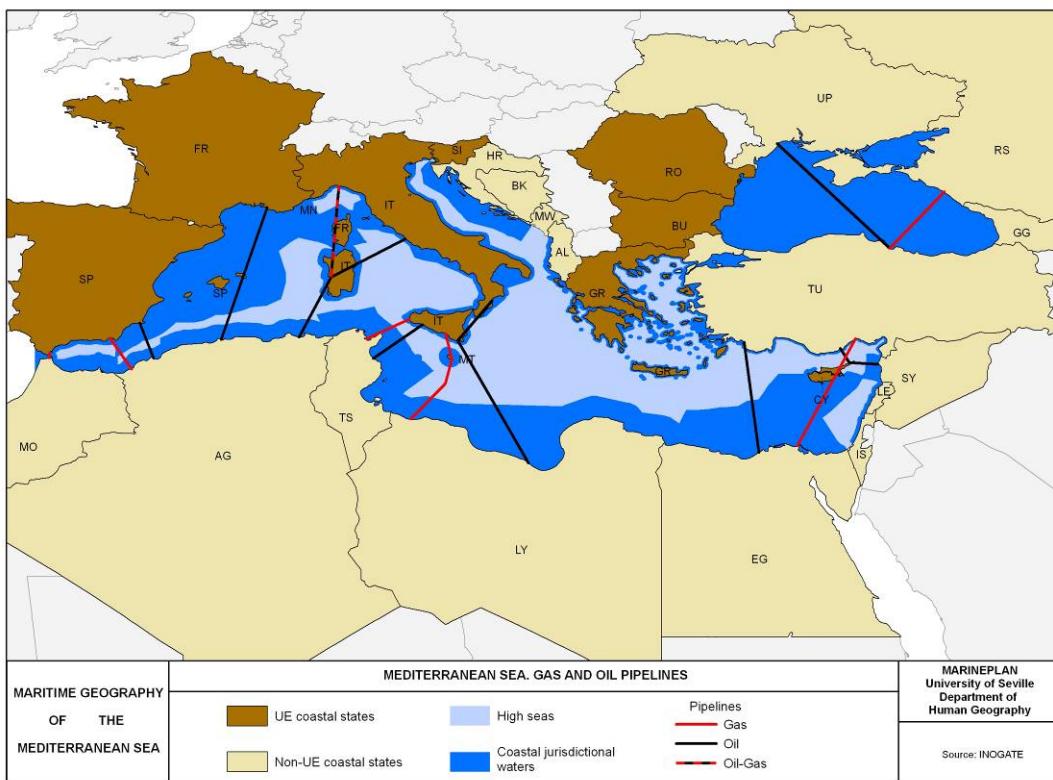

In addition, as has been indicated, some uses of the maritime space, such as navigation, are regulated by international agreements. On top of this, however, their environmental impact or the fact that they are superimposed on other uses or are competing for the same space means that they need to be taken into consideration when planning the maritime space. Such is the case of ports and shipping routes (Map 60), as well as particular strategic infrastructural works (Map 61).

Along with conventional uses, other phenomena such as unregulated migration have given rise to the establishment of control and monitoring systems for the maritime space. In some parts of the Mediterranean, this phenomenon has a notable impact and considerable resources are deployed in this regard (Map 62).

## ANNEX II. MAIN INTERNATIONAL AGREEMENTS ON THE MEDITERRANEAN AND BLACK SEAS<sup>23</sup>

The treaties described below are given according to the abbreviations used in Table 82.

- **1982 LOS Convention** - *United Nations Convention on the Law of the Sea* (Montego Bay, 12 December 1982), in force as from 16 November 1994: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Italy, Lebanon, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Tunisia, European Community. See <http://www.un.org/Depts/los/index.htm>
- **1995 SFS Agreement** - *United Nations Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks* (New York, 4 December 1995), in force as from 11 December 2001: Cyprus, France, Greece, Italy, Malta, Monaco, Slovenia, Spain, European Community. See <http://www.un.org/Depts/los/index.htm>
- **2001 UCH Convention** - *Convention on the Protection of the Underwater Cultural Heritage* (Paris, 2 November 2001), in force as from 2 January 2009: Croatia, Lebanon, Libya, Montenegro, Slovenia, Spain, Tunisia. See <http://portal.unesco.org/en>
- **1992 CBD** - *Convention on Biological Diversity* (Rio de Janeiro, 5 June 1992), in force as from 29 December 1993: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.cbd.int>
- **1979 CMS** - *Convention on Migratory Species* (Bonn, 23 June 1979): Albania, Algeria, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia, European Community. See <http://www.cms.int>
- **1979 Bern Convention** - *Convention on the Conservation of European Wildlife and Natural Habitats* (Bern, 19 September 1979), in force from 1 June 1982: Albania, Bosnia-Herzegovina, Croatia, Cyprus, France, Greece, Italy, Malta, Monaco, Morocco, Slovenia, Spain, Tunisia, Turkey, European Community. See <http://conventions.coe.int>
- **1974 SOLAS** - *International Convention for the Safety of Life at Sea* (1 November 1974), in force from 25 May 1980: Albania, Algeria, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey. See <http://www.imo.org>
- **1973/78 MARPOL** - *International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 relating thereto* (2 November 1973), in force from 2 October 1983: Albania, Algeria, Croatia, Cyprus, Egypt,

<sup>23</sup> European Commission, 2009, pp. 60-63.

France, Greece, Israel, Italy, Lebanon, Libya, 61 Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey. See <http://www.imo.org>

- **1989 Salvage** - *International Convention on Salvage* (28 April 1989), in force from 14 July 1996: Albania, Croatia, Egypt, France, Greece, Italy, Slovenia, Spain, Syria, Tunisia. See <http://www.imo.org>
- **1988 SUA** - *Convention for the Suppression of Unlawful Acts Against the Safety of Maritime Navigation* (10 March 1988), in force from 1 March 1992: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey. See <http://www.imo.org>
- **2000 Smuggling Prot.** - *Protocol against the Smuggling of Migrants by Land, Sea and Air, supplementing the United Nations Convention against Transnational Organized Crime* (New York, 15 November 2000), in force from 28 January 2004: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Tunisia, Turkey, European Community. See <http://www.unodc.org/unodc/index.html>
- **1976 Barcelona Conv.** - *Convention for the Protection of the Mediterranean Sea Against Pollution* (Barcelona, 16 February 1976), in force from 12 February 1978: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1995 Barcelona Amend.** - *Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean* (Barcelona, 16 February 1976 as amended 10 June 1995), in force from 2 July 2004: Albania, Algeria, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1976 Dumping Prot.** - *Protocol for the Prevention of Pollution of the Mediterranean Sea by Dumping from Ships and Aircraft* (Barcelona, 16 February 1976), in force from 12 February 1978: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1995 Dumping Prot.** - *Protocol for the Prevention of Pollution of the Mediterranean Sea by Dumping from Ships and Aircraft or Incineration at Sea* (Barcelona, 16 February 1976 as amended 10 June 1995), not yet in force: Albania, Croatia, Cyprus, Egypt, France, Italy, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1976 Emergency Prot.** - *Protocol concerning Co-operation in Combating Pollution of the Mediterranean Sea by Oil and other Harmful Substances in Cases of Emergency* (Barcelona, 16 February 1976), in force from 12 February 1978: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>

- **2002 Emergency Prot.** - *Protocol concerning Co-operation in Preventing Pollution from Ships and, in Cases of Emergency, Combating Pollution of the Mediterranean Sea* (Malta, 25 January 2002), in force from 17 March 2004: Croatia, Cyprus, France, Greece, Malta, Monaco, Montenegro, Slovenia, Turkey, European Community. See <http://www.unepmap.org>
- **1980 LBS Prot.** - *Protocol for the Protection of the Mediterranean Sea Against Pollution from Land-based Sources* (Athens, 17 May 1980), in force from 17 June 1983: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1996 LBS Prot.** - *Protocol for the Protection of the Mediterranean Sea Against Pollution from Land-based Sources and Activities* (Syracuse, 7 March 1996), in force from 11 May 2008: Albania, Croatia, Cyprus, France, Greece, Italy, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1982 SPA Prot.** - *Protocol Concerning Mediterranean Specially Protected Areas* (Geneva, 3 April 1982), in force from 23 March 1986: Albania, Algeria, Bosnia-Herzegovina, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1995 SPA Prot.** - *Protocol concerning Specially Protected Areas and Biological Diversity in the Mediterranean* (Barcelona, 10 June 1995), in force from 12 December 1999: Albania, Algeria, Croatia, Cyprus, Egypt, France, Italy, Malta, Monaco, Montenegro, Slovenia, Spain, Syria, Tunisia, Turkey, European Community. See <http://www.unepmap.org>
- **1994 Offshore Prot.** - Protocol for the Protection of the Mediterranean Sea Against Pollution Resulting from Exploration and Exploitation of the Continental Shelf and the Seabed and its Subsoil (Madrid, 14 October 1994), not yet in force: Albania, Cyprus, Morocco, Tunisia. See <http://www.unepmap.org>
- **1996 HW Prot.** - *Protocol on the Prevention of Pollution of the Mediterranean Sea by Transboundary Movements of Hazardous Wastes and their Disposal* (Izmir, 1 October 1996), in force from 28 December 2007: Albania, Malta, Montenegro, Morocco, Tunisia, Turkey. See <http://www.unepmap.org>
- **2008 ICZM Prot.** - *Protocol on Integrated Coastal Zone Management* (Madrid, 21 January 2008), not yet in force. See <http://www.unepmap.org>
- **1996 ACCOBAMS** - *Agreement on the Conservation of Cetaceans in the Black Sea, Mediterranean Sea and contiguous Atlantic Area* (Monaco, 24 November 1996), in force from 1 June 2001: Albania, Algeria, Croatia, Cyprus, France, Greece, Italy, Lebanon, Libya, Malta, Monaco, Morocco, Slovenia, Spain, Syria, Tunisia.
